Iraq, or Mesopotamia, "the land between the rivers" (Euphrates and Tigris), extends from Kurdistan* on N. and N.E. to the Persian Gulf on the S. and S.E., and from Persia on E. to Syria and the Arabian Desert on W. the approximate position being between 37½° to 48½° E. long., and from 37½° to 30° N. lat. The territory was freed from Turkish rule during the War of 1914-18 by Anglo-Indian and British Dominion troops under Generals Nixon, Maude, and Marshall (Gen. Maude succumbing to cholera after the capture of Baghdad). Under the Treaty of Peace with the Allies (1920) Turkey renounced the sovereignty over Mesopotamia and its future administration has been entrusted to Great Britain by the Supreme Council of the Allies. A provisional Arab Government was set-up by the High Commissioner in Nov., 1920, and in Aug., 1921, the Emir Feisal (son of the King of the Hedjaz) was elected King of Iraq, to be enthroned on Aug. 23, 1921. By Treaty between Great Britain and Iraq (Oct. 10, 1922) the former undertakes to exercise its good offices to secure the admission of Iraq to the League of Nations, and as soon as that admission has been accomplished all the responsibilities of Great Britain as the mandatory power will be terminated.

The total area of the districts comprised within the British Mandatory Sphere is about 150,000 sq. miles, the distance from Basra in the south to Mosul in the north being approximately 500 miles. The sphere comprises the former Turkish vilayets of Mosul, Baghdad and

* Kurdistan.—The mountainous tract inhabited by Kurdish tribes is to be formed into a separate autonomous province.

Basra. At the Census of 1920 the population was ascertained to be 2,849,282, as under :—

Baghdad vilayet	1,360,304
Basra vilayet	785,600
Mosul vilayet	703,378

Total 2,849,282

The *Baghdad* vilayet include the Baghdad, Samarra, Diyala, Kut, Diwaniyah, Shamiyah, Hillah and Dulaim Divisions; *Basra* vilayet include Basra, Amara and Muntafik; and *Mosul* include Mosul, Arbil, Kirkuk and Suleimani. (Mosul covers a great part of the ancient kingdom of *Assyria*, the ruins of the Assyrian capital being visible on the banks of the Tigris, opposite Mosul.)

Of the total population there were in 1920 1,146,685 Sunni Muhammadans, 1,494,015 Shiite Muhammadans, 87,488 Jews, 78,792 Christians, and 43,302 other religions.

Mesopotamia is capable of supporting a population many times in excess of its present inhabitants if irrigation is developed and extended. In 1908 certain works were undertaken, following on the report of Sir W. Willcocks, and since the British occupation notable improvements have been effected; the Irrigation Department is at present confining itself to small and immediately remunerative schemes. The wealth of the country depends entirely upon agricultural development, and two harvests can be gathered in the year, the chief crops being wheat, barley and beans, and rice, peas and Indian corn; wheat averages 464lb. per acre, barley 612lb., and rice over 1,000lb. In 1918-19 there were 1,547,000 acres (deriving their water from the Tigris and Euphrates) under general cultivation, an increase of 64 per cent. on the previous year. Cotton growing is a developing industry and it is estimated that Mesopotamia could yield 300,000 bales annually if sufficient labour is forthcoming. The country is being opened up and existing communications improved and secured. Schools, hospitals and dispensaries have been established under British auspices. Basra was equipped with wharves, railway sidings, &c., for military purposes, and is thus suited for commerce. The chief imports are textiles, sugar, and tea, and the chief exports are dates and piece goods.

The following table shows the approximate annual net revenue obtained by the Iraq Customs Administration during the years of British occupation :—

Financial Year.	Rupees.	£ sterling converted at 2s.4d.
1915-1916 ...	17,22,599	114,839
1916-1917 ...	53,78,600	358,573
1917-1918 ...	61,57,650	410,510
1918-1919 ...	58,25,000	388,333
1919-1920 ...	2,08,23,494	1,388,233
1920-1921 ...	2,13,94,320	1,426,288
1921-1922 ...	2,43,33,483	1,622,232

The *Euphrates* (which has a total length of 1,800 miles from its source to its outflow in the Persian Gulf) is formed by two arms, of which the Murad Su (415 miles) rises in the slopes of the Ala Dagh, a mountain of Eastern Erzerum, and flows westwards to a junction with the Kara Su, or Frat Su (275 miles), the latter rising in the north-west of Erzerum in the Dumlü Dagh. The *Tigris* has a total length of 1,150 miles from its source to its junction with the Euphrates at

Garmat Ali, 70 miles from the Persian Gulf, and rises in two arms south of the Taurus mountains, in Kurdistan, uniting at Til, where the boundaries of the vilayets of Diarbekir, Van and Bitlis conjoin.

The Baghdad Railway.—In 1899 the Anatolian Railway Company obtained a concession from the Sultan of Turkey for the construction of a railway from Konieh (the eastern terminus of the Anatolian Railway), to the Persian Gulf at Koweit, *via* Baghdad, a total length of 1,550 miles, with a single track of 4 ft. 8½ in. gauge. Its projected course was from Konieh to Adana, thence S.E. to Aleppo, Jerablus (where it would cross the Euphrates and enter Mesopotamia), and Mosul, and thence S. down the right bank of the Tigris to Baghdad and the Persian Gulf. As this scheme was under German control the British Government (on account of the paramount interests in the Persian Gulf of British India) declined to be a party to it, and a new financial scheme was substituted in which 40 per cent. of the capital was to be German and 20 per cent. French, while the Basra section of the line was to be under British control. The first section, Konieh-Eregli-Bulgurlu (124 miles), was opened in Oct. 1904, and at the outbreak of the War of 1914-18 about 1,200 miles (out of the total of 1,550 miles) were in operation, with gaps in important sections (notably in the hills N.W. of Aleppo, and in the Mesopotamian desert W. & S. of Mosul). The line crosses the Euphrates on a wooden bridge at Jerablus. At Aleppo there is a connexion with the Pilgrims' line from Medina (through Damascus and Homs to Aleppo) and, if it is completed, the railway will be served by the port of Alexandretta (Iskanderun) in Cilicia. The first through train from Basra to Baghdad left Basra on Jan. 13, 1920. The total length of line open at that date was 945 miles compared with 1,113 miles during the War, some unimportant lines having been disused since the cessation of hostilities with Turkey.

The chief city is Baghdad, the former capital of the Abbasside dynasty, one of the Caliphs of that dynasty being Haroun al Rashid of "the Arabian Nights." Baghdad has an estimated population of 170,000, other towns being Basra, 85,000, and Mosul (opposite the site of Nineveh), 90,000.

High Commissioner and Commander-in-Chief, Maj.-Gen. Sir P. Z. Cox, G.C.M.G., G.C.I.E., K.C.S.I.

Civil Secretary, C. C. Garbett, C.I.E.

Military Sec., Col. Gilbert R. Frith, C.B., C.M.G., D.S.O.

Oriental Secretary, Miss G. L. Bell, C.B.E.

Judicial Adviser, E. Drower.

Financial Adviser, S. H. Slater, C.I.E.

General Officer Commanding, Maj.-Gen. Sir Theodore Fraser, K.C.B., C.S.I., C.M.G.

CAPITAL, Baghdad.

Baghdad is 840 miles by air from Cairo, Egypt. Official Mails between London and Baghdad are sent by fortnightly Air Mail Service *via* Cairo—Heliopolis—Ramleh—Amman—Kasr Asrak—Ramadie, with a saving of about 14 days in transit over the normal service.

NIGERIA.

The Colony and Protectorate of Nigeria includes the territories situated on the Bight of Benin, between Dahomey on the west and the

Kameruns on the east. The Protectorate is in two main divisions, the Northern Provinces and the Southern Provinces, of which the northern group coincides with the former Protectorate of Northern Nigeria, and the southern group with the former Protectorate of Southern Nigeria. The headquarters of Government is at Lagos. The area of the whole territory is 336,000 sq. miles, and the population roughly 16,500,000.

The chief industry is agriculture, and crops consist of cotton, cocoa, ground-nuts, maize, guinea-corn, millet, rice, coffee, yams, cassava, and tobacco. The natural products exported are palm oil and kernels, gum copal, rubber, mahogany, shea-nuts, hides and skins, and the export of ground-nuts is steadily increasing. A considerable industry has arisen in connexion with tin-mining in the Northern Provinces. The Udi coalfields are of great extent and the coal is of excellent quality. A railway is in operation between Lagos and Kano, a distance of 705 miles. Branch lines run from Minna to Baro (on the Niger), and from Zaria to Bukuru. Another railway line runs from Port Harcourt, at the head of the Bonny estuary, to the coal fields at Udi (150 miles) and further railway extensions are in progress. Centres of trade are Lagos, Abeokuta, Ibadan, Oshogbo, Ilorin, Zaria, Kano, Onitsha, Lokoja, Warri, Bonny, Sapele, Calabar, Opobo, Forcados, and Port Harcourt.

The principal imports are cotton goods, provisions, spirits, hardware, cutlery, cycles, kerosene, tobacco, building material, soap, and haberdashery.

<i>Chief Engineer do., W. Cramer Bostock</i>	

Transit to Lagos from Liverpool, 16 days. Cable communication to Lagos and Bonny. Inland telegraphs to all important places.

NYASALAND PROTECTORATE.

This country was proclaimed a British Protectorate on May 14, 1891. The Protectorate comprises the western shore of Lake Nyasa and the country southwards nearly to the Zambesi.

The population of the Protectorate is 1,201,983, including 1,486 Europeans and 563 Asiatics, and it has a total area of 39,956 square miles.

The principal exports are cotton, tobacco, chillies, coffee, ground-nuts, fibre, and tea. The cultivation and export of cotton and tobacco are considerable. Ivory and rubber are also exported in small quantities. The principal imports are soft goods, provisions, and hardware. On Lake Nyasa there are seven steamers. There are also steamers on the Zambesi and Shire rivers plying between Chinde and the railway at Chindio. At Chinde, situated in Portuguese territory at the mouth of the Zambesi, is a piece of land leased from the Portuguese Government (known as the "British Concession") where goods intended for the Protectorate may be transhipped free of duty. A railway from Port Herald (the "inland port" of the Protectorate) to Blantyre (113 miles) is open for traffic. An extension from Port Herald to Chindio (the terminus of the Central Africa Railway) on the Zambesi (61 miles) was opened in 1915. The Trans-Zambesia Railway, from Beira to Mutarara (on the southern bank of the Zambesi River) was opened in April, 1922; the terminus is opposite to Chindio, and the line thus establishes direct railway communication between Beira and Blantyre. A further extension to Port Johnston, on Lake Nyasa, is projected. Main roads and "carrier" roads are open all over the Protectorate, the total mileage being 3,500.

Mails to and from England are despatched every week *via* Cape Town and Beira. Between Beira and Europe the means of communication are the Union-Castle Mail S.S. Co., Messrs. Rennie's Line *via* Natal, and the British India Steam Navigation Co. The Protectorate is connected by telegraph overland with the Cape *via* Salisbury, and, with the Portuguese wires, to Chinde and Quilimane. The African Trans-Continental Telegraph Company's line has now been extended northwards as far as Ujiji on Lake Tanganyika.

The chief towns are Blantyre (population about 300 Europeans and 7,000 natives) and Zomba, the headquarters of the Government.

PACIFIC ISLANDS.

High Commissioner, His Excellency Sir Cecil Hunter Rodwell, K.C.M.G.	£1,200
(In addition to £3,000 as Governor of Fiji, and allowance of £300 as Consul-General for Western Pacific.)	
Secretary to High Commission and Registrar of the Court, Roger Greene	£650
Chief Judicial Commissioner, Sir C. S. Davson, K.C., LL.B.	350
(In addition to £1,000 as C.J. of Fiji.)	

(1) *The British Solomon Islands*, protected since 1893, consist of Guadalcanar, Malaita, San Cristoval, New Georgia, Choiseul, Ysabel, and other islands situated east of New Guinea, with a total area of about 11,000 square miles, and a population, 1919, of 675 Europeans, 75 Asiatics, and about 150,000 natives. The Santa Cruz Group and several other islands were incorporated in the Protectorate in 1898 and 1899; and in 1900 Choiseul and Ysabel, with the islands in Bougainville Straits and Lord Howe's group, were transferred by treaty from Germany. The revenue in 1920-21 was £52,315, and the expenditure £41,662; exports, 1919-20, £212,542; imports, £181,162. The seat of government is Tulagi.

Resident Commissioner, R. R. Kane, M.C. (and £50 allowance) £800 to 1,000

(2) *The Gilbert and Ellice Islands*, formerly a Protectorate, were formally annexed to the Empire in November, 1915. The Gilbert Group, situated between 4° N. and 3° S. latitude and 172° and 177° W. longitude, consists of 16 islands, with several small islands or islets depending upon them; and the Ellice Group, between 5° S. and 10½° S. latitude and 176° E. and 179° 58' W. longitude, consists of nine islands. Ocean Island (or Paanopa), in lat. 0° 52' S. and long. 169° 35' E., which is the seat of government, was proclaimed British in 1900. Total area, 180 square

miles; population (1919), 200 Europeans, 300 Asiatics, and 33,500 natives. Revenue (1920-21), £54,979; expenditure, £45,379; imports (1919-20), £129,788; exports, £213,042. The Union or Tokelau Group, Fakaofu, Nukunono and Atafu, were included in the Protectorate in 1909, and annexed to H.M. Dominions in Feb. 1916 as part of the Gilbert and Ellice Islands colony, including Christmas Island.

Fanning Island, in lat. 3° 30' N., long. 150° 13' W., and Washington Island, 66 miles N.W. by W. of Fanning Island. Pop., 21 Europeans in connexion with Pacific cable station, and about 400 Gilbert Islanders in copra industry. The islands were included in the Gilbert and Ellice Colony by an Order in Council of Jan. 27, 1916.

Resident Commissioner, H. R. McClure ... (and £50 allowance) £700 to 800

(3) *The Tonga or Friendly Islands*.—A protectorate over the Tonga Islands Kingdom was proclaimed May 19, 1900. These islands are situated in the Southern Pacific to the E.S.E. of Fiji, and 390 miles therefrom, with an area of 385 square miles, and a population (1919) of 376 Europeans, 250 half-castes, 22,689 Tongans, and 247 others—total 23,562. The limits of the group are between 15° and 23° 30' S. and 173° and 177° W. Nukualofa, on the island of Tongatabu, is the seat of government. The present queen (Salote) succeeded the late King George Tubou II. in 1918. Soil generally is fertile; the principal export is copra. Two of the smaller islands disappeared owing to a tidal wave, in June, 1919. Revenue, 1920-21, £90,764; expenditure £66,511; imports (1918), £177,151; exports, £169,757. The total shipping entered and cleared in 1917 was 47,180 tons, all of which was British.

Agent and Consul, Islay McOwan £800 (and entertainment allowance £100)

(4) *The Phoenix Islands* (McKean, Gardner Birnie, Hull, Enderbury, Phoenix, Canton, and Sidney), between 2° 30' and 4° 30' S. and 171° and 174° W.

(5) *Pitcairn Island*, situate in lat. 25° 3' 30" S., long. 130° 8' 30" W. Pop. (April, 1907), 144. descendants of the mutineers of H.M.S. *Bounty*. Arrowroot is manufactured and exported.

Deputy Commissioner, Dr. W. J. Williams (H.M. acting Consul for the Society Islands). Chief Magistrate, Fred Christian.

(6) *The New Hebrides Group* lies roughly 500 miles west of Fiji and 250 miles north-east of New Caledonia. In 1906 a Convention was signed under which the administration of the group was assumed by Great Britain and France. British and French Resident Commissioners were appointed in 1902. Nat. pop. about 58,700, European 946. Principal exports, maize, copra, cotton, and coffee. A British steamer runs regularly between Sydney and the group, and French steamers from Sydney and New Caledonia.

French High Commissioner, J. Repiquet (Governor of New Caledonia).

British Resident Commissioner, M. King, C.M.G.	£940
French Resident Commissioner, M. d'Arbousier. President of Joint Court, Count de Buena Esperanza	£1,200
British Judge, R. S. de Vere.	

(7) There are also a large number of scattered groups and isolated islands.

PALESTINE.

Palestine, extending from the Mediterranean on W. to an eastern boundary formed by the Wady Arabah, Dead Sea, River Jordan and Sea of Tiberias, and from the Egyptian frontier on S. to the French Mandatory Sphere of the Great Lebanon on N., includes, in addition, a large area E. of the Jordan and S. of the Yarmuk.*

Palestine is under British administration since the conquest of the country by the forces of General Allenby in 1918, and consists of a W. maritime lowland, the mountain region of Judah (which forms the backbone of the district) and, on the E., the depression through which the Jordan winds its way from the Sea of Galilee (Tiberias) to the Dead Sea. The *Dead Sea*, 1,292 feet below the level of the Mediterranean, is 46 miles long and has an average width of 8½ miles; it receives the waters of the Jordan and of six other rivers, and has no outlet, the surplus being carried off by evaporation. Its water is intensely salt and has a specific gravity one-sixth greater than water, with 24 per cent. of salt. (The Great Salt Lake of Utah, U.S.A., is 80 miles long and 30 miles wide, at 4,218 feet above mean sea level, and contains 25 per cent. of salt.) The area of Palestine W. of the Jordan is about 9,000 square miles, with a population (Jan. 1, 1922), of about 762,000, of whom 585,000 are Muhammadans, 88,000 Christians, 81,000 Jews, and 7,000 members of other faiths. Since 1919 about 30,000 immigrants (mostly Jews) have settled in the country.

Palestine is divided into 7 administrative districts, under District Governors. English, Arabic and Hebrew are the official languages of the country. The chief town, *Jerusalem*, had been in Moslem hands since 1244, and under Turkish rule since 1517, until it surrendered to General Allenby on Dec. 9, 1917, to be entered the next day by British troops. The city, which occupies so prominent a place in the affections of the Jewish, Christian and Muhammadan peoples, had a population in Jan., 1922, of 64,000. The Church of the Holy Sepulchre at Jerusalem is visited annually by large bands of Christian pilgrims, principally of the Orthodox and Coptic churches. The site of Solomon's Temple is occupied by the Dome of the Rock, sometimes erroneously called the Mosque of Omar, which contains a relic of Mahomet and the sacrificial stone of Abraham. *Bethlehem*, the scene of Christ's Nativity, is 5 miles S. of Jerusalem. The Church of the Nativity, at the E. end of the present village, is reputed to be the oldest Christian church in existence. King David was also born in Bethlehem. *Nazareth*, about 25 miles S.W. of the Sea of Galilee, had a population of 9,510 in 1922. Other large towns are Jaffa (45,100), Gaza (14,981), Acre (4,100), and Haifa (34,100).

The railway system of Palestine consists of five sections: *Rafa-Haifa*, continuing southward to Kantara to join up with the railways of Egypt, passengers and freight being transported across the Suez Canal at Kantara; *Haifa-Acre-Semakh*, continuing beyond Semakh to Damascus in the French mandatory territory of Syria; *Jaffa-Ludd-Jerusalem*; *Rafa-Beersheba*; and

Afula-Tulkaram. The main junction of the Government Railways is at Ludd, the general offices being at Haifa.

The chief ports are Jaffa, Haifa and Acre. There are branches of the Anglo Egyptian, Anglo-Palestine, Banco di Roma, Credit Lyonnais, and Imperial Ottoman Bank in the main towns.

Although economic conditions are still primitive, modern methods are making headway, and there are good prospects of development and progress. The country is generally fertile, and cereals, wine, olives and various fruits are produced, while sheep and goats thrive in the lowlands, and in the mountains in time of drought. The imports in the year ending March 31, 1922, were valued at £E5,645,000 and the exports at £E935,000.

CAPITAL, Jerusalem.

British High Commissioner, Rt. Hon. Sir Herbert Samuel, P.C., G.B.E. (b. 1870). 1920.....£4,000 A.D.C., Capt. L. G. A. Cust.

ST. HELENA,

probably the best known of all the solitary islands in the world, is situated in the South Atlantic Ocean, 955 miles S. of the Equator, 760 S.E. of Ascension, 1,140 from the nearest point of the African Continent, 1,800 from the coast of S. America and 4,477 from Southampton, in 15° 55' S. lat. and 5° 42' W. long. It is 10½ miles long, 6½ broad, and encloses an area of 47 square miles, with a population (Census 1911) of 3,520. St. Helena is of volcanic origin, and consists of numerous rugged mountains, the highest rising to 2,700 feet, interspersed with picturesque ravines. The climate vies with that of Madeira in point of salubrity and evenness of temperature. Although within the tropics, the south-east "trades" keep the temperature mild and equable. The thermometer goes up to 84° in the town at the sea-level; but in the country, 1,800 feet above the sea, the maximum is about 74°, and the mean temperature ranges from 57° in September to 65°

* *Transjordan or Kerak*.—The country beyond the Jordan is under the provisional government of the Emir Abdullah (brother of the Emir Feisal, King of Iraq), assisted by British advisers. It has been excluded by Proclamation (Sept. 1, 1922) from the application of the Palestine Order in Council, 1922.

in March, there being very little difference between night and day; the lowest temperature in winter is 51°, and the total rainfall (1921) 40·5 inches. St. Helena was discovered by the Portuguese navigator, Juan de Nova Castella, on May 21, 1502 (St. Helena's Day), and remained unknown to other European nations until 1588. It remained uninhabited until the Dutch colonised it *circa* 1645. The English East India Company seized it in 1651; but it was retaken by the Dutch in 1672. In 1673 it was again taken from the Dutch and was held by the Company, who had obtained a charter for its possession from Charles II., until 1834 (with the exception of the period 1815 to 1821, during which the British Government held it as a residence for the Emperor Napoleon, who died there May 5, 1821), when it was ceded by them to the Crown. It was formerly an important station on the route to India, but its prosperity decreased after the cutting of the Suez Canal. A phormium (flax fibre) and lace-making industry have been established. St. James's Bay, on the north-west of the island, possesses a good anchorage.

The government is administered by a Governor, with the aid of an Executive Council of 4 members, the Governor alone making all ordinances.

Sarawak is a state on the north-west coast of the island of Borneo, with a seaboard of 400 miles, an area of about 42,000 square miles, and a population of about 600,000, composed of various races. The territory of the Raja of Sarawak extends from Cape Datu in the south to the Lawas District, where it touches the boundary of British North Borneo. The southern boundary is formed by three ranges, the Serang, Kelingang, and Batang-Lupar mountains; the eastern boundary is a broken range of mountains with peaks rising to 10,000 feet. The principal rivers are the Rejang (navigable for about 160 miles), the Baram (navigable for about 100 miles), the Batang-Lupar, and the Limbang. Kuching, the capital, stands on a small river (the Sarawak) which is navigable from its mouth to Kuching (20 miles). The government consists of a hereditary sovereign and a Supreme Council of 9 (4 Europeans and 5 Malay magistrates), and a General Council of 50, composed of European and Malay officials and native chiefs, meeting every 3 years. The civil service is composed of English officials to the number of 50, appointed by the sovereign. The government of Sarawak was obtained in 1842 from the Sultan of Borneo by the late Sir James Brooke, who became well known as Rajah Brooke of Sarawak. Other concessions have been made in 1861, 1882, 1884, and 1890, when the Limbang River was obtained. The Lawas River was added in 1904. The country produces sago, gutta-percha, india-rubber, beeswax, birds'-nests, oil, gold, silver, diamonds, antimony, quicksilver, tobacco, rice, rattans, coal, gambier, and pepper. A large petroleum field has been discovered at Miri and Bakong, in the Baram district, and is now a valuable asset. Gold exports, (1920) \$612,000; (1921) \$559,190. Oil exports, (1920) 98,926 tons; (1921) 170,271 tons.

	1919.	1920.	1921.
Revenue	\$2,531,240	\$2,645,265	\$2,840,171
Expenditure	1,721,908	2,352,300	2,331,605
Imports	20,265,281	19,858,700	15,248,749
Exports	23,957,953	22,388,074	18,454,592

CHIEF TOWN, Kuching. Population (1921), 30,000. Distance from London, 8,700 miles; transit, 25 to 30 days. Kuching, Sadong, Sibn, and Miri are in wireless communication with Singapore. Steamer leaves Singapore for Kuching and Kuching for Singapore every Tuesday in normal times, a temporary service being now maintained 3 times a month. There is also direct communication with Sibn and Miri.

SEYCHELLES.

The Seychelles Islands, in the Indian Ocean, which number altogether 90, were occupied by the French about 1742, captured by a British ship in 1794, and were finally assigned to Great Britain in

1814. By letters patent of Sept. 1903 they were erected into a separate colony. The principal islands of the group are Mahé, Praslin, Silhouette, Curieuse, and La Digue, and the total area of the islands, with dependencies, is estimated at 156 square miles, of which Mahé occupies nearly 56 square miles. The population of all the islands (Census 1921) was 24,523 (Mahé 19,426, Praslin 1,999, La Digue 1,303, other islands 1,795), an increase since the Census of 1911 of 1,832. Victoria, the capital, on the N.E. side of Mahé, has an excellent harbour; it is an Admiralty coaling station. Although only 4° 8. of the Equator, the islands are very healthy, the death-rate in 1921 being 15.08 per 1,000. There are 19 Roman Catholic and Church of England primary schools; there are also 2 secondary schools.

The principal exports are copra, vanilla, coconuts, coco-nut oil, tortoise-shell, cinnamon, essential oils, soap, and guano. Aldabra, one of the dependencies of the Seychelles, and about 680 miles from Mahé, is famous for the gigantic land tortoises, whilst the unique double coco-nut, *Coco de Mer*, is found in Mahé, and, in larger quantities, in Praslin, where there is a famous valley. The Governor is assisted by an Executive Council of 3 members (2 *ex-officio* and 1 nominated), and by a Legislative Council of 3 official and 3 unofficial members.

SIERRA LEONE.

The peninsula of Sierra Leone, situated on the West Coast of Africa, was ceded to Great Britain in 1787 by the native chiefs for the purpose of being used as an asylum for the many destitute negroes then in England. At a somewhat later date the Colony was used as a settlement for Africans from North America and the West Indies, and great numbers of Africans rescued

from slave ships have from time to time been liberated and settled there. The Colony has a coast-line of 210 miles, with an estimated area of 4,000 square miles. In 1921 its population was 85,163, of whom 1,161 were resident Europeans. Of the rest, more than half are the descendants of liberated Africans, while the remainder belong to the neighbouring tribes. A babel of tongues is thus to be heard in the streets of Freetown. In 1896 a Protectorate was declared over the territory adjoining the Colony to the northward and eastward. The extreme depth of the Protectorate from north to south is about 210 miles, lying between 7° and 10° N. lat., and the extreme breadth from east to west is 180 miles, between 10° 40' and 13° 21' of W. long. Its estimated area is 27,000 sq. miles, and its population about 1,456,148. For administrative purposes it is divided into 3 Provinces, under Provincial Commissioners, assisted by 10 District (and 14 Assistant District) Commissioners. The principal peoples are the Limbas and Korankos in the north, the Temnes in the centre, and the Mendis in the south.

The principal exports are palm kernels, kola nuts, and palm oil; but ginger, piassava, hides, and rice are also exported. The value of the palm kernels exported in 1921 reached £685,069. The chief imports are cotton goods, coal, apparel, hardware, provisions, and tobacco. Freetown, the capital, possesses the finest and most important harbour in West Africa.

A railway runs inland from Freetown to Pendembu, a distance of 227½ miles, and a branch line 104 miles in length extends in a north-easterly direction from Boia to Kamabai. By the extension of the railway and the development of a system of roads in the Protectorate, it is estimated that the output of Sierra Leone products into the European market is capable of being more than doubled. There are 827 miles of combined telegraph and telephone service.

Sierra Leone is a Crown Colony, possessing a Legislative Council nominated by the Crown, and having full power to legislate for the Protectorate as well as for the Colony. The Governor is advised by an Executive Council.

SOMALILAND.

(The Somaliland Protectorate.)

In 1884 a Protectorate was declared over part of Somaliland, a region where the coast is divided between Great Britain, France and Italy, while the interior is subject to Abyssinia, and forming the north-eastern horn of the African continent. The British Protectorate contains about 68,000 sq. miles. The population, mainly consisting of Somalis, a Muhammadan people, is estimated at 300,000. The boundaries are defined by treaties with Abyssinia, France and Italy; the northern coast as far as 49° E. and the 8th parallel of N. latitude are the limits on the north and south. The Protectorate garrison is now confined to a Camel Corps, 400 strong, the Dervish power having been finally broken in 1920. The chief products of Somaliland are cattle, sheep, goats, hides, skins and gum. There is wireless communication with Aden. The Protectorate was transferred to the administration of the Colonial Office on April 1, 1905.

SOUTH AFRICAN HIGH COMMISSION.

<i>High Commissioner for South Africa, Major-General H.R.H. Prince Arthur of Connaught, K.G., K.T., G.O.M.G., G.C.V.O., C.B., A.D.C. (also receives £10,000 as Governor-General of the Union of South Africa)</i>	£3,000
<i>Imperial Secretary and Accountant, H. J. Stanley, C.M.G.</i>	1,700
<i>Asst. Imperial Secretary, C. L. O'B. Dutton</i>	900
<i>Chief Clerk, Shirley Eales</i>	830
<i>Resident Commissioner, Southern and Northern Rhodesia, C. D. Douglas-Jones, C.M.G.</i>	1,800
<i>Private Secretary, F. J. Rosselli.</i>	

* Inclusive of allowances.

The High Commission.—The office of High Commissioner, which was formerly combined with the Governorship of Cape Colony, was by a Commission issued in 1900 vested in Lord Milner; by a similar Commission issued in 1905 in Lord Selborne; since 1910 it has been vested by a separate commission in the successive holders of the office of Governor-General of the Union of South Africa. The High Commissioner is Governor of Basutoland, and supervises the affairs of the Bechuanaland Protectorate and of Swaziland, and he exercises the control provided by Order in Council over the Administration of the British South Africa Company in Southern and Northern Rhodesia. The Southern Rhodesia Order in Council, 1898, and the Northern Rhodesia Order in Council, 1911, provide respectively for a control by the High Commissioner over legisla- tion, important appointments, and Native Affairs in Southern and Northern Rhodesia, and for the appointment of a Resident Commissioner, who is paid from Imperial funds and acts as the local representative of the High Commissioner and the Imperial Government.

BASUTOLAND.

(The Territory of Basutoland.)

Basutoland is an inland Native Territory of South Africa, bounded North and West by Orange Free State, East by Natal, and South by Cape Colony, with an area of 11,716 square miles. The Census of 1921 showed 495,937 natives and 1,603 whites, 1,069 coloured and 172 Asiatics.

The territory is well watered, and enjoys a good climate. It is one of the finest grain producing districts in South Africa, and the abundant grass enables the Basuto to rear immense herds of cattle. The Maluti Mountains, forming a part of the great Drakensberg chain, occupy most of the country, which is elevated, broken, and rugged.

The territory is governed by a Resident Commissioner under the direction of the High Commissioner for South Africa, the latter possessing the legislative authority which is exercised by proclamation. The chiefs adjudicate on cases between natives, with a right of appeal to the magistrates' courts, where all cases between Europeans and natives are brought. The revenue is derived from Customs, native tax, income tax on Europeans, Post-office, and licences. Tele- graph offices have been opened at Leribe, Maseru, Teyateyaneng, Morija, Mafeteng, Molehe, the Hoek, Quthing and Qacha's Nek. There are 451 native schools, with over 31,511 native scholars on the roll, a large proportion being in the schools of the French Protestant Mission; there are also 6 white schools, with 121 pupils. The amount spent on education in 1921-22 was £35,301. The chief articles of export are grain, wool, cattle, and horses, the imports being chiefly blankets, hardware, and groceries.

	1919-20.	1920-21.	1921-22.

Maseru is distant from London 7,668 miles;	
transit, through the Cape, about 20 days.	

BECHUANALAND.

(The Bechuanaland Protectorate.)

The Bechuanaland Protectorate is a country of British South Africa, in the centre of the vast tableland stretching north to the Zambesi.

The Protectorate is bounded on the south and east by the Cape and Transvaal Provinces of the Union, on the north and north-east by Rhodesia, Southern Rhodesia, the Zambesi and Chobe (Linyanti) Rivers, and on the west by South-West Africa. It is about 500 miles long and 550 miles broad, with a total area of about 275,000 square miles; the *Caprivi Zipfel* was attached to the Protectorate for administrative purposes by Proclamation (1922). The population at the Census of May, 1921, was 152,983, of whom 1,743 were Whites, 52 Indians, 1,003 Coloured and 150,185 Natives.

The climate is healthy during part of the year, but malarial fever is prevalent during February, March, and April. The country is essentially pastoral, although Kaffir corn, mealies, beans, pumpkins and melons are sown, and when the rainfall is adequate crops are reaped. Cattle thrive, and numbered 426,344 at the Census of 1921. Much of the country is thick bush. The High Commissioner for South Africa has the power of making laws by proclamation for the Protectorate, where he is represented by a Resident Commissioner. The population is almost entirely a native one, the principal tribes being those of Khama (Bamangwato), of Linchwe (Bakgatla), of Sebele II. (Bakwena), of Tshosa (Bangwaketsi), of Seboko Mokgosi (Bamalete), and of Mathibe (Batawana).

The railway from Kimberley to Vryburg and Mafeking traverses the Protectorate on its way to Rhodesia. There is a telegraph line from Cape Province through from Mafeking, *via* Gaborones and Francistown, to Bulawayo and Salisbury. The chief European centres are Lobatsi, Gaborones, Francistown, and Serowe, whither the Chief (Khama) and all his people moved in 1901 from Palapye. The headquarters of the Protectorate Administration are at Mafeking, Cape Province.

Administrator, Southern Rhodesia (Salisbury),

Northern Rhodesia (Livingstone), Sir Drum-
mond Chaplin, K.C.M.G.

Deputy Administrator, Northern Rhodesia,
R. A. J. Goode, C.B.E.

Resident Commissioner for Southern and North-
ern Rhodesia, C. Douglas-Jones, C.M.G., Salis-
bury.

Commandant General Rhodesian Forces, Maj.-
Gen. Sir A. H. M. Edwards, K.B.E., C.B., M.V.O.

AREA AND POPULATION.

	Sq. m.	Pop.
Southern Rhodesia (Salisbury)	149,000	899,187
Northern Rhodesia (Livingstone)	291,000	983,539

The total area of Rhodesia is about 440,000 square miles and the total population is 1,882,726 (1921). The territory is named after Cecil Rhodes, the founder of the British South Africa Company, and extends from Lake Tanganyika and the Congo watershed in the north, to the Limpopo River in the south.

COMMUNICATIONS.

Railways.—The main arteries of communication are the Rhodesia and the Mashonaland Railways. The former is a continuation of the line from Cape Town to Vryburg, *via* Kimberley, and was opened to Bulawayo in November, 1897, the distance from Cape Town being 1,362 miles. A line connecting Bulawayo with Salisbury (301 miles) was completed in Oct. 1902. From Salisbury the Mashonaland Railway runs eastwards to Umtali and is continued by the Beira Railway Companies to the port of

Beira (Portuguese), a total distance of 374 miles. The section from Bulawayo *via* the Wankie coal-fields to the Victoria Falls (282 miles) was completed in June, 1904. The line crosses the Zambesi at the Victoria Falls, traverses Northern Rhodesia, and, crossing the border (507 miles), extends a further 450 miles *via* Kambove to Bukama, in the Belgian Congo State. A branch line of standard gauge (3 ft. 6 in.) runs from Salisbury to the Eldorado mine (78 miles), and has been extended to Sinoia (4 miles). A standard-gauge line leaves the Eldorado branch at Mt. Hampden Junction (13 miles from Salisbury) for the Shamva mines (73 miles). A line connects Gwelo with Selukwe (24 miles); another runs from Bulawayo *via* Gwanda to West Nicholson (104 miles), opening up the mining district to the south-east; another connects Bulawayo with the Matopo Hills, where the founder of Rhodesia and Sir Starr Jameson are buried, and a branch line from Gwelo to Umvuma has been extended to Fort Victoria (123 miles).

Telegraphs.—The African Transcontinental Telegraph Line ("Cape to Cairo") has been constructed as far as Ujiji in East Africa, about 3,250 miles from the Cape.

SOUTHERN RHODESIA.*

Area and Population.—The total area is 149,000 square miles, and the population (1921) 899,187, of whom 33,620 are Europeans. The native population is 862,319, with 3,248 Asiatics and other coloured persons, including those of mixed race.

Constitution.—Southern Rhodesia is administered by the Company under the Charter of 1889, amplified from time to time by Orders in Council. The Administrator is advised by an Executive Council consisting of the Resident Commissioner and not less than three members, appointed by the Company with the approval of the Secretary of State for the Colonies. There is a Legislative Council consisting of the Administrator, the Resident Commissioner (*ex officio*), and 19 members, of whom six are nominated by the Company with approval of Secretary of State, and 13 are elected by the registered voters. A Supplemental Charter was issued on March 13, 1915, giving effect to the arrangement to which the Directors of the Company had agreed to render possible the establishment of Responsible Government in Southern Rhodesia, should the Legislative Council desire it, and should H.M. Government concur at some date other than that the Charter permits.

The laws in force in the Cape Colony up to June 10, 1891, were adopted for Southern Rhodesia, so far as they are applicable. Subsequent legislation has been by proclamation of the High Commissioner and by ordinances passed by the Legislative Council. Municipal self-government has been established in Salisbury, Bulawayo, Gwelo, Umtali, and Gatooma.

Industrial Progress.—Southern Rhodesia is rich in mineral deposits, and it abounds in traces of the ancient gold-workers. Though the climate is sub-tropical, the average altitude makes it well suited for European occupation, and for the cultivation of European fruit-trees, cereals, and

vegetables, in addition to tobacco and the indigenous products of the country. The local breeds of cattle are constantly being improved by importation of pedigree stock.

The first regular crushing returns began in September, 1898, and the gold produced to December 31, 1921, was of the value of £51,501,615. The output for the year ended December 31, 1921, was valued at £3,217,275. Silver, copper, coal, diamonds, lead, chrome iron, asbestos, and other minerals have also been produced in considerable quantities.

Administrative revenue, 1921-22	£1,484,813
Administrative expenditure, 1921-22	1,349,790
Imports, 1921	5,443,123
Exports, 1921	4,298,912
Imports from U.K., 1921	2,510,633
Exports to U.K., 1921	2,981,854

SALISBURY, the seat of government, is situated on the Mashonaland plateau, 4,880 ft. above sea-level (white population, census, 1921, 5,134). BULAWAYO, the largest town in Matabeleland, 4,460 ft. above the sea-level, had a white population of 7,462 (1921).

NORTHERN RHODESIA.

This territory, a large portion of which was first opened to British influence by David Livingstone, is partly occupied by the native tribes living under their own chiefs, but large tracts are being opened up for European settlement. Over 1,000,000 acres of land are under settlement by white farmers, whose operations are chiefly stock-raising; over 65,000 head of cattle are being grazed by them. Extensive mineral deposits, copper in particular, have been discovered. Indigenous rubber is found in large areas. The country is well timbered, and well watered by the Zambesi and Kafue rivers and their affluents. There are large herds of native cattle (257,000 in 1921). Game is also abundant.

The total area is about 291,000 sq. miles, and the population in 1921 was 983,539, of whom 3,624 were Europeans.

Administrative revenue, 1920-21	£235,403
Administrative expenditure, 1920-21 ...	363,518

SWAZILAND.

(The Swaziland Protectorate.)

Swaziland (called by the natives Kwa Ngwane) lies between the Drakensberg and Lebombo Mountains in British South Africa. The Transvaal Province forms a boundary on the south, west and north, the eastern boundary being Zululand (Province of Natal), and the Portuguese province of Mozambique (Delagoa Bay). By the Convention of 1894, Swaziland was placed under the administration of, but not incorporated with, the South African Republic; the British Government now controls the Territory. The total area is 6,678 square miles, and the population (1921) 112,951, of whom 2,205 are whites, the remainder being Ama-Swazi Bantus (or Swazis). Swaziland is divisible into three longitudinal regions: the mountainous regions of the west, with an approximate altitude exceeding 4,000 feet; the Middle Veld, about 2,000 feet lower; and the Low Veld, bounded on the east by the Lebombo Mountains, with an average altitude not exceeding 1,000 feet. Except in the Low Veld the country is well watered and healthy.

A Special Court having the full jurisdiction of a Supreme Court, and Courts of Assistant Commissioners having a restricted jurisdiction, have been established. Native chiefs

* In Oct., 1922, the people of Southern Rhodesia were invited to record their votes for Responsible Government or for incorporation in the Union of South Africa. The result of the plebiscite was *For Responsible Government*, 2,774 *For Incorporation*, 5,989: Majority *For Responsible Government*, 2,785.

continue to exercise jurisdiction according to native law and custom in civil disputes between natives, subject to a final appeal to the Resident Commissioner. The Paramount Chief is Sobhuza, son of the late Paramount Chief Bunu.

The numerous mineral and land concessions and monopolies granted by Mbandeni, of which many of the latter carried exemption from Customs dues or invested private individuals with powers properly exercisable by the Crown, rendered satisfactory government difficult. A Commission was therefore appointed under Proclamation to inquire into these concessions and monopolies, and those conferring exclusive rights have been expropriated, compensation being made out of loans raised for the purpose. The Commission also determined the validity and extent of all concessions, and the agricultural and grazing rights of the natives have been fully safeguarded. A general survey of the country took place in connexion with the work of the Concessions Commission and the Special Commissioner.

The soil is generally fertile, particularly so in the Low and Middle Veld. The whole of the Territory forms excellent grazing for cattle, and cattle-ranching on a large scale has been commenced by several companies. There were about 230,000 head of cattle in the Territory at the end of March, 1922.

In the winter season between 250,000 and 300,000 sheep are brought to Swaziland for grazing from the high table-lands of the Eastern Transvaal. The agricultural products are tobacco, maize (the staple product), millet, pumpkins, ground-nuts, beans, and sweet potatoes, grown in insufficient quantities to meet local requirements. Most of the sub-tropical fruits can be grown with success. Large areas of land are suitable for growing cotton, coffee, and tea. The country possesses considerable mineral wealth, including gold, tin, coal, and copper. During the year ended Dec. 31, 1921, 391 tons of cassiterite tin, valued at £29,767, were exported; a few gold mines were being worked on a small scale.

Mbabane, the headquarters of the Administration, is situated on the hills at an altitude of 4,000 feet. At each of the district headquarters—Hlatikulu, Stegi, and Pigg's Peak—there is a small number of Europeans in the vicinity of the station, likewise at Bremersdorp, the old headquarters of the Territory. There are eleven schools for Europeans at various centres; and the Government has established a school for natives at Zombode, at which, until recently, the young Paramount Chief (Sobhuza) attended. There is also a school for coloured children. Grants are also made to the various native missions for educational purposes.

There is a tri-weekly communication by motor-car between Mbabane and Carolina (82 miles) and between Mbabane and Bremersdorp (23 miles). Elsewhere the communication is by cart or runners. There are 14 post offices, and a telegraph office at Mbabane, Pigg's Peak, Bremersdorp, and Ezulweni.

	1919-20.	1920-21.	1921-22.
Revenue	£91,801	£88,372	£87,104

Deputy Resident Commissioner and Government Secretary, B. Nicholson, D.S.O., M.C.

THE SUDAN.

The Sudan extends from the southern boundary of Egypt, 22° N. lat., to the northern shore of the Albert Nyanza, 2° 19' N. lat., and reaches from the French Sahara about 18° 15' E. (at 22° N.) to the north-west boundary of Eritrea (Italian) in 38° 30' E. (at 18° N.). The greatest length from north to south is approximately 1,400 miles, and from east to west 1,200 miles. The northern boundary is the 22nd parallel of North latitude; on the east lie the Red Sea, Eritrea and Abyssinia; on the south lie the British Protectorate of Uganda and the Belgian Congo; and on the west the French Congo. The total area is about 1,014,600 sq. miles, with a population of about 4,000,000, partly Arabs, partly Negroes, and partly Nubian of mixed Arab-Negro blood, with a small foreign element, including some 3,000 Europeans. The Arabs and Nubians are all Muhammadans, as are some of the Negroes, but the latter are generally pagans. Before 1894 the population was believed to be between 8,000,000 and 10,000,000, but by 1898 they had been reduced to about 1,500,000 by war, repression, and disease.

Northern Region.—The greater portion of the region between 16° N. and 22° N. consists of the Nubian Desert on the east and the Libyan Desert on the west, divided by the fertile valley of the Nile, which is nowhere of great width. The Nubian Desert is bounded on the south by the rivers Atbara and Gash, the latter of which loses its annual flood in a fertile delta north of the town of Kassala. It is traversed from south to north by the continuation of the Abyssinian highlands, which constitutes the Nile-Red Sea water parting, and forms a series of parallel rocky ranges rising to a height of 5,000 feet, the lower slopes and valleys of which are clothed in vegetation and comparatively well watered. The maritime plain lying between these mountains and the Red Sea is covered with low bush, and at Tokar the Baraka (a mountain torrent) waters sufficient of it to produce excellent cotton.

The Central Region, between 16° N. and 10° N., contains on the east the so-called "Island of Meroë," the ancient seat of civilisation in the Sudan, situated between the Atbara and the Blue Nile Rivers. It is now almost uninhabited save for the natives who visit it with their herds, and to raise a precarious crop after the annual rains. The districts bordering on the upper reaches of the Blue Nile are covered with forests of large trees.

Southern Region.—From 10° N. to the southern boundaries are extensive tracts of cultivable lands enclosed by a semi-circle of forests and swamps, through which a multitude of streams flow into the main river.

Darfur is mainly an elevated plateau about 3,000 feet above sea level, with occasional summits in the Jebel Marra and Jebel Medob of 6,000 feet, one peak (Jebel Marra) rising to a height of approximately 10,000 feet, with summer torrents in the *khors*, which flood much of the southern districts and vanish in the winter. The *Lado* *enclave*, which had been leased to Leopold II., King of the Belgians, reverted at his death to the Sudan administration, and now forms part of Mongalla. The total area of the *enclave* is estimated at 15,000 sq. miles, with a Negro population of about 250,000. The *Gambela* *enclave* (within the boundaries of Abyssinia) is leased

from the Abyssinian Government as a trading post.

Hydrography.—The Nile basin covers a total area of nearly 1,100,000 sq. miles, and while part of the basin lies in Abyssinia and Eritrea, its course from the Central African Lakes to the Mediterranean is within the British Protectorates of Uganda and Central Africa, and the Egyptian and Sudanese dominions. The main stream issues from the Victoria Nyanza at the Ripon Falls and flows through Lake Choga, whence it diverges to the Albert Nyanza and enters the plains of Lado, in the Mongalla Province of the Sudan, as the *Bahr el Jebel*. At Lake No the stream effects a confluence with the *Bahr el Ghazal*, from the South-west, and further east with the *Sobat*, from the south-western highlands of Abyssinia. From the Junction with the *Bahr el Ghazal* the stream is known as the *Bahr el Abiad* or *White Nile*. At Khartoum, 535 miles above the Sobat confluence, the river is reinforced by the *Bahr el Azrak*, or *Blue Nile*, from the south-east, and near El Damer, 200 miles further north, by a confluence with the *Athara*, from Abyssinia. Thence the river flows north-west to Abu Hamed, and makes a great south-westerly bend, across the Nubian Desert, before resuming its northward course through the Dongolas to the northern frontier at Wadi Halfa. From the *Athara* confluence to the Mediterranean the Nile has a course of close on 1,600 miles, and from its sources to the confluence its length may be reckoned at 2,400 miles, giving a total waterway of 4,000 miles. From the Ripon Falls (on the northern shore of Victoria Nyanza) to Rosetta (on the Mediterranean) the length of the waterway is stated to be 3,475 miles. Between Khartoum and Wadi-Halfa occur five of the six *Cataracts*, the remaining (first) cataract being in Egypt at Assuan. The sixth occurs at the Shabluka Gorge, below Khartoum; the fifth below Berber, at El Solimanieh; the fourth in the Nubian bend, between Monastir and Merowé; the third between New Dongola and the 20° N. lat.; the second ends just above Wadi Halfa; the first (in Upper Egypt) has been greatly diminished in vehemence by the construction of the dam and locks at Assuan.

Government.—After the reconquest of the Sudan an Agreement, signed on Jan. 19, 1899, between Egypt and Great Britain, defined the boundary between Egypt and the Sudan, and provided for its administration. The Sudan is administered by a Governor-General, aided, since 1920, by a Council nominated from amongst the Officials of the Government. All Ordinances and Laws are made by the Governor-General in Council. The Civil and Criminal Codes are based on those of India and Egypt. No duties may be levied on imports from Egypt and duties on imports *via* the Red Sea ports may not exceed those levied in Egypt. The import and export of slaves is prohibited.

Local Government.—The Sudan is divided into 15 provinces (*mudirias*) under governors (*mudirs*), subdivided into *manurias*, or districts. In some provinces there are High Court or Provincial Judges; in others the Governor acts as Provincial Judge. District Judges have been appointed in many instances, and where no appointments have been made the Provincial Inspectors and District Officers act in their stead.

Defence.—A small garrison of British troops is quartered at Khartoum, under the command of the Governor-General, and there are also native

regiments. The police and the locally recruited irregulars (*jehadia*) are under provincial administration.

Education.—In addition to *kuttabs* (vernacular schools) there are 6 primary schools at Khartoum. Omdurman, Wad Medani, El Obeid, Suakin and Athara, where instruction is given in English as well as Arabic, attended by about 1,100 pupils; a secondary school at Khartoum (Gordon College), and a training college (also at Gordon College); and technical or trade schools at Khartoum and Omdurman. The central authority is the Education Department.

Production.—The Sudan is the chief source of the world's supply of gum arabic and ivory. The Gezira Irrigation Project (by means of a dam on the Blue Nile at Makwar, about 170 miles south of Khartoum) will enable 100,000 acres to be put under cotton in a few years' time with unlimited scope for extension. Cotton area 1920, 59,026 Feddans; Crop 1920-1921 estimated at 93,000 Kantars. Other products include sesame, senna leaves and pods, ground-nuts, dates, hides and skins and gold. The principal grain crops are dura, a kind of millet used for making bread, and dukhn. Estimated yield of dura 1920, 472,000 tons. The Cattle Trade in the Sudan shows remarkable growth in recent years and the number exported is increasing yearly. For some years Egypt has depended very largely on the Sudan for its meat supply. The forests which line the river bank, rich in fibres and tanning material, extend to the frontiers of Abyssinia. On the White Nile the forests contain valuable trees—the ebony tree, the gum acacia, the bamboo, and the rubber creeper. The finest gum forests are in Kordofan, and the best rubber in the *Bahr el Ghazal*. Gold is the only mineral at present being successfully exploited in the Sudan, a mine being worked at Gabait.

Railways, &c.—In 1915 about 1,500 miles of railways were open for traffic. A bridge has been constructed over the Blue Nile at Khartoum, and the railway now runs to El Obeid, the chief town of Kordofan Province, crossing the White Nile by another bridge near Hilet Abbas. Since the opening of the eastern railway the Red Sea ports of Port Sudan and Suakin receive much of the trade which formerly passed northwards. South of Khartoum communication is established by steamers and boats on the Blue and White Niles, Sobat and *Bahr-el-Ghazal*, and inland chiefly by camels and donkeys. All the principal towns are in direct telegraphic communication with Khartoum, the total mileage of telegraph lines being 4,353 miles in 1920. There are 65 stationary and 11 travelling Post and Telegraph offices, and 11 wireless telegraphy offices.

Finance.—The revenue is derived mainly from land tax, animal tax, royalties on gum and ivory, customs and railways, posts, telegraphs and steamboat services.

CAPITAL, KHARTOUM, at the junction of the White and Blue Niles. The town has been rebuilt and now contains a large mosque for Muhammadans, a cathedral, and the Gordon College, with extensive government buildings. Population about 23,000. Opposite Khartoum, on the Blue Nile is Khartoum North (16,000), and on the White Nile is Omdurman (60,000), the former Mahdist capital. Other towns are Berber, El Damer, Athara, Abu Hamed, Merowé, Dongola, Wadi Halfa, Port Sudan, Suakin, Sinkat, Kassala, Kamilin, Sennar, Singa, Makwar, Wad Medani, Roseires, Gallabat, Gedaref, El Obeid, El Dumei, El Fasher (Darfur), Kodok, Mongalla, Kosti and Rejaf.

TANGANYIKA TERRITORY.

TANGANYIKA TERRITORY, formerly "German East Africa," was attacked by British and South African forces and conquered in 1918, the German forces surrendering near Abercorn in North-east Rhodesia on Nov. 23, 1918. Civil Administration was established *pari passu* with the conquest of the territory, and the whole Colony passed under the effective control of the present Administration at the beginning of 1919.

Tanganyika Territory has a coast-line of about 620 miles and an estimated area of 384,280 square miles. The Sultan of Zanzibar's rights over the narrow strip of coast territory were acquired by Germany in 1890 for a payment of 4,000,000 marks. The coast-line extends from the mouth of the Umba to the mouth of the Rovuma River.

The native population consists mostly of tribes of mixed Bantu race, and was enumerated for the whole area (Jan. 1, 1913) at 7,659,898, the coloured population (other than native) being 14,898. The thickly populated provinces of *Ruvundia* and *Urundi* are now under Belgian administration, so that the native population of Tanganyika Territory is about 4,100,000. The total white population is 2,447. According to German law every native born after 1905 is free, but a mild serfdom was continued under German rule.

Education is not compulsory. In 1921 there were 50 Government schools, with 71 native teachers and 3,800 pupils. Protestant and Roman Catholic missionary societies are working in the Territory.

The total area under forests is about 2,700,000 acres, of which about 2,170,000 are included in the Government Forest Reserves. There are a number of plantations of coco-palms, coffee (on the higher lands), caoutchouc, sugar, cotton, cardamum and cinchona, while fibre plants (especially sisal) are successfully cultivated. In 1921 there were 3,147,442 cattle, and 3,405,103 sheep and goats in the Territory. Minerals known to exist within the Protectorate are coal, iron, lead, copper, mica, and salt. Agates, topaz, moon-stones, tourmalin, and quartz crystals are found, and garnets in large quantities.

The chief exports in 1921 were: Sisal, cotton, hides, skins, copra, coffee, ground nuts, ghee and grain; the chief imports in 1921 were cotton piece goods, foodstuffs, kerosene, cigarettes, tobacco, spirits, wines and beer.

*Estimated Revenue, 1921-22 £1,282,800
 Estimated Expenditure, 1921-22 1,920,722

	1920.	1921.
Imports	£1,734,731	£1,426,125
Exports	1,721,412	1,015,443

The chief seaports are Dar-es-Salaam, Tanga, Bagamoyo, Pangani, Kilwa, Lindi and Mikindani, but few of these are accessible to ocean-going vessels, though gradual improvements are being introduced. There are two railway lines in the Protectorate—the Usambara railway from Tanga to New Moshi (220 miles), commenced in 1905 and completed in Feb., 1912, and the Central railway (780 miles), from Dar-es-Salaam to Kigoma, completed in Feb., 1914. Dar-es-Salaam is in telegraphic communication with the coast towns, Zanzibar, Mombasa, and many inland centres. There are 43 post offices and telegraph stations. Three Battalions of the King's African Rifles are stationed in Tanganyika Territory.

In 1921, 641 steamers (exclusive of coastal boats) of 1,040,684 tons and 7,648 vessels (dhows) of 144,277 tons entered the various ports from places beyond the territory.

TOGOLAND.

(Joint Franco-British Administration.)

The former German colony of Togoland was conquered by Franco-British forces during the war of 1914-18, and its administration has been entrusted to France and Great Britain jointly by the Supreme Council of the Allied Powers.

Togoland is situated on the Gulf of Guinea between the (British) Gold Coast Colony and (French) Dahomey, and is bounded on the south by the Atlantic and on the north by (French) Upper Senegal-Niger, and lies between $0^{\circ} 15' W.$ — $2^{\circ} E.$ long. and $6^{\circ} 11' N.$ lat. at its extreme limits, the coast line being only 28 miles in extent ($1^{\circ} 14' - 1^{\circ} 38' E.$ long.). The coast is fringed with lagoons, but for some 50 miles inland are undulating plains, which end in a plateau, about 1,000 feet in mean level, with Mount Agu (3,135 feet) and Mount Avaklu (3,250 feet) in the south-west. The country is watered by the Oti, which effects a confluence with the Volta at the western boundary of Togoland. The area is 33,659 English square miles, with a population of about 1,000,000. The Christian element is small. Coffee, cocoa, cotton, maize, kola and other tropical products are abundantly cultivated; palm oil, palm kernels, rubber, cotton, maize, ground nuts, vegetable butter, fibre, indigo, kola nuts, ebony, and other forest products are exported (exports, 1919, £850,744). The imports (valued at £665,322 in 1919) are textiles, metals, hardware and spirits. The revenue exceeds the expenditure, and the colony is in a very flourishing condition. About 210 miles of railway are open, lines running from the capital to Aneho and to Misahöhe and Atakpame.

In 1920 the whole territory was divided into a British Sphere and a French Sphere.

The British Sphere consists of an area of about 10,200 sq. miles with an estimated population of 200,000. No portion of the coast is included in the British area. The sphere is administered by the Government of the Gold Coast.

TRINIDAD and TOBAGO.

TRINIDAD is the most southerly of the West India Islands. It is close to the north coast of the continent of S. America, the nearest point of Venezuela being 7 miles distant. It lies between $10^{\circ} 3' - 10^{\circ} 50' N.$ lat. and $60^{\circ} 55' - 61^{\circ} 56' W.$ long., and is about 69 miles in length by 54 in breadth, with an area of 1,862 square miles (527,572 acres cultivated), and a population at the Census of 1921 of 365,913 (including Tobago). The island was discovered by Columbus in 1498, was colonised in 1588 by the Spaniards, and capitulated to the British under Abercromby in 1797. The chief town and port of entry, Port of Spain (pop. 61,531), is one of the finest towns in the West Indies, with sewerage, electric lighting, tram and telephone services. Other towns of importance are San Fernando (pop. 10,610), about 30 miles south of the capital; Princetown (pop. 4,983), and Arima (pop. 4,260). A remarkable phenomenon is the asphalt lake near the village of La Brea, 110 acres in extent, containing an apparently inexhaustible supply; in 1921, 92,324 tons (£235,460) were exported. The soil is rich and

productive, the most important products being sugar, cocoa, mineral oil, molasses, rum, copra, limes, and coco-nuts, and various kinds of timber and fruits. The chief exports (1921) were cocoa £1,522,654; sugar £1,458,514; petroleum £729,023; and coco-nuts £114,284. Coal is found in Manzanilla, and is indicated in other parts of the island. The petroleum industry has made considerable advance, boring operations being carried on by 20 different companies. There are 124 miles of railway open, electric lighting and tramway service, and waterworks and sewage operations have been established. The island is crossed by the telegraph wire of the West India and Panama Company, by Government telegraph and private telephone wires. There is also wireless telegraphic communication between Trinidad and Tobago and between Trinidad and Demerara, Curaçao, Martinique, St. Thomas, &c. The Government is vested in a Governor, an Executive Council, and a Legislative Council, all of whom are nominated by the Crown.

	1919.	1920.	1921.
Revenue	£1,342,884	£1,917,743	£1,867,944
Expenditure ..	1,309,407	1,652,597	2,074,927

Imports	6,217,234	9,498,166	7,473,682
Exports	7,256,594	9,416,545	5,193,976

Tobago was annexed in 1889 to the Government of Trinidad, and on Jan. 1, 1899, it was constituted a ward of that island. It is between $11^{\circ} 9' N.$ lat. and $60^{\circ} 43' W.$ long., about 75 miles south-east of Grenada, 18 miles north-east of Trinidad, and 120 miles S.S.W. of Barbados; is 26 miles long, and from 6 to $7\frac{1}{2}$ broad, and has an area of 114 square miles, with a population (Census 1921) of 23,390. It is one of the most healthy of the West Indies; the temperature varies from 81° to 88° . There are two towns in the island, viz., Scarborough (pop. 773) and Plymouth (pop. 430).

TRISTAN DA CUNHA

is the chief of a group of islands of volcanic origin lying in lat. $37^{\circ} 6'$ S. and long. $12^{\circ} 2'$ W., discovered in 1506 by a Portuguese admiral (Trisão da Cunha), after whom they are named. The population numbers 127, and the inhabitants are said to be very long-lived. The principal settlement (Edinburgh) is in the north-west of the island. In spite of periods of distress the inhabitants refuse to leave the island for the Cape of Good Hope, to which they are attracted by offers of land.

Resident Chaplain, Rev. H. M. Rogers, M.A.

INACCESSIBLE ISLAND is a lofty mass of rock with sides 2 miles in length; the island is the resort of penguins and sea-fowl.

THE NIGHTINGALE ISLANDS are three in number, of which the largest is 1 mile long and $\frac{3}{4}$ m. wide, and rises in two peaks, 960 and 1,105 ft. above the sea-level respectively. The smaller islands, Stoltenhoff and Middle Isle, are little more than huge rocks. Numbers of seals and sea-elephants visit these islands.

GOUGH ISLAND (or Diego Alvarez), in $40^{\circ} 20'$ S. and $9^{\circ} 44'$ W., lies about 250 miles S.E. of Tristan da Cunha. The island is about 8 miles long and 4 miles broad, with a total area of 40 square miles, and has been a British possession since 1816. The island is the resort of penguins and has valuable guano deposits. There is no permanent population.

TURKS AND CAICOS ISLANDS.

These West India islands geographically form a sort of annexe of the Bahama group, from which Government they were separated in 1848. In 1873 they were annexed to Jamaica, from the north-west of which they are distant about 420 miles. They have an area of about 170 square miles. The population in 1911 was 5,615, of which the principal island, Grand Turk, contains 1,681. Salt is the principal industry of the islands, and Sisal hemp and sponges are exported.

A Commissioner administers the government of the Dependency, assisted by a Legislative Board. This Board has control of local finance, and passes local ordinances, subject to the assent of the Governor of Jamaica, who is also the medium of communication between the Commissioner and the Colonial Office. The Legislature of Jamaica has the power to pass laws applying to the Turks and Caicos Islands, and the jurisdiction of the Supreme Court of Jamaica extends to the Islands in matters of divorce and matrimonial causes, and is also a Court of Appeal.

UGANDA.

(The Uganda Protectorate.)

The territories now comprised within this Protectorate came under British influence in 1890, and a portion of them was for a time administered by the Imperial British East Africa Company. In 1894 a British Protectorate was declared over the kingdom of Uganda and some of the adjoining territories. The present limits are approximately as follows:—On the north, the Uganda-Sudan boundary; on the east, a line drawn down the middle of Lake Rudolf, and along the west boundary of the Colony of Kenya and the eastern shores of Lake Victoria; on the south, by Tanganyika Territory (late German East Africa); and on the west, by the eastern boundary of the Belgian Congo. Within these boundaries lie part of the Victoria Nyanza, part of Lake Edward, the whole of Lake George, half of Lake Albert, the whole of Lake Kioga, the whole of Lake Salisbury, part of Lake Rudolf, and the course of the Nile from its exit from Lake Victoria to Nimule, where the Egyptian Sudan commences. Total area, 110,300 square miles, including 16,377 square miles of water.

For administrative purposes, the Protectorate is divided into 5 Provinces:—

(1) *Eastern Province*, comprising the districts of Busoga, Bukedi, Teso, Lango, Karamoja, and Loror.

(2) *Rudolf Province*, comprising the districts of Turkwel, Turkana, and Dabossa (the last named being, at present, under military occupation).

(3) *Northern Province*, comprising the districts of Bunyoro, Gulu, Chua, and West Nile.

(4) *Western Province*, comprising the districts of Toro, Ankole, and Kigezi.

(5) *Buganda Province* (with islands in Lake Victoria) comprising the districts of Mengo, Masaka, Mubendi, and Entebbe. Owing to sleeping sickness, the islands of Lake Victoria were entirely depopulated, and the inhabitants (about 20,000) settled on the mainland in fly-free districts; but the work of repopulating these islands has been taken in hand as a result of experiments, and natives and their cattle are being repatriated.

With the exception of the Rudolf Province the whole Protectorate is now under direct administration; but the native kings or chiefs, whose rights are in some cases regulated by treaties, are encouraged to conduct the government of their own subjects. The province of *Bunyoro* is recognised as a native kingdom under a *Kabaka* (H.H. Daudi Chwa, grandson of the celebrated Mutesa). He is assisted in the government by three native ministers and a *Lukiko*, or native assembly. In Buganda (and in *Bunyoro*, *Ankole* and *Toro*, also ruled over by native "Kings"), purely native matters are dealt with by the various *Lukikos*, but in serious cases there is an

appeal to higher courts. For Europeans and non-natives justice is administered by His Majesty's Courts. The principal British representative is the Governor who (with the assistance of the Executive and Legislative Councils), makes Ordinances for the administration of justice, the raising of revenue, and other purposes. There are local and special courts of justice, and a High Court with civil and criminal jurisdiction. The Appeal Court consists of the judges of the High Courts of Kenya, Uganda, Nyassaland and Zanzibar. In 1921 there were 2,517 criminal cases tried. There is an armed constabulary force, under a British Commissioner of Police and British officers. There is also a volunteer reserve of Europeans.

In 1920 Executive and Legislative Councils were constituted, and these came into being in Jan. 1921. The former consists of 4 appointed members and the latter includes the former, with 2 unofficial members, and is presided over by the Governor.

The total population of Uganda (December 1921) is given as 3,066,327, composed as follows: Natives, 3,059,583; Asiatics, 5,464; Europeans, 1,280 (including 412 females). Among the natives approximately 640,000 belong to the intelligent, civilised Baganda, a race converted to Christianity by British and French missionaries. Educational work is undertaken by the various Missionary Societies, who receive grants amounting to £3,025 towards scholarships, &c., for students and teachers. About 1,700,000 natives speak Bantu languages; there are a few Congo pygmies living near the Semliki river; the rest of the natives belong to the Massai, Nilotic, and Sudanese groups.

In 1921 total exports, £1,539,538; the import figures are now merged in those of Kenya. The export trade is mainly in cotton (£1,281,357), coffee, chillies, oil-seeds, rubber, ivory, and hides and skins. The trade is chiefly with Great Britain, the United States, and India.

	1919-20.	1920 ^o .	1921.
Revenue	£495,548	£777,084	£803,173
Expenditure	465,117	616,151	1,014,271

In 1921 the poll-tax amounted to £381,572 and Customs to £157,980.

The headquarters of the British administration is at ENTEBBE; the native capital of Buganda is at MENGO (Kampala). Nile steamers ply to Rejaf, which is about eight day's march from Nimule, the Sudan port of the Lake Albert Marine Service. A regular steamer service is maintained by the *Uganda Railway Administration* between Kisumu, the railway terminus, and Entebbe, Port Bell, and Jinja, the principal Uganda ports on Lake Victoria. The *Busoga Railway Marine*, which, with the Busoga Railway, is controlled by the Uganda Railway, deals with the traffic on Lake Kioga. There are two steamers and a large number of lighters on that waterway. An additional steamer and subsidiary craft ply on Lake Albert and the Nile between Butiaba, Nimule and Belgian port of Kasenye at the south of Lake Albert. The *Busoga Railway*, of the same gauge as the Uganda Railway, 62 miles in length, runs from Jinja (on Lake Victoria) to Namasagali, a point on the Nile below the rapids, and deals with the cotton output in the regions round

Lake Kioga, connecting that lake with Lake Victoria. There is a railway from Port Bell to Kampala, 7¼ miles in length. There is a fleet of Government motor vans. The length of telegraph line in the Protectorate is (1921) 1,187 miles, with 23 telegraph offices.

Governor and Commander-in-Chief, His Excellency Sir Geoffrey Francis Archer, K.C.M.G. (1922) (and £1,000 duty) £3,000
 Chief Secretary, + E. B. Jarvis, C.M.G. 1,300
 Provincial Commrs., C. W. G. Eden; P. W. Cooper, O.B.E.; A. H. Watson; J. C. R. Sturrock £800 to 1,000
 Chief Justice, Charles James Griffin, K.C. 1,500
 Puisne Judge, F. Guthrie Smith 1,200
 Attorney-General, + A. Hogg 1,100
 Principal Medical Officer, + C. A. Wiggins 1,200
 Asst. Chief Secretary, E. C. Elliot £800 to 900
 Treasurer, + A. E. Booty 1,100
 Dir. of Public Works, G. N. Loggins, A.M.I.C.E. £1,100

Director of Surveys and Land Officer, E. Richardson 1,100
 Director of Agriculture, S. Simpson 1,100
 Director of Transport (vacant) 900
 Commr. of Police, Maj. E. H. T. Lawrence, O.B.E. 1,000
 Geologist, E. J. Wayland 800
 Chief Veterinary Officer, E. Hutchins 900
 Chief Forestry Officer, R. Pyffe 800

CAPITAL (Administrative Headquarters), Entebbe.

WEIHAIWEI.

The territory of Weihaiwei was leased to Great Britain by China by a convention made on July 1, 1898, and lies in latitude 37°30' N., longitude 122°10' E. It is situated in the Chinese province of Shantung, and comprises the island of Liu Kung, all the islands in the Bay of Weihaiwei, and a belt of land 10 English miles wide along the entire coast-line, with a total area of about 285 square miles, and a population in 1921 of 147,177, in which are included 3,000 resident on the island of Liu Kung. In addition to the leased territory there is a zone which comprises that portion of the province of Shantung lying east of the meridian 121°40'—an area of 1,500 square miles—within which Great Britain has the right to erect fortifications, station troops, or take any other measures necessary for defensive purposes. The winter is cold, but dry and bracing. The summer heat is not excessive, and the rainfall is, as a rule, small.

The government is administered by a Commissioner. Weihaiwei is a port of call for steamers running to and from the North of China, and there is regular steam communication with the ports of Shanghai, Hong Kong, Chefoo, and Tientsin.

Administrator, A. P. Blunt.
 Judge of the High Court, Hiram Parkes Wilkinson.
 Crown Advocate, Allan G. Mossop.
 Senior District Officer and Magistrate, H. Jowett.
 Junior District Officer and Magistrate, S. L. Burdett.
 Senior Medical Officer, W. M. Muat, M.B.
 Financial Assistant & Chief Clerk (vacant).
 Inspectors of Police, A. Whittaker, F. Forcey, G. H. Jennings, A. G. Gunn.

* Nine months only.

† Members of Executive Council.

WINDWARD ISLANDS.

The Government of the Windward Islands is made up of the three colonies of Grenada (the seat of government), St. Vincent, and St. Lucia, with their dependencies, the Grenadines being divided between Grenada and St. Vincent. The total area is 508 square miles, with a population (1921) of 162,254. There is one Governor for the three islands; but there is no General Legislative Council as in the Leeward Islands, and no common tariff or treasury. Each island retains its own institutions, and in the Governor's absence is governed by an Administrator subordinate to him.

Governor and Commander-in-Chief, Sir

G. B. Haddon-Smith, K.C.M.G. £3,000

Private Secretary & A.D.C. (vacant) 300

Auditor, M. J. Flanagan £440 to 550

Staff Officer (vacant)

Transit, about 14 days.

GRENADA

(AND THE GRENADINES).

Grenada is situated between the parallels of $12^{\circ} 30' - 11^{\circ} 58'$ N. lat. and $61^{\circ} 20' - 61^{\circ} 35'$ W. long., and is about 21 miles in length and 12 miles in breadth; it is about 95 miles north of Trinidad, 68 miles S.S.W. of St. Vincent, and 100 miles S.W. of Barbados. Area, about 85,120 acres; population (including some of the Grenadines), 66,302 (Census of 1921). The country is mountainous and very picturesque, and the climate is healthy. Grenada was discovered by Columbus in 1498, and named Conception. It was originally colonised by the French, and was definitely ceded to Great Britain by the Treaty of Versailles in 1783.

The soil is very fertile, and cocoa, spices, rubber, cotton, coffee, and fruit are grown. The forests are rich in timbers. The imports chiefly comprise dry goods, bread-stuffs, hardware, &c. The Legislative Council consists of 14 members, seven of whom are officials.

St. George's, on the south-west coast, is the chief town, and possesses a good harbour.

	1920.	1921.
Public revenue	£134,128	£99,932
Expenditure	148,175	136,969
Public debt	223,670	223,670
Total imports	630,803	258,711
Total exports	603,697	279,217

Colonial Sec., Herbert Ferguson £700 to 820

Treasurer, E. D. Laborde, I.S.O. £600 to 740

Chief Justice, G. O'D. Walton 1,100

Attorney-General, N. J. Paterson, K.C. 800

Colonial Surgeon, G. W. Paterson 800

T. W. S. Garraway, E. Dist., each £500;

H. Allan Otway, District Commr. of
Carriacou £350 to 420

Postmaster, C. L. Wilson £350 to 420

Chief of Police, Maj. O. C. Heidenstam
(and quarters) £385 to 440

The GRENADINES are a chain of small islands lying between Grenada and St. Vincent (within which Governments they are included), comprising an area of 8,462 acres. The largest island is Carriacou, attached to the Government of Grenada, pop. (1921) 7,104.

ST. LUCIA,

the largest and most picturesque of the Windward group, situated in $13^{\circ} 50'$ N. lat. and $60^{\circ} 58'$ W. long., at a distance of about 90 miles W.N.W. of Barbados, 21 miles N. of St. Vincent, and 21 miles S.E. of Martinique, is 24 miles in length, with an extreme breadth of 12 miles. It comprises an area of 233 square miles with a population (Dec. 31, 1921) of 52,250. It possibly possesses the most interesting history of all the smaller islands. Fights raged hotly around it, and it constantly changed hands as between the English and the French. It is mountainous, its highest point being 3,145 feet above the sea, and for the most part it is covered with forest and tropical vegetation. The principal exports (1921) are sugar, cocoa, coco-nuts, copra, limes, lime-juice, molasses and syrup. The chief places are Castries, the capital (pop. 1921, 5,899), and Soufrière (pop. 2,480).

Port Castries, one of the finest in the W.I., is a coaling depôt. In 1921, 177 steamers (tonnage 385,384) entered Port Castries.

Magistrates, H. W. Steele, £480; P. A.

McElwaine 260

ST. VINCENT,

an island about 95 miles west of Barbados, situate in $13^{\circ} 10'$ N. lat. and $60^{\circ} 57'$ W. long., is 18 miles in length and 11 in breadth, comprising an area, with its dependencies, of 150 sq. miles, and a population (Census of 1921) of 44,447. In 1846 a large number of Portuguese labourers, amounting to 2,400, entered the island, and proved a valuable acquisition. St. Vincent is more thoroughly English than the two other islands of the group, though it has been the scene of warfare. In 1783 it was secured to Great Britain.

The chief products are arrowroot, cotton, sugar, molasses, rum, cassava, cocoa, coffee, and spices. Its chief imports are linen, cotton and woollen manufactures, Canadian flour, fish, lumber, &c. Steps have been taken to settle the labouring classes on lands acquired for the purpose.

CAPITAL, Kingstown. Population (1921), 3,836.

Attorney-General, L. C. Levy 500

WRANGEL ISLAND.

Wrangel Island (or Long's Island), in the Arctic Ocean off the N.E. coast of Siberia, was discovered by James Long in 1849, and was occupied by shipwrecked members of Stefansson's Arctic expedition in 1914. On Sept. 21, 1921, the British flag was hoisted on the island by an expedition despatched to the island by Stefansson, the annexation being notified to the Government of the Dominion of Canada on March 17, 1922. The island is the resort of polar bears, and its highest point is Berry Peak (2,300 ft.), in the centre of an arctic plain.

ZANZIBAR.

(The Zanzibar Protectorate.)

Sultan, H.H. Seyyid Khalifa bin Harub, K.C.M.G., K.B.E., succeeded his brother-in-law, Dec. 9, 1911.

The Zanzibar dominions became independent in 1856 under the rule of Seyyid Majid, a son of Seyyid Said, Sultan of Muscat and Zanzibar. They formerly extended along the mainland as far south as Tungwi Bay and north as Warsheikh; but since the cession of the coast-line from Ruvuma to Wanga, including the island of Mafia, to Germany in 1890, and of the Benadir coast to Italy in 1904, they are now confined to the islands of Zanzibar and Pemba, a ten-mile coast-line from Wanga to Kipini, the islands of Lamu, Manda, Patta, and Siwa, together with the port of Kismayu, with a radius of 10 miles. As far as the mouth of the Juba, the Zanzibar dominions on the mainland are under the administration of H.M. Government through the Governor and Commander-in-Chief in the East Africa Protectorate (*q.v.*). Zanzibar has been a British Protectorate since November, 1890. On July 1, 1913, the Protectorate was transferred from the Foreign to the Colonial Office.

By a decree of Sultan Hamoud (1897) the legal status of slavery ceased to be recognised in the islands of Zanzibar and Pemba.

As the centre of the Arab power, Zanzibar, from the beginning of the 19th century until quite recently, dominated the trade of East Africa. The islands possess practically a monopoly in cloves (the export of which was valued at £817,000 in 1921) and produce quantities of copra (exports in 1921 £333,500). In addition, Zanzibar serves as a storehouse for the East African coast, where both imports and exports are received and distributed.

Of late years the importance of Zanzibar as a port of transshipment and distributing centre has largely decreased, owing to the development of the mainland, to the opening up of the coast ports to direct steamship service with Europe, and to the transfer to Aden of the seat of trade

with the Benadir coast. Recent figures, however, tend to indicate that the island, in spite of losing the main transshipment trade, will continue, from the very fact of its geographical position, to retain control of the local traffic—of that portion of the trade which goes to small towns up and down the adjacent mainland coast.

The principal imports are rice, grains, groceries, sugar, tobacco, copra, hardware, petroleum and piece-goods; the exports are cloves and copra, in addition to re-exports of previously imported rice, grain, copra and piece-goods.

The city of Zanzibar, on the island of the same name, is the largest in East Africa, and possesses a magnificent harbour, which presents great facilities for shipping and trade generally. The population of Zanzibar and Pemba (Census of 1910) was 198,914, the area of the former 640 square miles, and of the latter 380 square miles.

The number of ocean-going steamers which entered the port in 1921 was—British 249, Italian 25, Portuguese 5, French 18, Netherlands 13, Norwegian 2, others 9, the total tonnage being 627,409; and 5,126 dhows (95,056 tons) entered the port in 1921.

Trade of the Port of Zanzibar in 1921:—

1916	1,040,778	74,893	33,809	112,036

BIRTHS AND DEATHS.

Births and Deaths are reported only in the "Registration Area," which covers about 73 per cent. of the United States. The Births in the Registration Area for 1917 numbered 1,353,792, of which 1,280,288 were white and 73,504 coloured; in 1919 the total number of Births in the Area was 1,373,438. Deaths recorded in the Registration Area for the decade 1908-1917:—

Religion.—The *Year-book of the Churches* gives the total Church population of the United States as follows:—Protestant, 75,099,489; Roman Catholic, 17,885,646; Eastern Orthodox 411,054; Latter-Day Saints, 587,918; Jewish, 1,600,000.

SUMMARY: Europe, 11,882,053; Asia, 237,950; America, 1,727,017; Other, 73,672. Total, 13,920,692.

PHYSIOGRAPHY.

The Republic occupies the southern portion of the North American Continent, between the Atlantic and Pacific Oceans, in latitude 25° – 49° North and longitude 67° – 124° 30' West, its northern boundary being Canada and the southern boundary Mexico.

Its coast-line on both oceans has an estimated length of about 15,610 miles, besides 3,620 miles on the great lakes and 5,744 on the Gulf of Mexico. The principal river is the mighty Mississippi-Missouri, traversing the whole country from north to south, and having a course of 4,500 miles to its mouth in the Gulf of Mexico, with many large affluents, the chief of which are the Yellowstone, Nebraska, Arkansas, Ohio, and Red Rivers. The rivers flowing into the Atlantic and Pacific Oceans are comparatively small; among the former may be noticed the Hudson, Delaware, Susquehanna, Potomac, and Savannah; of the latter, the Columbia, Sacramento, and Colorado. The Mobile and Colorado of Texas fall into the Gulf of Mexico, also the Rio Grande, a large river partly forming the boundary with Mexico. The areas of the water-basins have been estimated as follows:—Rivers flowing to the Pacific, 644,040 square miles; to the Atlantic, 488,877; and to the Gulf of Mexico, 1,683,325 square miles, of which 1,257,547 are drained by the Mississippi-Missouri. The chain of the Rocky Mountains separates the western portion of the territory from the remainder, all communication being carried on over certain elevated passes, several of which are now traversed by railroads; west of these, bordering the Pacific coast, the Cascade Mountains and Sierra Nevada form the outer edge of a high table-land, consisting in great part of stony and sandy desert, and in which occurs the Great Salt Lake, extending to the Rocky Mountains. Eastward the country is a vast, gently undulating plain, with a general slope southwards towards the marshy flats of the Gulf of Mexico, extending to the Atlantic, interrupted only by the Alleghany Mountains, of inferior elevation, in the Eastern States. Nearly the whole of this plain, from the Rocky Mountains to some distance beyond the Mississippi, consists of immense treeless savannahs and prairies of luxuriant grass. In the Eastern States (which form the more settled and most thickly inhabited portion of the territory) large forests of valuable timber, as beech, birch, maple, oak, pine, spruce, elm, ash, walnut; and in the south, live oak, water-oak, magnolia, palmetto, tulip-tree, cypress, &c., still exist, the remnants of the wooded region which formerly extended over all the Atlantic slope, but into which great inroads have been made by the advance of civilisation. The Mississippi valley is eminently fertile. The mineral kingdom produces in great abundance iron, copper, lead, zinc, and aluminium; the non-metallic minerals including immense quantities of coal, anthracite, petroleum, stone, cement, phosphite rock, and salt. Precious metals include gold and silver, raised mainly in Colorado, California, and Alaska (gold), and Colorado, Montana, Utah, and Idaho (silver); while precious stones are worked in great variety, including the turquoise, sapphire, tourmaline, and garnet.

HISTORY.

Early Colonisation.—A natural factor, the great expanse of ocean which divides the American continent from Asia, has saved America from Asiatic domination, and it required many centuries of progress before the European adventurer dared to attempt the passage of the narrower Atlantic. The aboriginal inhabitants were comparatively few in number, and being generally backward in development, except in Mexico, have left few permanent traces of their presence.

Although Columbus discovered America in the 15th century (Oct. 12, 1492), American history may be said to commence with the colonising expeditions from Europe in the 16th and 17th centuries. No definite European settlement was attempted until the last quarter of the 16th century, when England, Holland, Sweden, France, and Spain made determined efforts to bring into account the potential wealth of the newly discovered continent. Of these nationalities the English secured a paramount

influence, through their natural aptitude for colonisation, which continues to distinguish that race (and in a greater degree the Scots) amongst the nations of Europe. In the 17th century a chartered company founded *Jamestown* (1607), and many Royalist settlements were established in the district which had been named *Virginia*, after Queen Elizabeth, in the previous century. But step by step with the Church and Royalist foundations in the South a similar series of Puritan and Separatist centres was established in the North. The small band of "Pilgrim Fathers" in their 180-ton *Mayflower*, from Southampton, England, to Plymouth, Massachusetts (1620), was soon followed by a stream of well-to-do merchants from Boston, Lincolnshire and other east coast English towns, and *New England* became rapidly prosperous. Between these two settlements the Dutch had established themselves in *New Netherlands* (1621), and the Swedes in *New Sweden* (1638). Other English foundations were *Maryland* (1632), *Carolina* (1663), *New York* (1664), *New Jersey* (1665), and *Pennsylvania* (1681). From that date Continental enterprise may be said to have ceased for half a century, and *Georgia* (1732) was the last of the English settlements.

Anglo-French Wars.—A continuous struggle was waged between the English and French settlements in America, but until the War of 1754-1763 little part was taken by Great Britain in the actual campaigns. The issue of this war decided the fate of America. It secured the possession of the Pacific coast for the inhabitants of the Atlantic slope, and roused the interests of the British Government in the possibilities of its American colonies. The Home Government endeavoured to recover from the colonies part of the cost of the war by which their existence had been secured, but "taxation without representation" was bitterly resented. In December, 1773, some English ships laden with tea arrived in the harbour of Boston, where a non-importation agreement was strictly enforced. A band of colonists, disguised as Indians, boarded the vessels and threw their contents into the sea. This *Boston Tea Party* of December 16, 1773, remains as an outstanding incident in the quarrel between America and Great Britain.

The War of Independence.—In spite of the counsels of Chatham, the King persisted in repressive measures. The colonists resisted in arms, and bloodshed ensued at the first engagement at *Lexington*, April 19, 1775, and continued until the *Capitulation of Yorktown*, October 19, 1781, when Lord *Cornewallis* surrendered with the whole of his forces to General *Washington*. When peace was concluded between America and Great Britain (Sept. 3, 1783), no vestige of territory over which the dispute had raged remained under British rule.

The Declaration of Independence.—On July 4, 1776, the delegates of the various American colonies adopted the Declaration of Independence.* "We, the representatives of the United States of America, in Congress assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, solemnly publish and declare that these United Colonies are, and of right ought to be, Free and Independent States." This Declaration was at length acknowledged by Great Britain, and the United States of America from this beginning has become one of the greatest Powers of the world. The Declaration of Independence was followed by the framing of a *Constitution*, which was ratified in 1787 to 1790 by the 13 *Original States* (Delaware, Pennsylvania, New Jersey, Georgia, Connecticut, Massachusetts, Maryland, South Carolina, New Hampshire, Virginia, New York, North Carolina, and Rhode Island). This Constitution established a legislature of two houses, and vested the executive power in an elective President, and on April 30, 1789, *George Washington* entered office as the first of a line of Presidents of the United States of America.

War of 1812.—The maritime war of Britain and France led to the outbreak of hostilities between the former and the United States, owing mainly to the rival interpretation of the law of allegiance in connexion with impressment of British subjects from American ships to serve in the British Navy. On June 18, 1812, the United States declared war against Britain, in which the latter was generally successful on land and the United States almost invariably victorious on the sea. A land engagement at *Chateaugay* on October 26, 1813, gained lasting glory for the troops of Canada, and earlier in the same year—June 1, 1813—a duel at sea between the *Chesapeake* and the *Shannon* did much to restore the prestige of the British Navy. Peace was concluded by the *Treaty of Ghent* on December 24, 1814, after a purposeless war, which Canada alone has reason to remember with satisfaction.

* On April 30, 1819, the Raleigh (N.C.) Register published the following document, said to have been adopted by the Committee of Mecklenburg County, North Carolina, on May 20, 1775, the day after the receipt of the news of the battle of Lexington. "In the third session of the Second Continental Congress, Richard Henry Lee proposed, and John Adams, of Massachusetts, seconded, a resolution declaring the United Colonies free and independent States; and Thomas Jefferson, John Adams, Roger Sherman, and Robert Livingston were appointed a committee to draw up a Declaration of Independence. This famous document, composed almost entirely by Jefferson, was adopted unanimously on July 4, 1776."

The Gold Rush.—In 1846 a dispute arose between the United States and Mexico in connexion with the boundaries of *Texas*, recently (1845) admitted as a State of the Union, and after hostilities of several months the war ended in the *Treaty of Guadalupe Hidalgo* (1847). Under this treaty Mexico surrendered the disputed portions of Texas and New Mexico, part of Arizona, and California. In 1848 a great rush of goldseekers entered the newly acquired territory, which remains the principal gold-producing State of the Union.

The Civil War.—Among the industrial classes of America in 1860 nearly 4,000,000 were negro slaves, descendants of those planted in the Colonies by Britain. The question of their emancipation led to a bitter dispute between the Northern and Southern States of America, the latter seceding from the Union in 1861. Two years earlier *John Brown*, an advocate of emancipation, had embittered the relations between the North and South by a raid upon the Government arsenal of *Harper's Ferry*, which he captured and held until forced to surrender; and although he was hanged by the State of Virginia his object was eventually achieved by President Lincoln's *Emancipation Proclamation* of January 1, 1863. The *Secession of the Southern States* was followed by hostilities, which included many pitched battles, fought with astounding tenacity and prolific slaughter on both sides. Hostilities ceased soon after the surrender of *General Lee at Appomattox* on April 9, 1865, and the bitterness engendered by the war was buried in a lasting peace. By a careless observance of the Foreign Enlistment Act, Britain permitted the departure from Liverpool of the *Alabama*, which committed depredations upon United States shipping, and was also guilty of other acts of negligence, for which, under the *Treaty of Washington*, May 8, 1871, Britain was called upon to pay £3,250,000 damages to the United States. In the four years' war the Confederate (Southern) States lost over 200,000 men by death and disease, while the victorious Federal (Northern) States lost close on 350,000 from the same causes.

War with Spain.—The continuous misgovernment of the neighbouring island of *Cuba* brought America into conflict with Spain in 1898. A succession of revolts, which the Spanish forces were unable to suppress, left Cuba the prey to anarchy, and induced the United States to despatch to Havana the warship *Maine*. By accident or design that vessel was destroyed by an explosion (Feb. 15), and the United States declared war against Spain on April 25, 1898. The outcome of the hostilities was the freedom of Cuba and the acquisition by the United States of the Spanish possessions in the *Philippine Islands*, in addition to *Guam* (Pacific) and *Porto Rico* in the West Indies.

The Panama Canal.—On June 28, 1902, Congress appropriated the sum of \$40,000,000 for the purchase of all outstanding rights in the work inaugurated on the *Panama Canal*, and on April 28, 1904, a further sum was granted for the purchase of a strip of territory on each side of the proposed waterway from the Republic of Panama. Operations were immediately undertaken, and the Canal was completed in 1913, and was opened to traffic with no inaugural ceremony on August 1, 1914.

Anglo-American Arbitration.—A Treaty of Arbitration between the United Kingdom and the United States was signed at Washington, August 3, 1911. The Treaty contained seven Articles (see 1912 Edition of WHITAKER'S ALMANACK). An Anglo-American Peace Commission Treaty was signed by Mr. Bryan and the British Ambassador on Sept. 15, 1914.

The World War.—On April 6, 1917, the United States, after fruitless endeavours to obtain guarantees from Germany that the rights of neutrals on land and sea would be observed, entered the World War on the side of France, Great Britain and the Allied and Associated Powers. The first shot by U.S. troops (Oct. 27, 1917) was followed by a full participation in the campaigns of the Allies, and the Armies of the United States contributed very largely to the defeat of the Central Powers. At the date of the *Armistice* (Nov. 11, 1918) 3,670,888 troops had been placed under arms, and 77,459 were numbered amongst the killed or died of disease, accident or other causes. U.S. troops also figured amongst the armies sent to the assistance of Russia against the Bolshevik régime, but these were withdrawn, in accordance with the plans of the Allies, in 1919.

GOVERNMENT.

The United States of America is a Federal Republic consisting of 48 States and 1 Federal District (of which 13 are Original States, 7 were admitted without previous organisation as Territories, and 28 were admitted after such organisation), and of 2 organised Territories.

THE CONSTITUTION.—By the Constitution of Sept. 17, 1787 (to which ten amendments were added on Dec. 15, 1791, and eleventh to nineteenth Jan. 8, 1798, Sept. 25, 1804, Dec. 18, 1865, July 28, 1868, March 30, 1870, Feb. 25, 1913, May 31, 1913, Jan. 20, 1919, and Aug. 26, 1920), the government of the United States is entrusted to three separate authorities—the Executive, the Legislative, and the Judicial.

THE EXECUTIVE.

THE *Executive* power is vested in a President, who is elected every four years, and is eligible for re-election. The mode of electing the President is as follows:—Each State appoints, in such manner as the Legislature thereof directs (they are now elected by popular vote on the *first Tuesday after the first Monday in November* of the year preceding the year in which the Presidential term expires), a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative, or anyone holding office under Government, shall be appointed an elector. The electors for each State meet at their respective State Capitals on the *second Monday of the January* following, and there vote for a President by ballot. The ballots are then sent to Washington, and opened on the *second Wednesday of February* by the President of Senate in presence of Congress, and the candidate who has received a majority of the whole number of electoral votes cast is declared President for the ensuing term. If no one has a majority, then from the three highest on the list the House of Representatives elects a President, the votes being taken by States, the representation from each State having one vote. There is also a Vice-President, who, on the death of the President, becomes *ex officio* President for the remainder of the term. In case of the removal or death of both President and Vice-President, a statute provides for the succession of the Secretary of State, Secretary of the Treasury, Secretary of War, Attorney-General, Postmaster-General, Secretary of Navy, and Secretary of the Interior, so that the State can never be without a Head or Ruler.

The President must be 35 years of age and a native citizen of the United States. He receives a salary of \$75,000, with a travelling allowance of \$25,000. Executive duties:—

(1) He is Commander-in-Chief of the Army and of the Navy (and of the Militias when they are in Federal service), and he commissions all officers therein.

(2) With the consent of the Senate, he appoints the Cabinet officers and all the chief (and many minor) officials.

(3) He exercises a general supervision over the whole Federal Administration and sees that the Federal Laws are duly carried out. Should disorder arise in any State which the authorities thereof are unable to suppress, the aid of the President may be invoked.

(4) He conducts the Foreign Policy of the Republic, and, with the approval of the Senate, negotiates Treaties with Foreign Powers. The Declaration of War rests with Congress.

(5) He makes recommendations of a general nature to Congress, and when laws are passed by Congress he may return them to Congress with a veto. But if a measure so vetoed is again passed by both Houses of Congress by a two-thirds majority in each House, it becomes law, notwithstanding the objections of the President.

THE PRESIDENT.

President of the United States, Warren Gamaliel Harding, of Ohio (born at Blooming Grove, Morrow County, Ohio, Nov., 1865; student at Ohio Central College, 1879-1882; newspaper editor and publisher from 1884; member Ohio Senate 1899-1903; Lieutenant-Governor of Ohio 1904-5; United States Senator 1915-1921); elected Nov. 2, 1920, and came into office March 4, 1921, until March 4, 1925. *Republican*.

1. *Vice-President of the United States* (and *ex-officio* President of the Senate), Calvin Coolidge, of Massachusetts (born July 4, 1872, Governor of Massachusetts 1919-1920).

THE CABINET.

(In order of succession to the Presidency.)

2. *Secretary of State*, Charles Evans Hughes, of New York (born 1862), appointed March 4, 1921.

3. *Secretary of the Treasury*, Andrew W. Mellon, of Pennsylvania (born 1855), appointed March 4, 1921.

4. *Secretary of War*, John Wingate Weeks, of Massachusetts (born 1860), appointed March 5, 1921.

5. *Attorney-General*, Harry M. Daugherty, of Ohio (born 1860), appointed March 5, 1921.

6. *Postmaster-General*, Hubert Work, of Colorado (born 1860), appointed March 4, 1922.

7. *Secretary of the Navy*, Edwin Denby, of Michigan (born 1870), appointed March 5, 1921.

8. *Secretary of the Interior*, Albert Bacon Fall, of New Mexico (born 1861), appointed March 5, 1921.

Secretary of Agriculture, Henry C. Wallace, of Iowa (born 1866), appointed March 5, 1921.

Secretary of Commerce, Herbert Clark Hoover, of California (born 1874), appointed March 5, 1921.

Secretary of Labour, James J. Davis, of Pennsylvania (born 1873), appointed March 5, 1921.

DEPARTMENT OF STATE.

(New York and Pennsylvania Aves., Washington, D.C.)

The *Department of State* has cognisance of all matters appertaining to Foreign Affairs, including correspondence with Representatives of the U.S., both diplomatic and consular, and with accredited Representatives of Foreign States in the U.S. The *Secretary of State* is the custodian of the Seal of the U.S., which is affixed by him to all proclamations, to various commissions, and to warrants of extradition; he is also the Custodian of the Laws of the U.S. and of Treaties made with Foreign Powers. He grants and issues Passports, and communicates to Congress reports made by Diplomatic and Consular officers of the U.S. He is the medium of correspondence between the President and the chief executives of the States of the Union.

DEPARTMENT OF THE TREASURY.

(15th Street, Washington, D.C.)

The *Secretary of the Treasury* is charged by law with the management of the national finances. He prepares plans for the improvement of the revenue and for the support of the public credit; superintends the collection of

the revenue, and directs the forms of keeping and rendering public accounts and of making returns; grants warrants for all moneys drawn from the Treasury in pursuance of appropriations made by law, and for the payment of moneys into the Treasury; and annually submits to Congress estimates of the probable revenues and disbursements of the Government. He controls the construction and maintenance of public buildings; the coinage and printing of money; the administration of the Coast Guard and the Public Health branches of the public service, and furnishes generally such information as may be required by either branch of Congress on all matters pertaining to the foregoing. He is *ex-officio* chairman of the Federal Reserve Board, created by Act approved December 23, 1913, known as the Federal Reserve Act; *ex-officio* chairman of the Federal Farm Loan Board, created by Act approved July 17, 1916, known as the Federal Farm Loan Act; and president of the central executive council of the International High Commission, and chairman of the United States section of that Commission.

NATIONAL COMMISSION OF FINE ARTS,

1729, New York Avenue, N.W., Washington, D.C.

The Commission of Fine Arts was created by Congress 17 May, 1910, to advise generally upon the location, selection, and erection of statues, fountains, and monuments in the District of Columbia, and also to advise generally upon questions of art when required to do so by the President or by any committee of either House of Congress. Under this latter provision its functions have been enlarged by Executive Order to cover all works of Art with which the Federal Government is concerned, including designs of public buildings, public parks, within the D.C. An expenditure not exceeding \$10,000 in any one year is authorised by Congress for travelling and other expenses. The members serve without remuneration.

Chairman, Charles Moore, Detroit, Mich.
Vice-Chairman, John Russell Pope, N.Y.
Members, James L. Greenleaf, N.Y.; James E. Fraser, N.Y.; Henry Bacon, N.Y.; Louis Ayres, N.Y.; H. Siddons Mowbray, Conn.
Secretary and Executive Officer, H. P. Caemmerer.

UNITED STATES GEOGRAPHIC BOARD,

Washington, D.C.

By Executive order of August 10, 1906, the official title of the United States Board on Geographic Names was changed to United States Geographic Board and its duties enlarged. The Board passes on all unsettled questions concerning geographic names which arise in the departments, as well as determines, changes, and fixes place names within the United States and its insular possessions, and all names suggested by any officer of the Government shall be referred to the board before publication. The decisions of the board are to be accepted by all the departments of the Government as standard authority.

Chairman, Dr. C. Hart Merriam.
Secretary, Charles S. Sloane.

UNITED STATES RECLAMATION SERVICE.

Director, Arthur P. Davis, Interior Dept. Building, 19th and F, N.W., Washington, D.C. Employees: Washington Office, 75; Field, 3,000 to 5,000. Expenditure per year about \$10,000,000.

The Reclamation Service was organised as a bureau of the Interior Department, under the Reclamation Act of June 17, 1902. It is engaged in the investigation, construction and operation of irrigation works in the 17 arid and semi-arid States of the far West. Twenty-five primary projects, comprising 2,825,000 acres, and three Indian projects (384,000 acres) are under construction or operation, and the major works aid in serving an additional 1,100,000 acres under private canals that generally get stored water from the government reservoirs. The funds for this work have come chiefly from the sale of public lands, from repayments by the water users, and more recently from oil-leasing and other mineral operations, and the money expended is returned to the fund by easy payments of settlers, usually in twenty annual instalments without interest, in accordance with the Reclamation Extension Act of August 13, 1914.

The Service has built about 13,600 miles of canals, ditches and drains (including 117,000 canal structures), involving the excavation of 200,000,000 cubic yards of materials. In connexion with this work there have been constructed 100 storage and diversion dams with

an aggregate volume of 14,500,000 cubic yards, including the *Arrowrock Dam* (349 feet high), Idaho, on the Boise River, and the *Elephant Butte Dam* (306 feet high), New Mexico, on the Rio Grande. The Service has built 101 tunnels, 1,000 miles of road, 83 miles of railroad, 3,280 miles of telephone line, a dozen power plants and 840 miles of transmission lines. It is mining coal, and has manufactured 1,676,000 barrels of cement and sand cement. The net construction cost to June 30, 1922, was \$135,000,000.

Over 450,000 persons are living on the 33,000 farms irrigated by the Service, and in the project towns and cities. Of the 2,825,000 acres above referred to, water was furnished in 1921 to 1,227,500 acres, and of this area 1,157,900 acres were harvested in 1921, producing crops worth nearly \$50,000,000, or an average of about \$43 per acre. The additional lands using stored water yielded crops worth \$45,000,000 more.

Public land farm units on the several projects are opened for settlement from time to time as canals are extended to make irrigation water available. Under present law, soldiers of the World War have a preference right to enter these farms, and at recent openings such soldiers have taken all units.

Information in regard to farms available for settlement may be obtained by addressing, Director, U.S. Reclamation Service, Dept. of the Interior, Washington, D.C.

The Service issues the "Reclamation Record," an illustrated monthly publication, containing articles of interest to irrigation farmers and engineers. An annual report is also issued.

An engineering library of about 5,000 manuscript and printed volumes on the subject of irrigation is maintained in the Washington office of the Service. This library contains descriptions of the construction and operation of the projects, with numerous photographs and maps, plans, specifications, cost data and results of original experimental investigations, and is available for consultation by those interested.

GOVERNMENT PRINTING OFFICE,

North Capitol Street, Washington, D.C.

The Government Printing Office of the United States was established by Congress in 1860 and has been in continuous operation since that time. The present buildings having a floor space of 15 acres, together with the machinery and equipment which they contain, represent an expenditure of approximately \$6,300,000. The annual cost of operation and maintenance is about \$12,000,000. There are 4,100 persons annually employed in the various divisions of the office at a total yearly wage roll of more than \$6,000,000. In addition to doing all of the printing and binding ordered for Congress, the office executes nearly all the printing and binding required by the various executive departments and independent establishments of the U.S. Government. The office has the largest battery of type-setting machines in the world, including 98 linotype machines, 100 monotype key-boards and 126 monotype casting machines, which produced a total of 2,354,450,000 ems of type in 1921. The 160 presses of the office are credited with 2,099,470,000 chargeable impressions. During the year the office handled approximately 80,000 separate jobs.

In addition to the execution of all kinds of printing and binding, including 1,000,000,000 postal cards, and 13,000,000 square inches of

electrotypes and stereotypes, the office manufactures its own printing inks, rollers, glue, type and type metal.

LIBRARY OF CONGRESS,

Capitol Hill, Washington, D.C.

The Library of Congress was established in 1800 and destroyed by fire in 1814. In 1815, purchase of Jefferson collection formed basis for a new collection. Partially destroyed by fire, 1851, and replenished in 1851-2. Since that date increased (1) by regular annual appropriations by Congress (now \$98,000); (2) by deposits under the copyright law; (3) by gifts and exchanges; (4) by the exchanges of the Smithsonian Institution, the library of which (40,000 volumes) was, in 1866, deposited in the Library of Congress, with the stipulation that future accessions should follow it. It comprises 3,000,410 printed books and pamphlets, the floor space of the building (erected at the cost of \$6,347,000, and first occupied in 1897) being 544,000 square feet, and the capacity of the book stacks 3,540,000 octavo volumes and 84,000 volumes of newspapers, the shelving extending to nearly 103 miles. The library is maintained by Congress, the appropriation in 1922 being \$711,745.

U.S. MILITARY ACADEMY, West Point, N.Y.

The United States Military Academy for training cadets for commissions in the U.S. Army was founded at West Point, on the west bank of the Hudson River, in 1802.
Superintendent, Brig.-Gen. Fred W. Sladen,
U.S. Army.

U.S. NAVAL ACADEMY, Annapolis, Maryland.

The United States Naval Academy was founded in 1845 for the education of officers for the Navy. Students are called midshipmen, and must be citizens of the U.S. The course of instruction comprises four years at the Academy.
Superintendent, Rear-Adm. Henry B. Wilson,
U.S. Navy.

THE LEGISLATURE.

The Legislative power is vested in two Houses, the Senate and the House of Representatives, the President having a *veto* power, which may be overcome by a two-thirds vote of each House. The Senate is composed of two Senators from each State, elected by the people thereof for the term of six years, and each Senator has one vote; and Representatives are chosen in each State, by popular vote, for two years. The number of Representatives for each State is allotted in proportion to its population—at present 1 for 211,877. The Senate consists of 96 members. The salary of a Senator is \$7,500 per annum, with mileage at 20 cents per mile, coming and returning, for each regular session. The House of Representatives consists of 435 representatives and territorial delegates. The salary of a Representative is \$7,500 per annum, with mileage as for Senators.

THE SIXTY-SEVENTH CONGRESS.

Pres. of the Senate, Calvin Coolidge, *Mass.* \$12,000
President (pro tempore), Albert B.
Chambers, Iowa.....
Speaker of the House of Representatives,
Frederick H. Gillett, *Mass.*..... 12,000

THE JUDICATURE.

The Federal Judiciary consists of three sets of Federal Courts: (1) The Supreme Court at Washington, D.C., consisting of a Chief Justice and eight Puisne Judges, with original jurisdiction in cases affecting Ambassadors, &c., or where a State is a party to the suit, and with appellate jurisdiction from inferior Federal Courts. (2) The Circuit Courts of Appeal, dealing with appeals from District Courts, and consisting of the Justice of the Supreme Court for the Circuit and all the Circuit and District Judges within the circuit. (3) The District Courts, eighty-seven in number, served by a District Court Judge.

THE SUPREME COURT.

(The Capitol, Washington, D.C.).

Chief Justice, William Howard Taft,
Conn., born 1857, apptd. 1921..... \$15,000
Associate Justices (each \$14,500.)

DEFENCE.

The President is Commander-in-Chief of both Navy and Army, the former being controlled by a Secretary of the Navy, and the latter by a Secretary of War.

THE ARMY OF THE U.S.

Under the provisions of the Act of Congress, approved June 4, 1920, the enlisted strength of the Regular Army, including the Philippine Scouts, must not exceed 280,000, except in time of war or similar emergency, when the public safety demands it; the commissioned strength being placed at 17,726; however, recent legislation (Act of Congress of June 30, 1922) has limited the authorised enlisted strength, exclusive of the Philippine Scouts, to 125,000, and requires that the number of commissioned officers on the active list of the Regular Army and the emergency officers of the late war who are still in service undergoing treatment for physical reconstruction shall be restricted after Jan. 1, 1923, to 12,000. The actual strength of the Army of the United States on August 31, 1922, included 12,947 commissioned officers, 1,105 warrant officers, and approximately 127,000 enlisted men, including the Philippine Scouts. The Army is made up entirely of volunteers.

PRINCIPAL WARS OF THE U.S.

Name of War.	Troops Engaged.
War of Independence, 1775-1784	300,000
North Western Indian, 1790-1795	8,083
War with France, 1798-1800	4,593
War with Tripoli, 1801-1805	3,330
War with Britain, 1812-1815	528,274
Creek Indian, 1813-1814	13,781
Seminole Indian, 1817-1818	6,911
Black Hawk Indian, 1832	6,465
Cherokee Indian, 1833-1839	9,949
Seminole Indian, 1835-1842	41,122
Creek Indian, 1836-1837	13,418
War with Mexico, 1846-1848	107,631
Texas & New Mex. Indian, 1849-1855	6,465
Oregon Indian, 1851-1856	7,229
Civil War, 1861-1866	2,128,948

World War, 1917-1918	4,650,500

U.S. WAR PENSIONS.

Year.	Number of Pensioners on Roll.			Total Payments.
	Invalids.	Widows, &c.	Total.	
				\$
1900	752,510	241,019	993,529	138,462,130
1917	369,936	303,175	673,111	160,805,054
1918	340,318	306,582	646,895	179,835,329
1919	313,140	311,287	624,427	222,159,292
1920	285,110	307,080	592,190	213,295,314
1921	267,629	298,424	566,053	258,715,843
1922	256,918	290,098	547,016	253,807,583

The total disbursement in pensions since the War of Independence is \$6,343,344,121, of which \$5,985,181,609 has been paid on account of the Civil War. The cost of maintenance and expenses of administration in the fiscal year 1922, including the cost of medical examinations and special field examinations, amounted to \$1,816,973.

Disbursements in claims arising out of service in the World War subsequent to Oct. 6, 1917, are not included in the above totals, as such claims are adjudicated in the U.S. Veteran's Bureau, which has jurisdiction over such matters.

THE NAVY OF THE U.S.

No new construction has been authorised for the U.S. Navy since 1918. The three-year building programme initiated in the Act of August 29, 1916, provided for the following construction:—

	1916	1917	1918	Totals.
Battleships	4	3	3	10
Battle Cruisers	4	1	1	6
Scout Cruisers	4	3	3	10
Destroyers	20	15	15	50
Fleet Submarines	—	—	9	9
Coast Submarines	30	18	10	58
Fuel Ships	1	—	2	3
Repair ship	—	—	1	1
Transport	—	—	1	1
Hospital ship	1	—	—	1
Destroyer Tenders	—	1	1	2
Submarine Tender	—	1	—	1
Ammunition ships	1	—	1	2
Gunboats	1	—	1	2

Of the "all big gun" battleships the *California* and *Maryland* were completed, and the *Colorado*, *Washington* and *West Virginia* were launched during 1921. These ships carry eight 16-in. guns (with secondary batteries of 12 5-in. and eight 3-in. anti-aircraft guns), and are 624 ft. long, 97 ft. wide, and displace 32,600 tons; they are driven by four electric-drive turbines of 28,900 h.p. The remaining six battleships still building (*Massachusetts*-*Iowa* class) were designed to carry 12 16-in. guns (and 14 6-in.); these vessels are 684 ft. long, 105 ft. wide, and displace 43,200 tons, and are driven by four electric-drive turbines of 60,000 h.p.

Of the vessels which were authorised in the 3-year programme, the following remain not ordered:—12 destroyers, 6 fleet submarines, and 1 auxiliary. Under the terms of the Naval Act of July 1, 1922, no part of the funds available may now be used toward the construction of these vessels. As a result of the small sum appropriated for the construction of vessels during the fiscal year 1922 it has become necessary to retard the progress of work on vessels now under construction. On July 1, 1922, the following vessels were under construction:—11 battleships, 6 battle cruisers, 10 light cruisers, 4 destroyers, 4 fleet submarines, 37 submarines, 1 gunboat, and 6 auxiliaries. Pending final action on the *Washington Treaty* limiting naval armaments work has been suspended on 7 of the battleships and 4 of the battle cruisers. The following were completed during the fiscal year ended July 1, 1922:—2 battleships, 1 destroyer, 1 fleet submarine, 2 submarines, 2 auxiliaries. Since July 1, 1922, the last 3 destroyers have been completed and commissioned, thus entirely completing the destroyer programme. The following vessels, therefore, now remain under construction:—2 battleships, 2 battle

cruisers (to be completed as aircraft carriers), 10 light cruisers, 3 fleet submarines, 35 submarines, 1 gunboat, and 4 auxiliaries.

All information as to characteristics, costs, &c., available for publication concerning naval vessels, may be found in the *Ships' Data Book*.

EDUCATION.

State School Systems, 1919-1920.

IN 1919-20 the total number of children in the United States 5 to 18 years of age was 27,728,788, of whom 21,578,316 (10,747,511 boys and 10,830,805 girls) were enrolled in public elementary and secondary schools, and 2,034,642 were estimated to be enrolled in private elementary and secondary schools, and in private commercial and business schools. The average daily attendance in the public schools was 16,150,035, the average length of school term was 161.9 days, and the average number of days attended by each pupil enrolled was 121.2 days. In 1919-20, 679,533 teachers (95,666 men and 583,867 women) were employed. The average annual salary of all teachers was \$871. The total number of buildings used as school houses was 271,319, and the estimated value of all public school property was \$2,409,719,120.

The total money received for school purposes, excluding balances on hand, was \$1,155,506,640. Of this amount, \$26,036,098 was received from permanent school funds and from the rent of school lands, \$134,278,753 from State taxes or State appropriation, \$758,896,551 from local tax or appropriation, \$2,474,717 from the Federal Government, and \$233,820,521 from all other sources, State and local. The total payments, excluding payments of bonds, were \$1,036,151,209. This amount includes expenditures for general professional and business control aggregating \$36,752,316; salaries of teachers, supervisors and principals, \$590,119,516; text-books and other instruction supplies, \$42,435,820; instruction in evening schools, \$3,276,593; miscellaneous current expenses, \$210,024,112 (composed of operation of school plant, \$115,707,229; maintenance of school plant, \$30,432,039; auxiliary agencies, \$36,387,302; fixed charges, \$9,285,711; and interest on indebtedness, \$18,211,831); and outlays—sites, new buildings and equipment, \$153,542,852.

Compulsory Attendance Laws, 1919-20.

Every State in the Union has a compulsory school attendance law. In general, children are obliged to attend school from 7 to 14 years of age, and those from 14 to 16 must attend school or secure employment certificates. The required attendance each year varies from eighty days in two States to the full term in thirty-three States. All States have officers charged with enforcing the compulsory attendance law, known in the majority of States as the truant or attendance officers.

Universities, Colleges and Professional Schools, 1919-20.

Of the 670 universities, colleges, and professional schools, 153 were for men, 117 for women, and 400 were co-educational. There were 109 public institutions and 561 under private control or management. The total number of instructors in both private and public institutions was

42,882 (34,111 men and 8,771 women). The public institutions enrolled 156,626 undergraduate and graduate students (102,711 men and 53,915 women). The private institutions enrolled 200,068 undergraduate and graduate students (119,531 men and 80,537 women). In general engineering, 10,231 students were enrolled; in chemical engineering, 5,743; in civil engineering, 8,859; in electrical engineering, 9,469; in mechanical engineering, 11,789; and in mining engineering, 3,048.

The total number of baccalaureate degrees conferred in 1919-20 was 38,552 (23,272 men and 15,280 women); altogether 4,853 graduate degrees were conferred (3,457 men and 1,396 women); 989 honorary degrees were conferred.

The schools of theology enrolled 7,216 students and reported 588 graduates; law schools, 20,992 students and 3,273 graduates; schools of medicine, 14,242 students and 2,806 graduates; schools of dentistry, 8,809 students and 865 graduates; schools of pharmacy, 5,026 students and 1,023 graduates; and schools of veterinary medicine, 908 students and 219 graduates.

Teachers' Colleges and Normal Schools, 1919-20.

In 1919-20, 371 teachers' colleges and normal schools reported to the United States Bureau of Education. These schools are chiefly concerned with the training of elementary teachers. Of this number 138 are State institutions; 45 are teachers' colleges (schools granting a degree after four years' work beyond high school); 33 are city normal schools; 95 are county normal schools; and 60 are private normal schools. The 45 teachers' colleges were separated from the State normal schools, which accounts for the number of State normal schools in 1920, smaller than in 1918 when they were included. The total number of instructors in all teachers' colleges and normal schools was 9,587. The total number of students enrolled was 162,796 (29,149 men and 133,647 women). Of this total enrolment, 135,418 students are in normal training courses. The number of graduates from the normal training courses was 2,151 men and 18,861 women, making a total of 21,012. Practice or model schools are usually operated in connexion with these normal schools, or the public schools are used for this purpose. The total enrolment in these model schools, so far as reported, was 92,446. The total receipts for normal schools were \$31,395,389. The total number of volumes in the libraries was 2,385,238.

Nurse Training Schools, 1919-20.

The number of nurse training schools has increased very rapidly since 1900. At that time 432 schools reported to the Bureau of Education. In 1920 the number of such schools reporting was 1,775. The number of pupils enrolled in these schools in 1920 was 54,953, and the number graduated 14,980. Of the schools reporting, 88 are in hospitals for the insane. The capacity of the hospitals in which all nurse training schools reporting are located, is 321,619 beds, and the average daily number of patients is 252,823. In 1920 a large majority of schools required a minimum age requirement for admission of only 18 or 19 years. In general hospitals 539 schools required 8 hours of duty daily, 474 schools required 9 hours of duty, and 439 schools required 10 hours of duty. In hospitals for the insane, the number of hours of duty required was usually 10 or more. Twenty-two schools

required 12 hours of duty, and 9 required more than 12 hours.

The remuneration granted the pupils in general hospitals is usually less than \$200. In the first year 54 per cent. of the schools pay under \$100, and 41 per cent. pay from \$100 to \$199; in the second year 35 per cent. of the schools pay under \$100, and 56 per cent. pay from \$100 to \$199; in the third year of the course 29 per cent. pay under \$100, and 60 per cent. pay from \$100 to \$199. In the schools in hospitals for the insane the remuneration usually exceeds \$400. In the first year of the course 76 per cent. of the schools pay \$400 or more; in the second year of the course 79 per cent. of the schools pay \$400 or over; in the third year of the course 81 per cent. of the schools pay \$400 or more.

More than 85 per cent. of all the nurse training schools in general hospitals offer a three-year course. About 10 per cent. offer a two-year or two-and-one-half year course. In hospitals for the insane, more than 70 per cent. of the schools offer a three-year course, and the remaining schools offer a two-year course. Almost 43 per cent. of the general nurse training schools require one year of high school work for admission, 21 per cent. require two years of high school work for admission, 26 per cent. require a full high school course, and 10 per cent. require only the completion of the elementary grades for admission.

Of the nurse training schools reporting, 180 are affiliated with colleges or universities. By this co-operation an excellent opportunity is afforded to the training schools to secure for their pupils a high type of instruction in technical and academic subjects.

Public High Schools, 1919-20.

In 1919-20, 14,326 public high schools reported to the Bureau. The total number of teachers in these secondary schools was 97,647 (34,396 men and 63,251 women). The total number of pupils enrolled in these schools was 1,999,106 (891,469 boys and 1,107,637 girls). The total number of coloured pupils included in the preceding figures is 30,223. In the first year of the course 742,320 pupils were enrolled, in the second year 498,796, in the third year 346,684, and in the fourth year 269,355 pupils, including post-graduate and special pupils. In the 7th and 8th elementary grades organised as a part of junior high schools, 141,951 pupils were enrolled. The number of graduates reported by 12,326 schools was 230,902 (90,516 boys and 140,386 girls).

There were 10,821 high schools that reported a four-year curriculum. In these four-year high schools there are 80,864 teachers, and 1,678,823 pupils are enrolled (745,477 boys and 933,346 girls). In addition, in 259 senior high schools, there are 3,651 teachers and 49,816 pupils (22,033 boys and 27,783 girls).

Private High Schools and Academies, 1919-20.

The number of pupils in private high schools and academies, in general, has increased slowly but steadily. The increase has been about proportional to the increase in population. In 1900 the number of students enrolled in these schools was 110,797. In 1919-20 the number enrolled was 184,153. The number of schools reporting in 1900 was 1,978, and the number reporting in 1920 was 2,093. The total number of instructors

in these private high schools in 1920 was 14,946 (5,698 men and 9,248 women). In this group of schools more than any other, there is a tendency for the schools to be either for boys or girls exclusively, rather than co-educational. Of the 2,093 schools reporting in 1920, 385 were for boys only, 728 were for girls only, and 980 were co-educational. Altogether, about one-eighth of the schools had military drill in 1920, enrolling 24,056 students. Of this number 3,823 were girls. In 1916 the number of boys taking this work was 10,324. Within the past four years the enrolment in military drill in these schools has been doubled. The number of coloured students enrolled in these schools in 1920 was 9,526. The total number of graduates from private high schools and academies was 24,166. The average size of the faculty was 7.1. The average number of students to a school was 88.0. The average number of students to a teacher was 12.3.

The number of students enrolled in the first year of these private high schools was 36.1 per cent. of the total number; in the second year, 26.8 per cent.; in the third year, 20.5 per cent.; and in the fourth year, 16.6 per cent.

566 of these private schools were non-sectarian, and 1,527 were denominational (976 Roman Catholic).

Of the total number of students enrolled, 45.7 per cent. were boys and 54.3 per cent. were girls.

The number of Negro girls enrolled in these schools was about twice as large as the number of Negro boys; 6,341 coloured girls were enrolled, and 3,185 coloured boys.

Private Commercial Schools, 1919-1920,

In 1920 reports were received from 902 private commercial and business schools. These schools are of two types: (1) those which are non-denominational, and which are run on a commercial basis; (2) those which are maintained by certain denominations and by Young Men's Christian Associations. The private non-denominational schools reporting were 841, the denominational and Young Men's Christian Association schools reporting were 61. The total number of instructors in these 902 schools was 6,165 (2,976 men and 3,189 women). The number of students enrolled was 336,032 (139,551 men and 196,481 women). The average daily attendance in these schools was 164,662. Altogether 902 schools reported 214,606 students enrolled in day courses. In night courses 121,426 students were enrolled in the 675 schools which reported such courses. In the commercial or bookkeeping course 106,852 students were enrolled; stenographic, 126,055; combined courses, 53,430; telegraphic (wire), 2,804; (wireless), 2,384; accountancy, 11,889; secretarial, 23,073; and in the salesmanship course, 15,167.

In 755 schools in which shorthand was taught 130,927 students or 56 per cent. of the shorthand students reported studied the Gregg system of shorthand; 27 per cent. of the shorthand students, or 64,131 students, studied some Pitmanic system of shorthand.

Schools for Feeble-minded and Sub-Normal Children, 1917-18.

Nearly all States provide schools for feeble-minded children; 43 schools of this type reported

in 1918; 32 private schools also submitted a report. Altogether 131 cities have organised classes for the teaching of sub-normal and backward children. The children in these schools are not usually feeble-minded, but are retarded in their school work. The number of instructors in State institutions was 425, in private institutions 121, and in public day school classes of city schools 1,134. The total number of inmates in State institutions was 35,968 (18,353 boys and 17,615 girls); in private institutions, 983 (467 boys and 516 girls); in public day school classes of city schools, 18,133 (11,937 boys and 6,196 girls).

In State institutions 11 per cent. of the pupils take music, 26 per cent. home economics, 19 per cent. manual training, 11 per cent. agriculture, and 13 per cent. trade training courses. In city day school classes, 90 per cent. of the pupils take music, 27 per cent. home economics, 86 per cent. manual training, 10 per cent. agriculture, and 12 per cent. trade training courses. In private schools 43 per cent. take music, 24 per cent. home economics, 34 per cent. manual training, 14 per cent. agricultural courses, and 4 per cent. trade training courses.

for Vocational Education are included under other independent offices and commissions. During the fiscal year 1922, allotments for Veterans' relief have been made to the Treasury Department in the amount of \$26,550,668.66, to the War Department in the amount of \$4,866,383.40, and to the Navy Department in the amount of \$529,537.84, but expenditures under these allotments appear as expenditures of the respective departments and not of the Veterans' Bureau.

a Deduct, excess of credits.

b Add.

c The railroad expenditures have been reduced by \$266,636,606.26 up to June 30, 1922, on account of deposits by the Railroad Administration representing proceeds of sale of equipment trust notes acquired under the Federal Control Act approved March 21, 1918, as amended, and the Act approved November 19, 1919, and have been further reduced by \$123,783,467.75 up to June 30, 1922, on account of deposits of the proceeds of sale or collection of other securities acquired under the Federal Control Act or Transportation Act, 1920.

d \$25,000,000 of this amount represents reduction in capital stock of United States Grain Corporation effected October 17, 1921, and is reflected in an increase of receipts in an equal amount.

NOTE.—Because of legislation establishing revolving funds and providing for the reimbursement of appropriations, commented upon in the annual report of the Secretary of the Treasury for the fiscal year 1919, p. 126 ff., the gross expenditures in the case of some departments and agencies, notably the War Department, the Railroad Administration, and the Shipping Board, have been considerably larger than above stated. This statement does not include expenditures on account of the Postal Service other than salaries and expenses of the Post Office Department in Washington, postal deficiencies, and items appropriated by Congress payable from the general fund of the Treasury.

WHITAKER'S ALMANACK, 1928.

STOCK OF GOLD IN U.S.A.

According to the Federal Reserve Bulletin for April, 1922, the United States Treasury states that on Jan. 1, 1922, the total stock of gold came to \$3,657,000,000. Of this amount \$380,000,000 were held in the Treasury as assets of the Government, \$2,641,000,000 by the Federal Reserve system, and \$636,000,000 outside these institutions. The last figure is an estimate, and most of it is held by the public in small boards, although part is in the vaults of member and non-member banks. The amount of gold actually in daily use is small, which represents economy in use of a metal which wastes by constant handling. The gold stocks of the U.S.A. are really held in central reservoirs, and the internal movement takes place through a gold settlement fund. Inter-district balances are settled in this way, and the gold itself does not move, but the title to it is transferred through this gold settlement fund. In Oct., 1920, the reserves of the Federal Reserve banks were just over \$2,000,000,000, but by March, 1922, the holdings had increased by \$973,383,000, bringing up the total to \$2,976,703,000. Of this 36 per cent. is now held by the New York Federal Reserve Bank, and 16 per cent. by Chicago, the principal centres to benefit by the influx of metal.

PRODUCTION AND INDUSTRY.

Agriculture.—The total land surface, excluding Island possessions and Alaska, is 1,903,215,360* acres, of which in 1920 955,883,715 were farms (503,073,007 acres improved). The total number of farms in 1920 was 6,448,343, of which 2,456,107 are between 100 and 500 acres, 1,474,745 between 50 and 100 acres, and 1,503,732 between 20 and 50 acres. The gross value of farm products of the United States in 1919 was \$21,425,623,614—a decrease of \$12,931,393,307 compared with 1909. Crops in 1919 were valued at \$14,755,364,894, and animals in 1920 (domestic animals), \$7,623,089,398, and in 1919 animal products at \$2,667,072,273.

* Decrease in land area due to building of Pathfinder and Shoshone Reservoirs in Wyoming and several reservoirs in connexion with irrigation projects in Montana.

Wool.—The total number of animals shorn in 1919 was 26,438,145, producing 228,795,354 lb.

Minerals.—The total value of metallic minerals produced in 1921 was estimated at \$657,540,000 (pig iron, \$394,000,000; copper, \$65,221,000; gold, \$50,067,300), and of non-metallic minerals the total value was \$3,395,460,000 (bituminous coal, \$1,237,000,000; Pennsylvania anthracite \$452,304,903; petroleum, \$753,300,000; in 1921 the production of oil was 469,639,000 barrels, an increase of 26,327,000 over 1920 and the greatest ever recorded. The world's output in 1921 was 750,000,000 barrels; clay products (1920) \$373,670,102; stone, \$92,500,000; natural gas, \$200,302,000; cement, \$178,981,533; and mineral paints (lead and zinc pigments), \$14,801,032. The exports of coal sent across the Atlantic amounted to 24,829,048 tons (of 2,240 lb.) in 1921, while 15,996,419 tons went to Canada.

Manufactures.—The manufacturing establishments enumerated at the five-year Census of 1919 numbered 230,105, the value of their products being \$62,418,078,773, as compared with a value in 1914 of \$24,246 435,000. The leading manufacturing States are New York, Pennsylvania, Illinois, Ohio, and Massachusetts. The principal industrial centres are New York (clothing, printing and publishing, slaughtering and meat packing, foundry and machine-shop products, tobacco, sugar-refining, textiles); Chicago (meat, clothing, iron and steel); Philadelphia (sugar refining, textiles, foundry products and machinery, leather, clothing, printing and publishing); Boston (boots and shoes, foundry and machine shop products, printing and publishing); Pittsburgh (iron and steel); Detroit (automobiles); St. Louis (meat, tobacco, shoes); Cleveland (iron and steel, automobiles, clothing); Baltimore (clothing, slaughtering and meat packing, fertilizers); Cincinnati (foundry products and machinery, meat, clothing); Buffalo (iron and steel, meat, flour); Minneapolis (flour mills, lumber, printing); San Francisco (ship-building, meat, printing).

Automobile Industry.—The value of the cars and lorries manufactured in 1920 was \$2,232,927,678, of parts and accessories, \$725,136,942, and of tyres and tubes, \$636,750,000. The number of cars produced was 1,883,158, of lorries, 322,039. The capital invested in automobile factories was \$1,204,378,642, giving employment to 325,000 persons, who received \$482,950,000 in 1920. The number of automobile vehicles registered in 1920 in the U.S.A. was 9,211,295, including 3,000,000 automobiles on farms and 900,000 commercial vehicles. The petrol produced in 1920 amounted to 4,882,546,699 gallons, and that consumed to 4,256,428,005 gallons, while 32,400,000 tyres were manufactured in 1920. The taxes levied on the motor industry amounted to \$316,720,000. The number of motor vehicles exported in 1920 was 170,765.

FEDERAL EMPLOYMENT BUREAU.

The following figures show the work done by the Federal Employment Bureaus during the past six fiscal years ending June 30:—

Statistics for the years ended June 30.	Number of applications for help.	Number of persons applied for.	Number of applicants for places.	Number referred to employment.	Number actually employed.
1917	189,491	418,810	413,649	363,189	283,799
1918	750,472	2,993,798	2,381,392	2,112,139	1,890,593
1919	...	10,701,447	6,166,447	5,646,353	4,267,813
1920	...	3,165,559	2,589,145	2,458,809	2,018,258

PUBLIC ROADS.—In 1919 the total length of public roads was 2,478,552 miles, the cost of their upkeep in 1919 being \$389,455,932, or \$157.22 per mile, or \$3.68 per head of the inhabitants of the U.S.

SHIPPING.—On June 30, 1922, the mercantile marine of the U.S. consisted of 8,398 sailing vessels of 2,480,867 gross tons; 18,960 steam vessels of 15,982,100 gross tons, a total of 27,358 vessels of 18,462,967 gross tons. In the year ended June 30, 1922, sailing and steam vessels of 61,232,543 tons entered at the various ports of the U.S.; of this total 29,920,203 tons were American and 31,312,340 tons foreign. The tonnage cleared from the various seaports was 61,683,228, of which 29,836,283 tons were American and 31,846,945 tons foreign.

POSTS AND TELEGRAPHS.—On July 1, 1922, there were 51,947 post offices in the U.S. dealing with 22,578,894,140 "pieces" of mail matter of all kinds (letters, postcards, newspapers, packets, &c.). The telegraphs and telephones are not operated by the U.S. Government.

WEIGHTS, MEASURES, AND CURRENCY.

The *Weights and Measures* in common use are shown on page 440. The Metric System of Weights and Measures is permissive, but is little used. The unit of currency is the dollar of 100 cents. The rate of exchange on certain dates in 1922 will be found on p. 439.

* Since 1908 mileage of switching and terminal companies has been excluded.

<i>Wellington—Cons.-Gen., D. F. Wilber... 6,000</i>	

Dependencies of the U.S.A.

THE PHILIPPINE ISLANDS

are situated between $4^{\circ} 40' - 21^{\circ} 10'$ N. lat. and $116^{\circ} 40' - 126^{\circ} 34'$ E. long., and are distant about 500 miles from the south-east coast of the continent of Asia. Their total land area is 115,026 square miles, of which total 94,946 square miles are contained in the eight largest islands, the 3,130 other islands having a combined area of 14,572 square miles. At the Census of 1918 the population was ascertained to be 10,350,730, almost all of Malayan stock, of whom nearly 9,500,000 were Christians (Roman Catholics), about 275,000 were Muhammadans; about 725,000 are pagans. Of the foreign-born residents about three-quarters are Chinese, and of the white population over one-half are from the U.S.A. (8,200 in 1903).

The Philippine Islands were discovered in 1521 by the Portuguese navigator Magellan, who was slain by the natives of Mactan. In 1542 Spain undertook the conquest of the islands, which were named "Filipinas," after the son of the King of Spain, and in 1571 the city of Manila was founded by the conquistador Legaspi, who subdued the inhabitants of almost all the islands, their conversion from barbarism and paganism being undertaken by the Augustinian friars in Legaspi's train. In 1762 the capital of the Spanish colony was occupied by a British force, but in 1764 the newly-acquired territory was restored to Spain. In the nineteenth century there were frequent disturbances in the islands, and at the outbreak of the Spanish-American War of 1898 a rebellion was at its height under Aguinaldo, a native leader, whose assistance was secured by Admiral Dewey, the commander of the American Pacific fleet, after the annihilation of the Spanish vessels in Manila Bay on May 1, 1898. Manila was captured by the American troops under General Wesley Merritt on Aug. 13, 1898, and the Islands were ceded to the United States by the *Treaty of Paris* of Dec. 10, 1898.

In 1920 the Philippine Scouts consisted of 234 officers and 8,360 enlisted men; there were also in the Islands on April 1, 1920, 538 officers and 13,223 enlisted men of the regular and emergency forces of the U.S. The Philippine constabulary consists of 374 officers and 6,352 enlisted men. All the enlisted men in the scouts and constabulary (and almost all the officers) are natives of the Islands.

The income of the Philippine Government was \$40,500,000 in 1920, the bonded Debt being \$22,000,000. The expenditure on Education in 1920 amounted to \$6,869,655; the University had an enrolment of 4,130 students, and there were 935,678 pupils enrolled in the public

schools. The principal exports are hemp, coconut oil, sugar, and tobacco; the imports being cotton manufactures, and iron and steel manufactures. The trade in 1920 was valued at \$151,000,000 for exports and at \$149,500,000 for imports, 62 per cent. of the imports being from U.S. and 70 per cent. of the exports being taken by U.S. Sugar was the principal article of export in 1920, being valued at \$49,620,000, Manila hemp \$36,000,000, coconut oil \$23,270,000, and tobacco \$12,720,000.

Towns.—Capital, Manila, in the island of Luzon; population (Dec. 31, 1918), 283,613. The next largest towns are Cebu (63,500), Albay (53,105), and Iloilo (49,808); there are several others with populations from 25,000 to 40,000.

GUAM.

Guam, the largest of the Ladrone or Marianne Islands in the North Pacific Ocean, lies in $13^{\circ} 26'$ N. lat. and $144^{\circ} 39'$ E. long., at a distance of about 1,506 miles east of Manila, the capital of the Philippine Islands, and forms a naval station between that dependency and the United States. The area of the island is estimated at 225 square miles, with a population on July 1, 1920, of 14,724, of whom 13,698 are classed as native, 478 of the naval station, and 548 other than native. The natives are of Chamorro stock, mingled with Filipino and Spanish blood. The language is a Malay dialect containing many Spanish words, but English is fast becoming the language of the island.

CAPITAL, Agaña. Port of entry, Apra.

Governor, Capt. I. C. Wettengel, U.S.N.

PUERTO RICO.

Puerto Rico (Rich Harbour) is an island of the Greater Antilles group in the West Indies, and lies between $17^{\circ} 50' - 18^{\circ} 30'$ N. lat. and $65^{\circ} 30' - 67^{\circ} 15'$ W. long., with a total area of 3,606 square miles and a population of 1,297,772 at the census of 1920. Almost all the inhabitants are Roman Catholics. The island is about 100 miles from west to east, and 40 miles from north to south at the western end, narrowing towards the eastern extremity. The capital is 1,400 miles distant from New York, and 982 miles from Key West. Sugar is grown in the low-lying districts, and tobacco and coffee on the slopes of the hills; fruits, cotton, maize, sweet potatoes, rice, and yams are also grown. The trade is principally with the U.S. About 340 miles of railroad were in operation in 1919, and there are good harbours at San Juan and Ponce. The capital, San Juan, had 70,707 inhabitants in 1920, other towns being Ponce (41,561), Mayaguez (19,069), Arecibo (10,039), Bayamon (10,411), and

Caguas (12,154). The legislative functions are vested in a legislature which consists of 2 elective houses; the Senate, composed of 19 members (2 from each of the 7 senatorial districts and 5 senators at large), and the House of Representatives, composed of 39 members (1 from each of the 35 representative districts and 4 elected at large). The term of the Legislature is 4 years.

Governor, E. Mont. Reiley\$10,000

TUTUILA, AMERICAN SAMOA.

Under an agreement between Great Britain, the United States and Germany* (proclaimed Feb. 19, 1900), the first-named Power abandoned all claims to the islands of the Samoan Archipelago, which were then divided between the United States and Germany, the islands east of 171° W. long. being taken over by the U.S. The territory thus acquired consists of the island of Tutuila, Anuuw, Ofu, Olosenga, Tau, and Rose Islands, with a total area of about 56 square miles and a population of 8,058 in 1920.

Tutuila, the largest of the group, has an area of about 40 square miles and a population of 6,185, and contains a magnificent harbour at Pago Pago, the capital and seat of government. The remaining islands have an area of about 16 square miles and a population of about 2,000, Rose Island being uninhabited. Copra is the only export of importance.

Governor, Captain Edwin Taylor Pollock, U.S.N.

WAKE AND JOHNSTON ISLANDS.

The flag of the U.S. was hoisted on Wake Island in 1899, and three other islands in the Pacific have been annexed (Johnston, Palmyra, and Midway).

ALEUTIAN ISLANDS.

The *Aleutian Islands*, or Catherine Archipelago (also known as the Santa Barbara group), lie westward of the district of Alaska, and consist of four groups of islands (Fox, Andreanof, Rat, and Near Islands) between 52°-53° N. lat. and 172° E.-163° W. long. They have a population estimated at 2,000. The principal settlement is at Iliuliuk, on Unalaska Island. The group forms a part of the district of Alaska, and was transferred to the U.S. by Russia in 1867.

VIRGIN ISLANDS.

The three islands, St. Thomas, St. John, and St. Croix, in the Virgin Island group, West Indies, formerly the possessions of Denmark, were purchased by the United States from Denmark for the sum of \$25,000,000, and proclaimed, January 25, 1917. The total area of the islands is 132 sq. miles, with a population in 1917 of 26,051. *St. Thomas* (28 sq. miles) has a population of 10,191; *St. Croix* (84 sq. miles) has a population of 14,901, the capital being Christiansted (or Bassin); *St. John* (20 sq. miles) has a population of 960, the capital being Cruz Bay. *St. Croix* exports sugar and cotton. In *St. Thomas* there are 10 public and 1 parochial school, 1,850 pupils and 52 teachers; in *St. Croix*, 9 public and 4 parochial schools, 2,000 pupils and 48 teachers; in *St. John*, 5 public schools, 182 pupils and 9 teachers.

The revenue is derived from customs, income tax, ground and building tax, trade tax, &c.

The estimated revenue for year ending June 30, 1921, Francs 721,816. There is a regular weekly service from New York to St. Thomas, and from Porto Rico to St. Thomas and St. Croix. The islands of St. Thomas and St. Croix possess wireless installations.

CAPITAL, St. Thomas, contains one of the finest harbours in the West Indies, accommodating vessels of large draught, and has a large coaling and oil refueling station.

Governor of the Virgin Islands, Rear-Adm. Sumner E. W. Kittelle, U.S.N.

Secretary, Lieut.-Comm. J. J. Gaffney (S.C.), U.S.N.

THE PANAMA CANAL.

The first suggestion for a canal across the Isthmus of Panama was made by a Spanish engineer in 1530, and surveys were actively engaged upon by various private companies between the years 1825 and 1890. In 1876 a concession for the construction of a canal was granted to a French promotion corporation, which conducted surveys during a period of two years, and reported to an international congress held at Paris in May, 1879, over which Ferdinand de Lesseps presided. This congress advised the construction of a canal at sea-level, and in 1881 the work was undertaken by the Universal Inter-oceanic Panama Canal Company, of which de Lesseps was nominal head. After two years of preparatory work, the first excavation was made on January 20, 1883. The amount of work to be accomplished proved to be greater than was estimated, and the conditions under which it was carried on more embarrassing. Sickness, interference of local officials, and mismanagement by the administration in Paris, resulted in the failure of the company, and a receiver was appointed in 1889. Under direction of the French courts a new company was formed to carry on the work, and, after a period of surveys, excavation was resumed in 1894. This was continued until May 4, 1904, when the United States Government took possession of the effects of the French company in Panama.

The interest of the United States in a canal across the Isthmus dates from 1825, and surveys under the auspices of that Government, or of companies organised in the United States, have been made at every available point between the Isthmus of Tehuantepec and the Atrato River. Actual construction, by an American company, of a canal across Nicaragua was begun in 1890, and abandoned in 1893, when the company failed for lack of funds. The failure of this company influenced the United States Government to take an active interest, and a commission was appointed in 1895 to make further studies and investigations. As a result of these investigations, the Congress of the United States authorised the President in 1902 to purchase the effects of the French company in Panama for \$40,000,000. Meanwhile, a treaty was negotiated with the Government of Colombia for the cession, upon payment of \$10,000,000, of the territory through which the canal was to be constructed. The failure of the Colombian Government to ratify this treaty led to the secession of Panama on November 3, 1903. The new Government was immediately recognised by the United States, and a treaty was signed on February 26, 1904, in which rights of sovereignty over a strip of land ten miles in width, extending across the Isthmus, were ceded to the United

* Under the Treaty of Versailles, 1919, the German Samoan Islands were allocated to New Zealand.

States. The canal is built through the centre of this territory. In 1922 a treaty between Colombia and the U.S. provided for the payment to Colombia of \$25,000,000 in satisfaction of all claims arising out of the Canal controversy. The independence of Panama was recognised by this treaty.

Two years were spent by the United States Government in sanitation, the assembling of plant, and organisation and housing of a labour force; after which operations on a large scale were begun on all parts of the canal.

Including the purchase of rights, payments to Panama, and construction and operation of the canal and its adjuncts, the total appropriations by Congress to June 30, 1922, were \$452,157,414. Tolls and other revenues, from its opening until June 30, 1922, amounted to \$58,117,186. During the past two years they have averaged approximately \$11,860,000 a year, or about \$988,400 a month.

The canal is fifty statute miles long (43·84 nautical miles), and the channel is from 300 to 1,000 feet wide at bottom. The least width is in Culebra Cut, and the greatest in Gatun Lake, where the channel can be made much broader at any time by the cutting down of trees and a small amount of dredging. The water depth when the surface of Gatun Lake is at 85 feet above sea-level varies from 85 feet in some parts of Gatun Lake to 41 feet in the Atlantic entrance. The depth through Culebra Cut is 45 feet.

There are three essential parts: a lake formed by damming the Chagres River, and two channels leading from the Atlantic and Pacific Oceans to this lake. The surface of the lake is normally at 85 feet above sea-level, and the channels connecting it with the sea are at sea-level. Ships are lifted from the sea-level channels to the lake, or lowered from the lake to sea-level in locks. These locks have a usable length of 1,000 feet, width of 110 feet; least depth of water over the sills when lake is at normal level, 41½ feet. These dimensions limit the size of ships using the canal. The dam which forms the lake is situated at Gatun, about seven miles inland from the Atlantic. It is built of earth, with an impermeable core of fine sand and clay, and is 1½ miles long, half a mile wide at bottom, and 100 feet at the top, which is 205 feet above sea-level. The lake is known as Gatun Lake, and is 164 square miles in area. At its southern end is Culebra Cut, the channel through the continental divide. This is the most extensive excavation ever made. The French canal builders dug about 18,600,000 cubic yards out of this section of the canal, and the Americans have completed an excavation that amounts to over 130,000,000 yards. The total excavation for the whole canal is about 266,000,000 cubic yards, about 130,000,000 yards of which have been excavated in the dry and the balance by dredges. The amount of concrete used in the locks is 4,500,000 cubic yards.

The administrative organisation for the canal is known as "The Panama Canal," with the Governor of the Panama Canal (Col. Jay J. Morrow, U.S.A., retired) at its head. The Governor reports to the President, who has delegated the Secretary of War to have supervision over the canal for him. The Governor of the Panama Canal is President of the Panama Railroad.

In connexion with the construction and opera-

tion of the canal, extensive terminal and supply facilities have been constructed at both the Atlantic and Pacific entrances. These include marine and general repair shops, foundries, dry docks, five 1,000-foot steel and concrete piers, and a number of wharves, slaughter-houses, cold storage plants, ice plants, laundries, hospitals, coaling plants, fuel oil tanks and delivery plants, waterworks, commissary stores, storehouses of spare materials and ships' chandlery stores, and other accessories of great modern ports. An extensive transfer of cargo goes on at the Atlantic terminus of the canal, between ships plying the Atlantic and the Caribbean and ships which pass through the canal to or from Pacific ports. The 1,000-foot dry dock, with adjacent repair shops, at Balboa is an important assistance to shipping throughout the American tropics as well as a base for repairs for vessels of the Navy.

Health conditions are excellent, while the scenery is varied and attractive, with ruins of old Spanish towns and fortifications. Gatun Lake is studded with islands and surrounded by mountains. Shooting and tarpon fishing are excellent. The U.S. Government operates hotels at Colon and Ancon.

The number of commercial vessels passing through the canal in both directions in the fiscal year ending June 30, 1922, was 2,736, with a cargo tonnage of 10,884,910 tons, of 2,240 pounds. The total of commercial ships passing through the canal in the first seven years of its operation, from August 15, 1914, to June 30, 1922, was 15,835, of 56,065,733 net tons, Panama Canal measurement, carrying 61,348,406 tons of cargo.

ABYSSINIA or ETHIOPIA.

Empress, Waizeru Zauditu (daughter of late Emperor Menelek), born 1876; elected Sept. 27th, 1916.

Her. H.H. Ras Taffari Makonnen, G.C.M.G. (Cousin of the Empress).

The area of Abyssinia and its dependencies is estimated at 350,000 square miles, with a total population of 7,000,000, of whom about one-half are Abyssinians and the remainder Gallas, negro tribes on the west and south frontiers, and Danakils and Somalis on the east. The political neighbours are the Sudan, the Italian colony of Massowah (Eritrea), the French colony of Djibuti, British Somaliland, Italian Somaliland, Kenya Colony and the Uganda Protectorate.

Abyssinia is volcanic and mountainous. It contains some mineral wealth; iron and coal are not uncommon, and gold is washed in various streams, while salt, saltpetre, and sulphur are also procurable. The lower country and deep valley gorges are very hot; the higher plateaus are well watered, with a genial climate. In the hotter regions, sugar-cane, cotton, coffee, rubber, &c., flourish; in the middle zone maize, wheat, barley, wild oranges and other fruit trees, tobacco, potatoes, &c., are cultivated; and above 6,000 feet are excellent pastures with some corn cultivation. There are two seasons in the year, a dry winter and a rainy summer from June to September. The chief river is the Blue Nile, issuing from the Tsana lake; the Abbara and many other tributaries of the Nile also have their rise in the Abyssinian highlands. Horses, mules, donkeys, oxen, goats, and sheep, and camels in the lowlands, form a large portion of the wealth of the people.

The Abyssinians are Christian (a branch of the Coptic Church), and their rulers claim descent from Menelek, the son of Solomon by the Queen of Sheba. There is no popular literature, and little education. The potential

army numbers at least 300,000, armed with rifles. The principal pursuits are agriculture and cattle breeding. The chief exports are coffee, civet, wax, hides, rubber, ivory, and gold. The total trade is valued at about £2,000,000 for imports and exports, but it suffered severely during 1921 from the prevalent depression. The import duty on all goods at Gambela is 10 per cent. *ad valorem*, and at Dire-Dawa and Harrar 8 per cent. *ad valorem*; in the interior the duty is variable, and 3 per cent. addition is imposed on goods brought to the capital. A railway (495 miles) has been built under French auspices from Jibuti to the capital, *via* Dire Dawa. The posts and telegraphs are under French management. The principal towns besides Addis Ababa, are Adwa (the capital of Tigré), Gondar, Debra-Markos, Saiyu, Aksum, Antalo, Ankober, Goré, Dembecha, Ijube, Jimma, and Harrar. There are ancient architectural remains at Aksum, Gondar, and Ankober; modern architecture is very poor.

CAPITAL, Addis Ababa (population fluctuates, but is ordinarily about 50,000). Harrar, in Eastern Abyssinia, has a population of about 45,000.

Imports from U.K. (1921) £54,207

Exports to U.K. (1921) 4,800

FLAG: Green, red, yellow.

BRITISH LEGATION.

Envoy Extraordinary, Minister Plenipotentiary and Consul-General, C. F. W. Russell

(1920) £3,400

Vice-Consul & Oriental Secretary, Ph. C. Zaphiro, C.M.G.

Secretary to Minister, J. Lawson Johnston.

BRITISH CONSULAR OFFICERS.

Addis Ababa—Consul, Maj. J. H. H. Dodds, C.M.G. Vice-Consul, C. H. Kane (acting).

Harar—Consul, C. H. F. Plowman.

N.W. Ethiopia (Dangila)—Consul, A. D. Home.

Southern Ethiopia (Mega)—Consul, Capt. Arnold W. Hodson.

Western Ethiopia (Gore)—Consul, C. H. Walker, M.B.E.

S.W. Ethiopia (Magi)—Consul, Maj. E. B. Hawkins, D.S.O.

Adis Ababa is 500 miles from Zaila, *via* Harar; letters from London are from 20 to 24 days in transit if the mail connects with steamer service from Aden; train from Djibouti takes 3 days; caravans take from 35 to 45 days.

AFGHANISTAN (see p. 629).

ALBANIA.

(Shkiperia.)

Regents, Refik Toptani (Sunni Moslem); Sotir Peci (Orthodox Catholic).

President of the Council of Ministers (Dec. 22, 1921), Djafer Ypi.

Minister of Foreign Affairs, Pandeli Evangheli.

Minister in London, H.E. Mehmed Konitza, 8 Onslow Gardens, S.W. 7.

Consul-General, Capt. H. Lyon Thomson, 34, St. James's Street, S.W. 1.

Albania (the former Turkish Provinces of Scutari and Yanina, and parts of Kossovo and Monastir) lies on the west of the Balkan peninsula of south-eastern Europe, the western boundary being the Adriatic; total area about 20,000 sq. miles; total population estimated (1922) at 1,000,000. The political neighbours are, on the north and east Yugo-Slavia, and on the south-east and south Greece. Albania was declared independent by a National Assembly at Valona, Nov. 28, 1912, and its independence was confirmed by the *Treaty of London* of Dec. 20, 1912. The first King of Albania (Prince William of Wied) abandoned the throne in Sept. 1914, and during the Great War the country was invaded by troops of the Central Powers and of the Allies. After the Armistice (Nov. 11, 1918) a National Council at Durazzo established a provisional government. The independence of the country was guaranteed by the Supreme Council of the Allies. The government is exercised by Regents, representative of the various religious bodies, the executive being entrusted to a council of Ministers, responsible to the elected diet. The principal towns are Tirana (the capital), (pop. 12,000); Scutari (pop. 32,000); Elbasan (pop. 13,000); Berat (pop. 8,500); Korytza (pop. 18,000); Durazzo (pop. 5,000); and Valona (pop. 7,000). Cattle rearing and agriculture (grain and tobacco) are the principal industries and there is some mineral wealth.

British Envoy Extraordinary, Minister Plenipotentiary and Consul-General, Harry Charles Augustus Eyres (1922), Durazzo. (And local allowance, £300) £1,200.

ANDORRA.

A miniature Republic in the Pyrenees, with an area of 175 sq. miles, and a population of 5,500; it is under the joint suzerainty of France and Spain. There is a Council of Twenty-four, elected by certain of the inhabitants, a judge, and two lay vicars appointed by France and the Spanish Bishop of Urgel.

ARABIA.

Arabia is a peninsula in the south-west of the Asiatic continent, forming the connecting link between Asia and Africa, and lies between 30° 30'—60° E. long. and 12° 45'—34° 50' N. lat. The north-western limit is generally taken from Akaba, at the head of the Gulf of Akaba, to a point in the Syrian Desert about 150 miles north-east, and thence northwards to a point about 50 miles due east of Damascus. The remaining land boundaries are in the form of a horse-shoe, encompassing the Syrian Desert, and descending in a south-easterly direction to the head of the Persian Gulf, and thus excluding the whole of Mesopotamia and the Euphrates Valley. The other boundaries of Arabia are the Red Sea and Gulf of Aden, the Arabian Sea, and the Persian Gulf and Gulf of Oman. Generally speaking, the peninsula consists of a plateau sloping from south-west to north-east towards the Euphrates Valley, except that the broad south-eastern promontory, which encloses the Persian Gulf, contains a coastal range in the Sultanate of Oman.

The total area is estimated at 1,200,000 sq. miles (of which nearly one-half is occupied by the Syrian, Nafud, and Dahna deserts), and the total population is believed to be about 5,000,000.

The organization of the Native States of Arabia is to be developed under British auspices, the principal rulers (the King of the Hejaz and the Imam of Yemen) being subsidised under certain conditions (control of foreign relations by British advisers and maintenance of internal peace by native rulers). The various Arab States are shown below:—

THE KINGDOM OF THE HEJAZ.

King of the Hejaz, El Hussein ibn Ali.

On June 5, 1916, the Grand Sherif of Mecca (hereditary Keeper of the Holy Places) threw off the Turkish allegiance and declared the independence of the former vilayet of Hejaz. In concert with the British Imperial forces under General Allenby, the armies of the King of the Hejaz (under the leadership of the Emir Feisal) penetrated northward, through the districts E. of the Jordan, to Damascus, and the territories of the new kingdom extend from Asir (see below) in S. to Palestine and Syria in N., and from the Red Sea, the Gulf of Akaba, and Palestine in the W. to the ill-defined boundaries of Central Arabia.

Parallel with the Red Sea coast runs the Tehama range (Jebel Shar, or Mount Seir, 7,000 feet, and Jebel Radhwa, 6,000 feet). On the coast are the small ports of Muwela, Damgha el Wihj, Yanibo, Rabigh and Jeddah (the chief port of the country and the pilgrims' port), which contains the reputed "tomb of Eve, the mother of mankind"; and inland are many settlements through which runs the Hejaz Railway. The *Oasis of Khairar*, east of the railway, contains a considerable population, descendants of former negro slaves, with a Jewish centre at Kasr el Yahudi. The importance of the Kingdom of the Hejaz depends upon the pilgrimages to the holy cities of Medina and Mecca. *Medina* (*Al Medina*, "The City"), 820 miles by rail from Damascus, and the present terminus of the Hejaz Railway, has a permanent population of about 20,000, and is celebrated as the burial place of Muhammad, who died in the city on June 7, 632 (12 Rabi'a, A.H. 11). The Mosque of the Prophet (500 feet in length and over 300 in breadth) contains the sacred tomb of Muhammad. *Mecca*, the birthplace of the Prophet, is 55 miles east of the seaport of Jeddah, by road, and about 200 miles south of Medina, and has a fixed population estimated at 60,000. The city contains the great mosque surrounding the *Kaaba*, or sacred shrine of the Muhammadan religion, in which is the black stone "given by Gabriel to Abraham," placed in the south-east wall of the Kaaba at such a height that it may be kissed by the devout pilgrim. *Jeddah*, the principal port, has a considerable trade in hides, mother-of-pearl, coffee and carpets.

The *Hejaz Railway* runs from Medina in S. through the Syrian Desert to Damascus and Beirut, and is connected with the projected Baghdad Railway at Aleppo. The total area under the rule of the King of the Hejaz is about 112,500 sq. miles, with a population of from 350,000 to 400,000, including many nomad tribes.

CAPITAL, Mecca (pop. 60,000).

THE EMIRATE OF NEJD AND HASA.

Emir, Abd-el-Aziz es Saud, K.C.I.E.

This former vilayet was in the 18th century an independent Empire of the Wahabites, and has reasserted its autonomy under a representative

of the former dynasty. It is known as "the true home of the Arab," and extends across the oases of Central Arabia, from the eastern boundary of Hejaz to the Persian Gulf. During military operations in 1913, the Emir of Nejd captured Hufuf (the capital of El Hasa), and extended his rule over the former Turkish province of El Hasa. The capital, Riyadh, is a station on the Pilgrims' trans-Arabian caravan route from El Hasa to Mecca, and contains a large mosque, the "Westminster Abbey" of the Wahabi Moslems. The principal trading centre is Anaila, in the central province of Qasim (Nedj). The principal port on the Persian Gulf is El Katif, on Bahrein Bay (El Hasa).

THE PRINCIPALITY OF KOWEIT.

Ruler, Sheikh Salim ibn Mubarak, C.S.I.

Koweit has been semi-independent for many years, and is in treaty relation with British India. It extends along the shore of the Persian Gulf from Mesopotamia to Nejd (El Hasa). The important harbour and gulf port of Koweit, the capital (pop. 25,000), is an entrepôt for goods for the interior, and for the export of horses, pearls, dates, wool, &c. It was designated as the terminus of the Berlin-Constantinople-Baghdad railway as originally projected in 1903.

Political Agent, Major J. C. More, D.S.O.

THE SULTANATE OF OMÂN.

Sultan, Seyyid Taimur bin Faisal, born 1886, suc. 1913.

Omân (area 82,000 sq. miles, estimated pop. 550,000) is a Muhammadan State in S.E. Arabia with a coast-line of about 1,500 miles along the Persian Gulf, the Gulf of Omân, and the Arabian Sea from El-Katar to Ras Sair. The country, much of which is arid and desert, attains in Jebel Akhdhar an elevation of 10,000 feet. The population is chiefly Arab, but includes also a considerable foreign element—Indians, Persians, Baluchis and Swahili negroes. The Sultan is in treaty relations with, and subsidised by, the Government of India, who have a political agent at his capital. In 1913, at the end of the reign of the last Sultan, the tribes of the Interior rose in rebellion, and, having elected their own Imam or Spiritual Ruler have since administered the whole of Omân proper, the efforts of the Sultan to establish his control having been, up to date, unsuccessful. This rebellion has, with the war, interfered with the prosperity of the country. The Sultan is pledged not to cede territory to any Power but the British Government. Muscat has a considerable trade, amounting in 1916-17 to £408,046, and in 1917-18 to £323,915, a decrease owing to interior disturbances due to the war. Dates are the chief export, and rice, wheat, coffee, cotton and silk goods the chief imports. The capital, Muscat, has an estimated population of 24,000.

Muscat—British Consul and Political Agent, Maj. M. E. Rae.....per mensem Rs. 2,250

THE EMIRATE OF JEBEL SHAMMAR.

Emir, Abdullah ibn Mitab er Rashid.

Jebel Shammar is a Bedouin community of Central Arabia, extending across the oases from Hejaz on the west to Koweit on the east, with Nejd as a southern neighbour. Its boundaries are indeterminate, and the total population in allegiance to the Emir is believed to be about 200,000. The capital is Hail, between the two Shammar ranges (Jebel Aja and Jebel Salma) with a population of about 12,000.

THE IMAMATE OF ASIR.

Imam, Muhammad Hamid ed-Din.

The territory of the Idrisi (who claims the Imamate of Asir and part of Yemen), extends along the Red Sea littoral, approximately from Hali Point to Loheia. It includes part of Asir, part of Yemen and the Farsan Islands, and extends inland to the Dahna Desert. The maritime lowland is interspersed with fertile areas near the wadis, which afford pasturage and bear grain. The capital is Sabia, a small inland town.

THE IMAMATE OF YEMEN.

Imam of Sana'a, Yahya Muhammad Hamid ed-Din.

Yemen occupies the S.W. corner of the Arabian peninsula, between the Imamate of Asir and the British dependency of Aden, with an estimated area of 74,000 sq. miles and a population of 600,000 to 700,000. It was formerly divided into the vilayets of Sana'a, Tais, Asir and Hodeida, and it extends inland to the Dahna Desert and to the tribal territories of Hadramut. Part of Yemen is now included in the territories of the Idrisi (Imam of Asir), and of the remainder the greater part is under the rule of the Imam of Sana'a. On the plateau between the coast and the Dahna Desert (a district known as *El Jebel*) are the most fertile parts of Arabia, where wheat, barley, millet and coffee are extensively grown. The sea port of *Mocha* has become associated with the coffee export trade, but in this trade (and in all others) it is of secondary importance to *Hodeida*. The trade of Yemen probably exceeds that of the remainder of Arabia. The capital is the walled city of Sana'a (pop. 20,000), and about 70 miles to the S. of the capital is Dhamar, an ancient seat of learning, and the headquarters of the Zaidi sect of the Muhammadans.

THE HADRAMUT TRIBES.

The coastal region of Southern Arabia, between Yemen and Aden on the west and Oman on the east, and extending inland (northwards) to the Dahna Desert, contains a coastal strip of some 550 miles. Parallel with the coast (at a distance of 50 miles from the Arabian Sea) is an extensive plateau inhabited by the Hadarim, an ancient people of Arabian stock (Hadoram was the son of Joktan, *Genesis* x., 27). There are many settlements on the coast and in the interior, but the latter are being steadily enveloped by the sand of the northern desert. There are sacred shrines near Kasm (Kabr Hud) and Shibam (Kabr Sâlih). The eastern districts, known as Mahra and Gara, are very sparsely populated. The estimated area of Hadramut is 82,000 sq. miles, and its Muhammadan population, of independent Arab tribes, is estimated at 150,000. The most important Coastal Chief is the *Sultan of Shahr and Mokalla*, K.C.I.E., who is in treaty relations with Great Britain. Inland, the most important tribe is the Kathiri, whose chief towns are Sey yem and Terim. The Kathiri are noted as travellers and traders, and many of them are settled and carry on commerce at Singapore and Java. A long-standing feud between the Kathiri and the Ka'iti (by whom the former were expelled from the coast) was settled by treaty in 1910 on the initiative of the Aden Government. Under this Treaty the Ka'iti *Sultan of Mokalla* permits access to the port of Mokalla on the part of Kathiri traders.

Agriculture and cattle raising are the principal industries, together with the cultivation of dates, indigo and tobacco.

ARGENTINE REPUBLIC.

(República Argentina.)

President (1922-28), Dr. Marcelo T. de

Alvear, *assumed office*, Oct. 12, 1922.....\$96,000

Vice-Pres. (1922-28), Dr. Elpidio Gonzalez 36,000

Minister of the Interior, Dr. José Nicolás Matienzo.

Foreign Affairs, Dr. Angel Gallardo.

Finance, Dr. Rafael Herrera Vegas.

Justice and Public Instruc., Dr. Celestino Marco.

Agriculture, Dr. Tomás A. Lebreton.

War, Col. Agustín P. Justo.

Marine, Adm. M. D. García.

Public Works, Dr. Eufrosio S. Loza.

Minister in London, Señor Dr. J. Evaristo Uriburu, 26 Park Lane, W. 1.

First Secretary and Counsellor of Legation (and *Chargé d'Affaires ad interim*), Señor Don Paulino Llambi Campbell.

First Secretary and Counsellor of Legation, Señor Don Luis Domínguez.

Second Secretary, Señor Don Carlos Miguens.

Naval Attaché, Capt. Diego G. García.

Financial Secretary, Señor Don Carlos Domínguez.

Consul-General, Dr. Sergio García Uriburu,

7 Gower Street, W. C. 1.

Asst. Consul, Don Horacio Fernandez Beschtadt.

There are also Consulates at Liverpool, Southampton, Cardiff, Manchester, Newcastle-upon-Tyne, Newport, and Glasgow; and Vice-Consulates at Aberdeen, Belfast, Birmingham, Bristol, and Hull.

Argentina is a wedge-shaped country, occupying the greater portion of the southern part of the South American Continent, and extending from Bolivia to Cape Horn, a total distance of nearly 2,300 miles; its greatest breadth is about 930 miles. It is bounded on the north by Bolivia, on the north-east by Paraguay, Brazil, and Uruguay, on the south-east and south by the Atlantic, and on the west by Chile, from which Republic it is separated by the Cordillera de los Andes. On the west the mountainous Cordilleras, with their plateaus, extend from the northern to the southern boundaries; on the east are the great plains, those in the north are thickly wooded and are known as *El Gran Chaco*, and further south lie the treeless pampas, which together constitute *La Plata*, extending from the Bolivian boundary in the north to the Rio Negro; and south of the Rio Negro are the vast plains of Patagonia. Argentina thus contains a succession of level plains, broken only in Cordoba by the San Luis and Cordoba ranges, and in the north-western states by the eastern spurs of the Andes. The Paraná River, formed by the junction of the Upper Paraná with the Paraguay River, flows through the north-eastern states into the Atlantic, and is navigable throughout its course; the Pilcomayo, Bermejo, and Salado del Norte are also navigable for some distance from their confluence with the Paraná. In the Province of Buenos Aires the Salado del Sud flows south-east for some 300 miles into Samborombon Bay (Atlantic). In the south the Colorado and Rio Negro rise in the extreme west and flow across the pampas into the Atlantic, many similar streams in Patagonia (notably the Chubut and Santa Cruz) traversing the country from the Andes to the Atlantic.

The Republic is composed of 14 provinces and 20 territories, comprising in all about 1,132,000 square miles, with a population of 8,462,030 in 1919. Immigration is encouraged, and comes principally from Spain and Italy, but legislation, introduced in 1919, requires intending immigrants to produce certificates of good character and ability to work. The climate is moderate and healthy. Spanish is the language of the country.

Government.—The estuary of La Plata was discovered in 1515 by Juan Díaz de Solís, but it was not until 1534 that Pedro de Mendoza founded Buenos Aires. In 1810 Spanish rule was overthrown, and in 1818 the independence of Argentina was complete, although not acknowledged by Spain until 1824. In 1853, after more than thirty years of disturbances and civil wars, the country settled down, and is now a well-governed and progressive Republic. The constitution dates from 1853 (revised 1859) and is modelled on that of the U.S. of America, but each province enjoys practically complete autonomy. The executive is in the hands of the President, who selects his Cabinet. The National Congress consists of a Senate of 30 members and of a House of Deputies of 160 members. Members of Congress receive \$9,000 per annum.

Production.—Of the total area about one-third is suitable for agriculture and cattle raising, and vast tracts are held by the Federal Government for sale or lease to colonists. The principal productions are wheat, maize, oats, linseed, sugar, wine, wool, hides, cattle, sheep, and horses. The yield of the harvest of 1921-22 was 4,600,000 tons of wheat, 910,000 tons of linseed, and 478,600 tons of oats; there were in 1914 25,866,763 cattle, 43,225,452 sheep, 8,323,815 horses, 565,069 mules, 4,325,280 goats and 2,900,585 pigs, the total value being placed at £1,130,000,000. The export of frozen beef and mutton is an important industry. The exports are made up entirely of pastoral and agricultural products, with the exception of quebracho, copper, manganese, and wolfram. In 1920, there were 4,500 registered wine presses, handling about 600,000 tons of grapes, the output in 1919 being over 4,000,000 hectolitres (88,222,000 gallons). The export of wine to neighbouring South American States is increasing annually, and the importation of wine has almost ceased.

Communications.—There were (1919) 22,121 miles of railroad open. The railroads are almost entirely in the hands of British companies, and absorb about £234,000,000* of British capital. Telegraphs about 43,153 miles, mostly Government lines. There are 22 wireless stations, of which one is reserved for communication between England and the Argentine. The principal ports are Buenos Aires, Rosario, La Plata, and Bahía Blanca. The number of steam and sailing merchant vessels from overseas ports which entered Argentine ports in 1921 was 1,308 of a total tonnage of 4,321,200.

Defence.—The Navy consists of 2 super-Dreadnought battleships, 2 river monitors, 4 armoured cruisers, 3 cruisers (old), 4 torpedo gunboats, 7 destroyers, and 2 first class and 6 second class torpedo boats. Strength about 5,000 men. There is a naval post at Bahía Blanca. The National Militia has a peace footing of about 30,000, with reserves of 250,000; on a war footing the Army would comprise 3 divisions of 20,000 each.

* A total of about £400,000,000 British capital is invested in the Argentine.

Education.—Primary Education is secular, free and nominally compulsory from the ages of 6 to 14, but only some 45 per cent. of attendances are secured. Secondary Education is controlled by the Federal Government in lyceums and normal schools, with an average attendance of 6,000. There are also *Special Government Schools*—1 naval, 1 military, 1 mining, and 1 agricultural. There are *National Universities* at Cordoba and Buenos Aires, and *Provincial Universities* at La Plata, Santa Fé, and Paraná.

ARMENIA.

(Hyastan.)

President of the Armenian Soviet Republic, M. Myasnikov.

Foreign Affairs Commissar, M. Mravyan.

Armenian Representative in London, Maj.-Gen. Bagratuni.

Armenia occupies the uplands between the Iranian plateau and Asia Minor, and is bounded by the Black Sea and the Republic of Georgia on the N., by Kurdistan on the S., by the Republic of Azerbaijan on the E., and by Turkish Asia Minor on the W., and until the outbreak of the War of 1914-18 it was shared between Turkey (35,600 sq. miles), Russia (20,587 sq. miles), and Persia (6,518 sq. miles). The country possesses great historical interest as the reputed seat of the oldest civilised people in the world. The inhabitants have always possessed definite racial characteristics, but have seldom been politically independent, the country having been held successively by the Medes, Persians, Greeks, Romans, Arabs, and Turcoman-Tartars until 1514-1538, when the greater part became a province of the Ottoman Empire. The Eastern part remained under Persian rule, but in 1828 Russia obtained the larger share of non-Turkish Armenia. The rivers Euphrates, Tigris, Aras, Kur, and Tchorkh take their rise within its boundaries, and at the meeting of the former Turkish, Persian, and Russian boundaries is *Mount Ararat* (17,160 feet), the traditional resting place of “Noah’s Ark.” In the uplands the climate is severe, but in the valleys and plains the soil is fertile, producing all kinds of cereals, cotton, rice, sesame, hemp, flax, and tobacco. Sericulture (silkworm breeding), sheep-breeding, and fruit growing are capable of great development. Armenia has great mineral resources hardly as yet developed. Naphtha, sulphur, bitumen, and nitre abound, while the mountains yield salt (mineral and in solution), gold, silver, copper, lead, iron and valuable marbles; there are also numerous hot and cold mineral springs (similar in nature to those of Vichy). The Armenian Church is the oldest established Christian church, Christianity having been recognised as the State religion in 300, and from the 5th century there is a national language and literature. On account of their religion the Armenians have suffered a general persecution by Islam, particularly in the *vilayet* of Sivas, Bitlis, Diarbekir, Mamuret-el-Aziz, Van, and Erzerum, where massacres have frequently been organised with a view to extermination. In 1915-17 there were wholesale deportations and massacres of the Christian population of Turkish Armenia, while the Armenian Christians of Azerbaijan and of Russian Armenia were similarly treated by Turkish and Kurdish hordes. In 1918, during the Russian Revolution, an independent “Republic of Trans-Caucasia” was formed by the union of Georgia, Armenia, and Azerbaijan, and on the dissolution of the union (June 1, 1918) the Supreme Council of the Allied Powers recognised the independence of the *Republic of Armenia* (area, 20,587 sq. miles, population 2,000,000). Under the Treaty of Peace

with the Allies (May 11, 1920), Turkey recognised the independence of Armenia, with its capital at Erivan. In 1920 a Bolshevik movement set up the *Armenian Socialist Soviet Republic*, on the lines of the Moscow government. The United States Government was requested by the Allies to accept a mandate for Armenia, but the Foreign Relations Committee of the Senate has declined the mandate.

For Debt Clearing, Dr. Felix Weiser.

Prior to the War the Austrian Empire, joined to the Kingdom of Hungary by the identity of sovereigns, was the largest Empire, next to Russia, on the continent of Europe, situated between 42°–51° N. lat. and 9° 30'–26° 20' E. long. It embraced an area of 240,456 sq. miles, and a population (1914) of nearly 53,000,000, and included Upper and Lower Austria; Bohemia; Bukovina; Carinthia, Carniola, Dalmatia, Görz and Gradiska; Istria, Moravia, Salzburg, Silesia, Styria, Trieste, Tyrol and Vorarlberg; with Bosnia and Herzegovina as administered territories. At the conclusion of the War, the territories of the Austrian Republic comprised an area of 31,756 square miles, with a population (1920) of 6,067,000.

On June 28, 1914, the assassination of the Austrian Archduke Francis at Serajevo (Bosnia) was presumed to be the outcome of a plot fostered by Serbia, and after negotiations an ultimatum was presented by the Empire to the Serbian Government (July 23), and non-compliance with its terms led to the European War of 1914–18. Before the armistice of Nov 11, 1918, Hungary had seceded from the "Dual Monarchy," and a Republic was declared Nov. 12, 1918, the throne being abdicated by the Emperor Karl (Nov. 28, 1918).

Under the *Treaty of St. Germain* (Sept. 10, 1919) the political neighbours of the Austrian Republic are the Republics of Germany and Czecho-Slovakia on the N.; the Kingdom of Italy, and the Yugo-Slav Kingdom on the S.; Switzerland on the W., and Hungary on the E.

Under the new Constitution (Nov., 1920), Austria became a Republican Federation of eight Provinces:—Lower Austria and Vienna, Upper Austria, Carinthia, Styria, Salzburg, Tyrol, Vorarlberg and Burgenland (West Hungary); the Bundesrat and Nationalrat were constituted; a government formed, and a President elected. The elections resulted in a majority for the

Christian Socialists over the *Social Democrats*, the *Pan-Germans* coming next in order. In June, 1921, the Ministry resigned in favour of a non-party Government, which gave way (May, 1922) to a Christian Socialist Pan-German Coalition Government under Doctor Seipel (a priest). There is a considerable body of opinion in favour of the inclusion of Austria in the German Reich and, on the other side, for a close alliance with Hungary.

Complete religious liberty is one of the fundamental laws of the new Republic. In 1915 the prevailing religion of the German-speaking people was Roman Catholic.

Finance.—Before the War Austria had a total indebtedness of about 14,400,000,000 crowns (£600,000,000), towards the annual cost of which (489,000,000 crowns) Hungary made a contribution of 61,000,000 crowns (24=£1 sterling). The indebtedness was increased by War credits (up to June 30, 1918) to £2,280,000,000, requiring an annual service of 4,335,000,000 crowns. The pre-war revenue was about 3,600,000,000 crowns (£150,000,000). The State finances have been going from bad to worse ever since the Armistice, owing to heavy deficits and incessant inflation. The deficit on the State Budget was estimated in July, 1922, at considerably more than one billion crowns, and by Oct., 1922, the exchange value of the crown had sunk to about one-fifteen-thousandth of its nominal value, £1 being equal to 325,000 crowns (in place of 24'22). The circulation on Sept. 30, 1922, was over two billion crowns. In September and October, 1922, the League of Nations worked out a scheme for the restoration of the Austrian finances within two years under the control of a High Commissioner appointed by the League, the Governments of Great Britain, France, Italy, and Czecho-Slovakia agreeing to guarantee four-fifths of a loan of 520,000,000 gold crowns (about £25,000,000) in order to fill the deficit in the Budget during the two years. Since the Armistice (Nov. 11, 1918), the British Government has advanced about £10,000,000 to the Republic.

Industries.—The principal industry is agriculture, the chief products being wheat, barley, oats, rye, maize, and potatoes. Forestry and stock raising are important. The forests are principally coniferous trees. The live-stock includes horses, cattle, sheep, pigs, and goats. The vine is extensively cultivated. The most important mineral production is that of iron ore, magnesite, and salt; there are also lead, zinc, copper, common and brown coal, and graphite. The principal manufactures are woollens, cottons, steel, wood-work, brewing, and machinery.

Communications.—In Sept., 1919, there were about 3,800 miles of railway (exclusive of narrow gauge lines). The mercantile marine was considerable in 1914, but the new Republic is land-locked.

Commerce.—The Commerce of the "Common Customs Territory" of the Dual Monarchy of Austria and Hungary amounted in 1913 to £140,000,000 for Imports and £115,000,000 for Exports, of which totals £5,000,000 (Imports from) and £7,000,000 (Exports to) represented the exchange with Great Britain. In 1921 Austrian imports were valued at £62,000,000 (£1,728,177 from Great Britain), and the exports at £35,000,000 (£700,000 to Great Britain). There is also a large entrepôt and transit trade at Vienna through S.E. Europe and the Balkans.

Defence.—During the War of 1914-18 about 5,000,000, all ranks, were passed into the common Army of Austria-Hungary. The total casualties exceeded 2,500,000, of whom over 700,000 were returned as killed. Under the *Treaty of St. Germain* the military, naval and air forces were demobilised and reduced to minimum requirements and all warships were surrendered to the Allies, those under construction being broken up. Service in the Republican Army is by voluntary enlistment for twelve years.

Towns.—Vienna, the capital, is situated on the River Danube; in 1919 it contained an estimated population of 2,000,000. Other large towns are Grätz (177,000), Linz (93,000), and Innsbruck (60,000).

AZERBAIJAN.

President of the Soviet of People's Commissars, M. Narimanof.

Commissar for Foreign Affairs, M. Gusseyonof.

Azerbaijan is a Transcaucasian Republic on the south-western shore of the Caspian Sea, extending from the Caucasus in the north to Persia in the south and from the Caspian on the east to Armenia and Georgia. The former Russian governments of Baku and Elisavetpol and part of the Erivan government are now included in the Republic. The Republic is in alliance with Soviet Russia against their "common enemy, the imperialistic bourgeoisie." The area is about 50,000 sq. miles, with a population estimated at 4 to 5 millions, of whom over 75 per cent. are Muhammadians.

The Capital is Baku (pop. 250,000) on the shore of the Caspian Sea, the centre of the petroleum industry. Baku is connected by railway with Batum (Georgia) on the Black Sea, via Tiflis, and with Moscow, via Rostov. Other towns are Elisavetpol (65,000), Derbent (35,000), Kuba and Shemakha.

The Republic has been formally recognised by the Allied Powers.

BELGIUM.

(Royaume de Belgique.)

King of the Belgians, Albert, born 8 April, 1875; succeeded his uncle, Leopold II., 17 Dec., 1909; mar. Oct., 1900, the Duchess Elizabeth of Bavaria, and has issue two sons, (1) the Heir Apparent; (2) Charles Theodore, b. 10 Oct., 1903; and a daughter, Marie-José, b. 4 Aug., 1906.

Consul, Glasgow, P. S. Dunn, C.B.E.

A Kingdom of Central Europe, with a total area (1920) of 11,392 square miles and a population (Census of 1919) of 7,577,027. Belgium is bounded on the N. by the Kingdom of the Netherlands, on the S. by France, on the E. by Germany and Luxemburg, and on the W. by the North Sea. The kingdom formed part of the "Low Countries" (Netherlands) from 1815 until Oct. 14, 1830, when a National Congress proclaimed its independence, and on June 4, 1831, Prince Leopold of Coburg was chosen hereditary king. The separation from the Netherlands and the neutrality and inviolability of Belgium were guaranteed by a Conference of the European Powers, and by the *Treaty of London* (April 19, 1839), the famous "Scrap of Paper," signed by Austria, France, Great Britain, Prussia, The Netherlands, and Russia. On Aug. 2, 1914, the Germans invaded Belgium and ultimately overcame the resistance of the fortresses and overran almost the whole country. In revenge for the heroism of its defenders the Germans sacked and destroyed many cities, burning Louvain (with its library), Termonde, and other places, and established a reign of terror. They levied a war contribution on Belgium of close on £1,000,000,000, apart from enormous fines on localities, firms, and private persons. On Friday, Nov. 15, 1918, at the great turn of the tide, Antwerp was re-occupied by the victorious Belgian army, and Brussels and the remainder of Belgian soil a few days later. About 10,000 persons were added in 1919 by the cession of Moresnet and part of Malmédy by Germany, and the district of Eupen, with the remainder of the district of Malmédy, were ceded by Germany and annexed by Belgium (Sept. 20, 1920) after a plebiscite, thus adding a further 50,000 to the inhabitants.

French and Flemish are the joint official languages, but while French is the language of the upper classes, Flemish is spoken by the majority, preponderating in Flanders, Limburg, and Brabant, including Antwerp. Nearly all the inhabitants are, at least nominally, Roman Catholics.

Belgium has a frontier of 821 miles, and a seaboard of 42 miles. The Meuse and its tributary the Sambre divide it into two distinct regions, that in the west being generally level and fertile,

whilst the table-land of the Ardennes, in the east, has for the most part a poor soil. The "polders" near the coast, which are protected by dikes against floods, cover an area of 193 sq. miles. The highest hill, Baraque Michel, rises to a height of 2,230 feet, but the mean elevation of the whole country does not exceed 536 feet. The principal rivers are the Schelde (Escaut) and the Maas (Meuse). Brussels has a mean temperature of 50° F. (summer 65°, winter 37°).

GOVERNMENT.—The constitution jointly vests the legislative power in the King, the Senate, and the Chamber of Representatives. The 120 senators (with the exception of 27 elected by the provincial councils) and 186 representatives are elected by the people, the former for eight, the latter for four years. Universal male suffrage, with plural voting up to three votes by property and educational qualifications, was introduced by the Electoral Law of 1894, proportional representation being secured by an Act of 1900. In April, 1919, the Belgian Parliament decided as an emergency measure to hold 1919 elections on a "one man one vote" basis for Senate and Chamber. (Unmarried widows of soldiers killed before Jan. 1, 1919, or failing widows, the mothers; widows or mothers of civilians shot by enemy; women imprisoned by enemy for patriotic acts, also voted.)

This Parliament, anomalous, and unconstitutionally elected, was required to make constitutional the machinery by which it was elected; i.e., to revise article 47 of the Constitution. This has not yet been done (Oct. 1920), but it is unlikely that the outworn method of plural voting will ever again be resorted to.

Deputies receive 4,000 francs a year and a free pass over the railways. There are in addition representative Provincial and Communal Councils, elected on a somewhat more liberal franchise.

PRODUCTION.—Agriculture and forestry are important industries, the chief crops being oats, rye, wheat, potatoes, barley and sugar-beet. Under Annex IV. of the *Treaty of Versailles* Germany undertook to deliver to Belgium certain live stock to replace the animals seized or destroyed during the War of 1914-1918. Belgium is essentially a manufacturing country, and it is largely dependent upon foreign supplies for its food. The mineral kingdom yields coal, iron, zinc, lead, and copper. The leading industries are collieries, quarries, and metallurgic (Mons, Charleroi, Liège, Namur, Hainaut, and Brabant), glass, textiles (Verviers), lace (Brussels, Mechlin, Bruges, &c.), flour and starch mills, sugar, distilleries, breweries, &c.

DEFENCE.—In 1914 the Army on a peace footing consisted of about 50,000, all ranks. In the War of 1914-1918 over 500,000 passed into the armies, which were reorganised on French territory during the defensive period of the campaigns. An organised force of 200,000 co-operated with the Allies during the decisive offensive of the autumn of 1918. Those returned as dead or missing, during the War, numbered 102,382. Belgium has no Navy.

EDUCATION.—Schools are maintained by communal taxation, with provincial and State grants, while many are under ecclesiastical control. Roman Catholic largely predominating. There are 134 State high schools, including 44 for girls, and numerous private institutions. Special schools abound. The Universities of Ghent and Liège are maintained by the State; those of

Brussels and Louvain are free institutions. Louvain University is to be rebuilt.

	1922.
Revenue	Francs 2,573,178,913
Expenditure	3,468,143,961
Debt (Dec. 31, 1920)	25,236,941,690
Imports (1921)	402,057,000
Exports (1921)	285,593,000
Imports from U.K. (1921) ...	£19,651,917
Exports to U.K. (1921)	32,957,953

The imports in 1920 were: manufactured articles (2,725,367,000 francs), raw materials (4,003,102,000), foodstuffs and beverages (3,185,293,000), and live animals (137,673,000); the exports were: raw materials (3,153,803,000 francs), manufactured articles (3,002,709,000), and foodstuffs and beverages (932,825,000).

COMMUNICATIONS.—In 1919 there were 4,649 kilometres of railway, almost the whole length destroyed during the War having been repaired or relaid. In 1919 there were 15,160 miles of telegraph wire and 2,295 offices. The navigable rivers and canals have a length of 1,221 miles (1919), and there are 6,177 miles of roads. Most of the maritime trade of Belgium is carried on in foreign bottoms, the mercantile marine only consisting (1920) of 193 vessels (335,201 tons), in addition to which there were 453 fishing boats. In 1920, 7,698 foreign vessels entered at Belgian ports (tonnage 10,852,341). The principal port and commercial entrepôt is Antwerp, on the River Scheldt. Other ports are Ostend, Ghent, Bruges, Nieuport, Blankenburg and Zeebrugge (blocked by the British Fleet April 23, 1918, and since reopened for traffic). The vexed question of the Scheldt, of which the right bank is in Netherlands territory and the left in Belgium, appears likely to be settled by negotiation between the respective Governments. The navigation is to be free to both countries, from the mouth to Antwerp, and the Netherlands war vessels are to be removed from the river.

The Capital, BRUSSELS, had a population in 1920 of 684,870 (with suburbs). Other towns with over 100,000 inhabitants are Antwerp, the chief port (333,882); Ghent (165,910), which has large cotton and flax spinning mills, and is the second port of importance after Antwerp, while its flower shows are famous; and Liège (165,117) the centre of the iron industry. Brussels is 224 miles from London; transit, 8 hrs.

THE BELGIAN CONGO.

Governor-General, His Excellency Maurice Lippens, G.C.V.O.

The Independent State of the Congo became a Belgian Colony by a law of Oct. 18, 1908.

The total area amounts to 909,654 sq. miles, with a native population estimated at 5,000,000 to 7,000,000. The total European population (Jan. 1920) was 6,971, of whom 3,588 were Belgians, 818 were British, 239 Americans, 298 Italians, 657 Portuguese, 87 Swedes, 53 Russians, 153 French, 183 Dutch, 75 Swiss, 308 Greeks, 22 Luxemburgers, 21 Danes, 14 Norwegians, and 11 Spaniards.

The Congo River is navigable for large vessels from its mouth at Banana to Matadi (95 miles), where the European steamers discharge and re-charge their cargo; but between that place and Leopoldville, on Stanley Pool, there occur rapids and falls which have been avoided by a railroad 249 miles in length. A narrow-gauge line runs from Lukula to Boma, the cocoa planting district of Mayumbe. Above Leopoldville the river and its numerous affluents are navigable by steamer for about 5,000 miles, the falls on the Upper River being avoided by a metre-gauge line from Stanleyville to Ponthierville (125 kilometres), and another from Kindu to Kongolo (355 kilometres). Another line from Kahalo to Albertville on Lake Tanganyika (273 kilometres) was completed in 1916, connecting the West Coast of Africa with Belgian East Africa and the East Coast. The Katanga Railway reached Bukama in May, 1918, thus linking up the Rhodesian Railway system with the steamers plying on the Upper Congo River, connecting with both the East and the West Coast. Within eight years, 450 miles of railway have been constructed, 200 of which have been laid during the war. It is now possible to travel by train direct from Cape Town to the river Congo, a distance of 2,650 miles. Work has been started on the Stanleyville-Lake Albert Railway, which will run between the Congo River and the Nile, providing the last link to direct river and rail communication between the Cape and Cairo. Two new lines will run from the copper mining district of Katanga towards the West Coast, one of them reaching Lobito Bay (Portuguese Angola), the other linking the Katanga Railway with the Matadi-Leopoldville Railway. A telegraph line connects Banana to Coquilhatville (895 miles); Boma with Tshela (85 miles); Stanleyville with Ponthierville (79 miles); Kasongo with Uvira (265 miles); Kindu with Kongolo (219 miles); Kaholo with Albertville (160 miles); and Sakania with Bukama (448 miles), a total length of 2,160 miles. There is telegraphic communication with Europe. Fifteen wireless stations connect the West Coast with the principal Government stations throughout the Colony. A great inter-

Continental wireless station is being erected at Kanga to communicate direct with Brussels. The West Coast District has a rather scanty rainfall (40 inches), but on the Maiumbe Hills and in the whole interior the rainfall averages between 60 and 80 inches, and the country is very fertile and productive. Sleeping sickness, once very prevalent and destructive, is now decreasing. Extensive forests cover the central districts; oil palms are plentiful everywhere, and supply an ever-increasing trade in palm-oil and palm-kernels. Wild rubber and wild coffee are common; coffee, cocoa, Pará and Ceara rubber and cotton are successfully planted. Mines are very extensive. The copper district of Katanga has enormous deposits of copper ore, and the melters at the Lubumbashi produced about 23,000 tons of copper in 1919. A rich tin-belt extends from Bukama towards Lake Tanganyika. The gold-bearing districts of North-eastern Congo are being prospected by the Government, and contain both alluvial and reef gold. Diamond-bearing gravels are worked in the south. The total imports during the year 1919 were valued at 85,681,000 francs: the exports (204,146,254 francs in 1919) are mostly palm-kernels and palm-oil, ivory, rubber, gum-copal, cocoa, copper, gold and diamonds. Capital, Leopoldville (Leopoldville-Kinshasa). Principal towns, Boma (pop. 500 whites, 2,000 natives); Elisabethville (Katanga) (pop. 1,000 whites, 6,000 natives); Stanleyville (200 whites, 8,000 natives); Coquilhatville.

Revenue (1921)	£2,700,425
Expenditure (1921)	3,304,422
Debt (1919)	14,000,000
Imports (1920)	9,501,390
Exports (1920)	12,609,820
Imports from U.K. (1920)	1,006,487
Exports to U.K. (1920)	724,155

By the *Anglo-Belgian Agreement* of July, 1919, the districts of Ruanda and Urundi, portions of the former territory of German East Africa (see "Tanganyika Territory"), which adjoin the Belgian Congo on the E., were assigned by Great Britain to Belgium. *Ruanda* and *Urundi* formed the N.W. corner of German East Africa from 5° S. lat. to the S. borders of (British) Uganda and have an area of about 15,000 square miles, with an estimated population of 3,000,000. They lie W. of the Victoria Nyanza and N.E. of Lake Tanganyika, through which are their respective outlets. The soil is poor, and the only exports are live stock and hides. The administrative capitals are Niansa (Ruanda) and Kitega (Urundi), the commercial capitals being Kigali (Ruanda) and Usumbura (Urundi).

Leopoldville (Congo)—Consul, C. K. Ledger.

Kasai District—Vice-Consul,

Elisabethville—V.-Con., M. A. B. Denton Thompson.

BHUTAN.

See "Countries within the Indian Sphere of Influence" (p. 629).

BOKHARA.

President of the Council of the Soviet of Nazars and Nazar for Foreign Trade, Khodjayef Feyzulla.

Bokhara is a Central Asian Republic with an estimated area of 85,000 square miles, and a population of 1,250,000, the majority being Muhammadan Uzbeqs. The capital (Bokhara) is a station on the Russian Trans-Caspian Railway, and has a population of about 75,000.

The principal products are rice, wheat, fruit, hemp, cotton, and silk. Exports (mainly to Russia) are agricultural products and silk and cotton manufactures; imports are principally manufactured goods and sugar. The Emirate was abolished in 1920 and the Emir fled to Afghanistan. A Soviet Republic of Bokhara was established and its complete independence was recognised, by Soviet Russia by Treaty of March 4, 1921.

CAPITAL, Bokhara.

BOLIVIA.

(República Boliviana.)

President (1921-25), Bautista Saavedra.

MINISTRY (June, 1922).

Foreign Affairs, Dr. Severo Fernandez Alonzo.

Interior, Posts and Telegraphs, Dr. David Alvestigui.

Finance and Development, Dr. José Paravicini.

War, Dr. Hernando Siles.

Justice and Industry, Dr. Pedro Gutiérrez.

Education and Agriculture, Dr. Filipe Guzman.

Envoy Extraordinary, Minister Plenipotentiary in London, Señor Don Albert Gutierrez, 54 Holland Park, W. 11.

Secretary of Legation, Señor Don Mamerto Uriolagoitia.

Consul-General, 20 Copthall Avenue, E.C. 2.

The Republic of Bolivia extends between lat. 8° and 23° S. and long. 57° 30' and 73° W., and its area is about 597,460 square miles*, with an estimated population of 2,825,439. The Republic was formerly comprised in the Spanish Vice-Royalty of *Alto-Peru*, and derives its present name from its liberator, Simon Bolivar, (born 1783, died 1830).

The chief topographical feature is the great central plateau (6,500 square miles) over 500 miles in length, at an average altitude of 12,000 feet above sea level, between the two great chains of the Andes, which traverse the country from south to north, and contain, in Illampu, Illimani and Sajama, three of the highest peaks of the western hemisphere. The total length of the navigable streams is about 12,000 miles, the principal rivers being the Itenes, Beni, Mamoré, and Madre de Dios.

Mining and agriculture are the principal industries, the mineral productions being very valuable. The ancient silver mines of Potosi are now worked only for tin, but gold, partly dug and partly washed, is obtained on the Eastern Cordillera of the Andes; the tin output is, after that of the Straits Settlements, the largest in the world, while copper, antimony, wolfram, bismuth, salt, and sulphur are also found. Its agricultural produce consists chiefly of rice, barley, oats, maize, cotton, coca, indigo, india-rubber, cacao, potatoes, cinchona bark, medicinal herbs, &c. Manufactures are in a very undeveloped state. The principal exports are tin and silver ores, crude rubber, copper ores, bismuth, lead ores, wolfram, wool, coca, hides, and antimony; the chief imports are iron and steel products, textiles, machinery, sugar, flour, and coal. There are about 1,116 miles of trunk lines of railways in operation, and 1,300 miles under construction;

and 4,000 miles of telegraph wire. There are wireless services between Riberaita, La Paz, Cobija, Capitandi (Chaco). There is direct railway communication to the sea at Antofagasta (2 days), Arica (1 day), and Mollendo (2½ days), and also (with a gap of 125 miles) to Buenos Aires (5 days); branch lines run from Oruro to Cochabamba, and from Rio Mulato to Potosi. Construction on the railway between La Quiaca (on the Argentine frontier) and Atocha (in Bolivia), which, when completed, will allow through railway communication with Buenos Aires, is, after many delays, now being pushed forward by an American corporation. The gap between Tupaza and La Quiaca is crossed by an automobile service, taking one day. Communication with Peru is effected by rail to Guaqui and thence by steamer across Lake Titicaca to the railroad at Puno. The principal line is the Antofagasta and Bolivia railroad (719 miles), and a line from La Paz to the province of Yungas (the first section of which is open) may eventually connect with the steamers on the rivers Beni, Mamoré, and other tributaries. A line from Potosi to Sucre, the legal capital, is under construction, and trains run to Betanzos.

Bolivia is without a sea-coast, having been deprived of the ports of Tocopilla, Cobija, Mejillones, and Antofagasta by the "Pacific War" of 1879-1882 (see Chile). The Peace Army amounts to about 5,000, all ranks, the War Effective being about 105,000.

The chief cities are La Paz (pop. 109,352), Cochabamba (30,818), Potosi (29,977), Santa Cruz (25,807), Sucre (29,000), Tarija (12,755), and Oruro (32,369).

Spanish is the language of the country.

Actual revenue (1918)	Rs. 29,957,540
Interior debt (Sept. 1921)	33,721,220
Floating debt (Sept. 1921)	25,145,000
External debt (Sept. 1921)	9,750,000
Exports (1920)	156,028,744
Imports (1920)	65,339,505

Archivist, G. R. Moore, B.A.

Consul-General in London, Augusto Sarmento

Pereira Brandão, Coventry House, 20 South

Place, Finsbury, E.C. 2.

Consul-Gen. in Liverpool, Dario Freire.

Brazil, the most extensive State of South America, discovered in 1500 by Pedro Alvares Cabral, Portuguese navigator, is bounded on the north by the Atlantic Ocean, the Guianas, Colombia and Venezuela; on the west by Peru, Bolivia, Paraguay, and Argentina; on the south by Uruguay; and on the east by the Atlantic Ocean; and extends between lat. 5° 10' N. and 33° 45' S. and long. 34° 40' and 73° 15' W., being 2,600 miles from north to south, and 2,500 from west to east; with a coast-line on the Atlantic of 3,700 miles. The Republic comprises an area of 3,298,870 square miles, with a population (Census 1920) of 30,635,605.

The northern States of Amazonas and Pará and the central State of Matto Grosso (which together constitute more than one-half of Brazil) are mainly wide, low-lying, forest-clad plains. The eastern and southern States are traversed by successive mountain ranges interspersed with fertile valleys. In the extreme south, towards the interior, the land rises by gentle gradations to the height of 2,000 to 5,000 feet above sea level. The principal ranges are *Serra do Mar* in São Paulo; the *Serra do Mantiqueira* (Itatiaia, 9,000), and the *Serra do Espinhaço* (Itacolumi, 6,000 feet), in the south-east of Minas Geraes; the *Serra do Paranã*, between Goyaz and Minas Geraes, the *Serra dos Aymores*, which divide Espírito Santo from Minas Geraes; and the *Serra da Gurgueia*, *Branca* and *Araripe*, which envelop Piauí.

Brazil is unequalled for the number and extent of its rivers. The *Amazon*, the largest river in the world, has tributaries which are themselves great rivers, and flows from the Peruvian Andes to the Atlantic, with a total length of some 4,000 miles. Its northern tributaries are the *Rio Branco*, *Rio Negro*, and *Japurá*; its southern tributaries are the *Juruá*, *Purus*, *Madeira* and *Tapajós*, while the *Xingu* meets it within 100 miles of its outflow into the Atlantic. The *Tocantins* and *Araguaya* flow northwards from the Plateau of Matto Grosso and the mountains of Goyaz to the Gulf of Pará. The *Parnahyba* flows from the encircling mountains of Piauí into the Atlantic. The *São Francisco* rises in the South of Minas Geraes and traverses Bahia on its way to the Eastern coast, between Alagoas and Sergipe. The *Paraguay*, rising in the south-west of Matto Grosso, forms a boundary with Bolivia on its way through Paraguay to its confluence with the *Paraná*, which rises in the

mountains of that name and divides Brazil from Paraguay. On the Iguassu, which unites with the Uruguay at the Argentine boundary, are the majestic *Falls of the Iguassu*.

GOVERNMENT.—Brazil was colonised by Portugal in the early part of the sixteenth century, and in 1822 became an independent empire under Dom Pedro, son of the refugee King João VI. of Portugal, the centenary of Brazilian independence being celebrated by an International Exhibition at the capital (Sept. 7 to Dec. 31, 1922.) On Nov. 15, 1889, Dom Pedro II., second of the line, was dethroned and a republic was proclaimed. The constitution rests on the fundamental law of Feb. 24, 1891, which established a federal republic under the name of *Estados Unidos do Brazil*. The President and Vice-President are elected for 4 years by the direct votes of all male Brazilians over 21 years who can read and write; they are ineligible for the succeeding term. They are aided, as an executive, by a Council of Ministers, who are responsible to the President and not to the legislature. Congress consists of a Senate of 63 members and of a Chamber of Deputies of 212 members; members of both houses are paid. The language of the country is Portuguese, foreign languages being read and spoken in the following order:—French, Italian, English, German and Spanish.

PRODUCTION.—The minerals are very considerable and valuable, comprising gold, silver, iron, diamonds, topazes, and other precious stones. The immense iron deposits have been scarcely touched. Manganese is exported, and there are important deposits of monozite sand. Low-grade coal deposits are in the south. Its agricultural produce is abundant and its forests are immense. Cattle-raising is an important industry, the number being 34,270,324 (Census of 1920). The chief products of the country are coffee and rubber: the rubber comes from the more northern provinces, especially the valley of the Amazon, and is shipped from Pará and Maranhão; coffee coming chiefly from São Paulo. Tobacco and cocoa are grown largely, especially in Bahia. Cotton is being largely cultivated. Sugar-cane is grown in large and increasing quantities in the northern provinces, Pernambuco being the centre of the sugar-producing zone. The exports include also meat, hides, maize, beans, and *Herco-maté* (tea). The imports consist principally of every description of manufactured articles, but there were (1915) 1,541 industrial establishments, including 161 cotton-mills, giving employment to 45,942 hands, and representing an invested capital of \$50,000,000. Foreign capital to the amount of £200,000,000 has been invested in Brazilian undertakings in the ten years 1908-1917. The enormous protective duties were again increased in 1887, 1893, 1896, 1906, and 1916. In 1921 the exported merchandise was classified: (1) animals and their products, £6,459,477; (2) minerals and their products, £1,165,507; (3) vegetables and their products, £50,961,914.

In 1921 the foreign trade of Brazil was shared as under:

Exports to:	Exports to:
Europe—	America—
France	U.S.A.
U.K.	Uruguay
Italy	Argentina
Belgium	Asia
Sweden	Africa
Denmark	
Spain	Total....

DEFENCE.—The peace effective of the Army is about 50,000 all ranks. The Navy consists of 2 Dreadnoughts, 2 old battleships, 5 protected cruisers, 2 scouts, torpedo boats, and some small vessels and aircraft.

EDUCATION.—Primary education is carried out by private initiative and at the cost of municipalities and States, in some cases with a Federal subsidy; there were over 1,000,000 pupils in 1920. Secondary and Technical education is carried out by Federal, State and Municipal authorities, with 42,000 pupils in Federal schools and 40,000 in State and Municipal institutions in 1920. Higher education (12,000 students in 1920) is carried out by Federal and State governments at the State University of Rio de Janeiro, and at the University colleges at Manaus (Amazonas) and Curitiba (Paraná) and other private colleges.

COMMUNICATIONS.—In December, 1921, there were 28,828 kilometres of railway open, and 2,273 under construction. Length of telegraph wires, 79,791 kilometres. In 1921 steam and sailing vessels of 23,113,156 tons (of which 5,852,595 were under the British flag) entered Brazilian ports, the principal harbours being Manaus, Pará, Maranhão, Pernambuco, Maceio, Bahia, Victoria, Rio de Janeiro, Santos, and Rio Grande.

BULGARIA.

(Bulgariya.)

Tsar, Boris III., born Jan. 30, 1894, succeeded (on
the abdication of his father) Oct. 4, 1918.

MINISTRY (Aug., 1922)

Prime Minister & Foreign Affairs and War (ad
interim), M. Stamboliski.

Interior, M. Rayko Dascaloff.

Finance, M. Torlakoff.

Education, M. Omartscherski.

Commerce & Labour, M. Alexander Radoloff.

Railways, M. Izanko Bakaloff.

Agriculture, M. Oboff.

Justice, M. Peter Yaneff.

Public Works, M. Christo Nanoloff.

Minister in London, M. D. Stancioff; 51 Queen's
Gate, S.W. 7.

1st Sec. of Legation, M. Petroff-Tchomakoff.

Attaché, B. Athanasoff.

The Kingdom of Bulgaria is bounded on the
north by Rumania, on the west by Yugo-Slavia
and Greece, on the east by the Black Sea, and
on the south by Greece.

A Principality of Bulgaria was created by the
Treaty of Berlin (July 13, 1878), and in 1885
Eastern Roumelia was added to the newly-
created principality. In 1908 the country was
declared to be an independent kingdom, the area
at that date being 37,202 square miles, with a
population of 4,337,500. In 1912-13 a successful
war of the Balkan League against Turkey in-
creased the size of the kingdom, but in August,
1913, a short campaign against the remaining
members of the League reduced the acquired
area, and led to the surrender of about 2,000
square miles to Rumania. On Oct. 12, 1915,
Bulgaria entered the War on the side of the
Central Powers by declaring war on Serbia. She
thus became involved in the defeats of 1918, and
on Sept. 29, 1918, made an unconditional sur-
render to the Allied Powers. On Nov. 29, 1919,
she signed the *Treaty of Neuilly*, which ceded

the S. Dobrud to Rumania and E. and W. Thrace to Greece. The present area of Bulgaria is stated at 115,000 sq. kilometres (= 71,457 sq. miles), with a population (Dec. 31, 1920) of 4,861,439. The prevailing religion of the Bulgarians is the Orthodox Greek Church. In 1916, the Gregorian was substituted for the Greek Calendar.

GOVERNMENT.—The executive power is vested in the Tsar, and is exercised by a Council of Ministers, appointed by him. The legislature is a single chamber National Assembly or *Sobranie* of 213 representatives, elected for a maximum term of four years by adult manhood suffrage. Metropolitan members receive 15 leva, and others 20 leva, a day and travelling expenses.

PRODUCTION.—Agriculture is the principal industry of the people and employs over half the population, the principal crops being wheat, rye, barley, oats, tobacco and fruit. The live stock includes sheep, goats, cattle, pigs, horses, asses and mules. Coal of good quality is mined at Pernik and Trevena, and stone, iron, gold, silver, lead, manganese and copper are worked, but the mineral development is in its infancy. The chief manufactures are woollens, cottons and cigarettes. The exports consist principally of cereals (especially wheat), live stock, essence of roses, woollens, skins, cheese, eggs, timber, cocoons, and tobacco; the principal imports being textiles, metal goods and machinery, colonial wares, leather, building materials, petroleum and other oils, paper, salt fish, rice, and coal.

DEFENCE.—Before the War of 1914-1918 service in the Army was universal and compulsory, and on a peace footing it numbered about 58,000, all ranks. During the War (Oct. 1915-Sept. 1918) about 560,000 passed into the ranks of the Army, and of those over 250,000 became casualties. By the *Treaty of Neuilly* the Bulgarian Army is limited to 20,000 all ranks.

EDUCATION is free and compulsory and the proportion of attendances is good; the number of illiterates in Bulgaria is very small. There are few technical schools. Sofia has a University.

COMMUNICATIONS.—There were 1,845 miles of railway open in 1919 and about 250 miles under construction; 4,000 miles of telegraph line and 1,254 of telephone line. In 1914 there were 2,515 post offices and 438 telegraph offices. The principal Black Sea ports are Varna and Bourgas; and Rustchuk, Sistor and Vidin on the Danube. In 1913, 11,755 vessels (3,132,481 tons) entered and 11,710 vessels (3,108,505 tons) cleared at Bulgarian ports.

CENTRAL AMERICA, Federation of.

In 1921 the Central American Republics of *Honduras, Guatemala, Nicaragua and Costa Rica*, jointly decided to form a new State to be known as the **FEDERATION OF CENTRAL AMERICA**, but the various Republics have not yet decided to give up their separate and independent status.

CHILE.

(República de Chile.)

President (1920-1925), Arturo Alessandri, assumed office Dec. 21, 1920 \$60,000

MINISTRY (October 17, 1922).

Prime Minister, Don Luis Izquierdo.
Foreign Affairs, Don Carlos Aldunate Solar.
Justice and Public Instruction, Don Robinson Paredes.
Finance, Don Guillermo Edwards Matte.
War and Marine, Don Hernán Correa Roberts.
Railways, Industry and Public Works, Don Miguel Letelier Espinola.

Envoy Extraordinary and Minister Plenipotentiary in London, Señor Don Agustín Edwards.
Legation, 22 Grosvenor Square, W. 1.
1st Secretary, Don Manuel Salinas.
Advisers, Don Luis Waddington; Don Alejandro Álvarez; Don Ricardo Schönmeier.
Secretaries, Don Jorge Silva; Don Santiago de Ossa.

Naval Attaché, Capt. Don Carlos Jouanne.
Military Attaché, Major Don Juan Negrete.
Attachés, Don J. Bittencourt; Don S. Monk; Don A. R. Edwards.
Consul, Vicente Echeverría L., 94 Gracechurch Street, E.C. 3.

A State of South America, of Spanish origin, lying between the Andes and the shores of the South Pacific, extending coastwise from the Rio Sama to Cape Horn south, between lat. 17° 15' and 55° 59' S., and long. 66° 30' and 75° 48' W. Extreme length of coast-line about 2,485 miles. Its extreme length is about 2,800 miles, with an average breadth, north of 41°, of 100 miles. The great chain of the Andes runs along its eastern limit, with a general elevation of 5,000 to 15,000 feet above the level of the sea; but numerous summits

* Exclusive of War Indemnity of £100,000,000 under Treaty of Neuilly, Nov., 1919.

attain the height of 18,000 feet—the highest are the Guallatiri, 19,882 feet; the Baya, 19,993 feet; Cocorputi, 22,162 feet; El Muerto, 21,227 feet; and others nearly as lofty. The chain, however, lowers considerably towards its southern extremity. There are no rivers of great size, and none of them are of much service as navigable highways. In the north the country is arid. Chile is divided into 23 provinces and 1 territory, the aggregate area of which is estimated at 289,798 square miles.

The population (on Aug. 1, 1921) was 3,801,936. Included in the population are four distinct racial divisions; (a) the Spanish settlers and their descendants; (b) the indigenous Araucanian Indians, Fuegians, and Changos; (c) mixed Spanish-Indians; and (d) European immigrants, who were represented in 1920 by 20,000 Spaniards, 15,000 Italians, 14,000 British and Irish, 11,000 Germans, and 10,000 French.

In 1921, the births numbered 148,931; marriages, 24,821; and deaths, 127,059. The principal towns, with their estimated populations (1920), are:—Santiago (498,931), Valparaíso (191,000), Concepción (86,144), Talca (30,312), Iquique (44,290), Chillan (39,000), Antofagasta (56,000), and Temuco (25,000).

GOVERNMENT.—Chile was discovered by Spanish adventurers in the 16th century, and remained under Spanish rule until 1810, when a revolutionary war, culminating in the *Battle of Maipú* (April 5, 1818) achieved the independence of the nation. The present constitution bears the date of May 25, 1853. The President is chosen by indirect vote. The National Congress consists of a Senate of 37 members and a Chamber of Deputies of 118 members, elected by direct vote every three years. There is universal adult male suffrage for those who can read and write. From 1879–1882 Chile was at war with Peru and Bolivia, and Peru renewed her application for the return of the provinces of Tacna and Arica which were taken from her by Chile in the "Pacific War." Bolivia also demands an outlet to the Pacific. In 1922 Chile and Peru signed a treaty to submit the Tacna-Arica question to arbitration.

PRODUCTION, &c.—Agriculture and mining are the principal occupations. Wheat, maize, barley, oats, beans, peas, lentils, wines, tobacco, flax, hemp, Chile pepper, and potatoes are grown extensively; the vine and all European fruit-trees flourish; and the exportation of fruit to the United States is (since 1921) a great source of wealth. The live stock includes (1919) 2,163,140 cattle, 4,500,190 sheep, 450,000 horses, 290,000 goats, and 292,431 pigs. The mineral wealth is considerable, the country being extremely rich in copper-ore and iron-ore; the production of copper in 1920 was 88,000 metric tons, and in 1921 59,000 metric tons. The rainless north yields more especially nitrate of soda, iodine, borate of soda, gold and silver, a large number of mines yielding both being in actual work in Tarapacá, Guanaco, and Cachiual in Atacama, and Caracoles in Antofagasta; the centre, copper and silver; and the south, iron and coal (1,007,026 metric tons of coal were mined in 1920). The production of copper in 1920 was 93,226 metric tons, valued at £7,592,000. In 1920 the production of nitrate was 2,523,446 metric tons, valued at £38,400,000; but in 1921 the nitrate industry was practically stagnant, buyers in Europe being unable to pay the

high price of the fertiliser, while the artificial German product also entered into serious competition. There are smelting-works for copper and silver, tanneries, corn and saw mills, starch, soap, biscuit, rope, glassware, paints, mineral waters, boot and shoe, hosiery, hat, cloth, cheese, furniture, candle, match, brush, cordage and paper factories, breweries and distilleries; and the domestic industry furnishes cloth, embroideries, baskets, and pottery. The many ports favour commerce, and 13 lines of steamers connect the country with Panama and the Magellan Strait direct with Europe, a passage to Liverpool occupying from 30 days. The staple articles of export are nitrate of soda, iodine, &c., copper bars and ores, silver ores, corn, flour, hides, wool, barley, honey and beans. The imports include silks, woollens and other textiles, food, and agricultural and mining machinery.

COMMUNICATIONS.—There were (1921) about 5,600 miles of railway, of which 1,383 miles are British controlled. In April, 1922, a convention was signed by Chile and the Argentine for the construction of two more Trans-Andine lines. In 1920 there were 35,810 kilometres of telegraph, 966 post-offices, and 85,843 kilometres of telephone, some worked by English companies, with 4 public wireless stations. The commercial marine numbers (1921) 95 steamers (46,587 tons) and 35 sailing vessels (23,381 tons). In 1921, 2,406 vessels (6,231,544 tons) entered Chilean ports from abroad, and 11,890 coasting vessels (7,595,270 tons); legislation is being introduced to make the coasting traffic exclusively Chilean.

DEFENCE.—All able-bodied male citizens from 20th to 45th year must serve in the militia. The peace effective of the active army is 21,440. The Air Force has a peace strength of 2 squadrons, with 60 pilots and 200 mechanics. The navy consists of 1 battleship, 1 ironclad, 6 cruisers, 12 destroyers, 5 torpedo-boats, and 6 submarines, with a complement of 6,000, all ranks.

EDUCATION is free, and in July, 1920, elementary education was made compulsory, and 73 per cent. of the children attend. There is a State University at Santiago. The National Library contains 293,085 volumes. The language of the country is Spanish and the State religion is Roman Catholic.

AREA AND POPULATION.

Territory.	Square miles.	Population.
China Proper	1,501,000	402,000,000
Manchuria	360,000	11,000,000
Mongolia	1,076,000	3,000,000
Tibet	750,000	3,000,000
Eastern Turkestan ...	600,000	2,000,000
Total	4,287,000	421,000,000

China proper (or the Eighteen Provinces) contains an area of over 1,500,000 square miles. Its length from north to south is 1,860 miles, and its breadth 1,520 miles, and its population, according to the latest Chinese estimates, exceeds 400,000,000.

China became a Republic on Feb. 12, 1912, with a President and Vice-President and an Executive Ministry, and a Legislature of a Senate (*Tsan Yi Yuan*) of 264 members and a House of Representatives (*Chung Yi Yuan*) of 596 members. The government of the 18 provinces is entrusted to civil and military governors, the latter (*Tuchun*) ranking first and holding practically all the powers of government; under them each province is subdivided into circuits superintended by *Taoyins* or intendants, and again into districts. All the territorial officials are appointed by the central Government, and the provincial governors, though free to act independently in many matters of local detail and finance, are responsible to the central Government at Peking in all important questions, and especially so in foreign affairs. The *Treaty of Kiakhta*, 1915, between China, Russia, and Outer Mongolia recognises the Hutukhta Khan as Ruler of Outer Mongolia, while China, as the Suzerain Power, appoints Residents at Urga and three other towns. Mongolia has since developed into an independent self-governing republic, and is in alliance with the Soviet Government at Moscow. The civil government of the three Manchurian provinces and of Turkestan is now similar to that of the province of China proper. The exact status of Tibet is still unsettled.

FOREIGN RELATIONS with the Chinese Empire have existed for many centuries. In the 13th century the Venetian merchant-adventurer Marco Polo resided in Cambaluc (the present Peking), and was employed by the Mongol Emperor Kublai Khan as adviser. In the 17th century Jesuit missionaries had attained considerable influence, but their power aroused jealousy, and they were expelled. The Dutch and Portuguese traders had for centuries maintained commercial dealings with the port of Canton, but towards the end of the 18th century they were largely displaced by the British East India Company, and when the Company's monopoly was withdrawn, in 1833, the position of British merchants in Canton became a national question, and contributed towards the first Chinese War of 1840. A treaty was signed at Nanjing, as the result of these operations, ceding Hong Kong to Great Britain and opening five ports to foreign trade and residence; but the principle of extra-territoriality was maintained, and foreigners remained amenable only

to the laws of their own countries. The continued exclusiveness of the Chinese Government led by a long chain of events to the war of 1860, when British and French troops captured Peking and burnt the Summer Palace. From this date the development of foreign trade began to be most important. In 1894 China fought a disastrous war with Japan, resulting in the loss of Formosa and the establishment of Corea as an independent state. An abortive attempt was made, in 1898, by the Emperor to introduce administrative reforms, but his reactionary ministers persuaded the Dowager Empress (his aunt) to reassume the reins of government. Under her rule a plot was hatched to rid the country of foreigners; and in the summer of 1900 the Legations in Peking and the foreign settlements in Tientsin were fiercely attacked and bombarded for many weeks. The situation was relieved at its most critical moment by the arrival of an allied army despatched by nearly all the Treaty Powers, and Tientsin and Peking were captured. The Imperial Court fled, and remained in voluntary exile until early in 1902. Meanwhile, a Peace Protocol was signed between the Envoys of the Treaty Powers and the Chinese Plenipotentiaries, Prince Ch'ing and the late Li Hung Chang. This provides for an indemnity of \$325,000,000, to be paid within the next 39 years. Subsequent negotiations resulted in 3 new commercial treaties—(1) between the U.K. and China (5 Sept., 1902); (2) U.S. and China (8 Oct., 1903); and (3) Japan and China (9 Oct., 1903). Under the two last Mukden, Tatungkow, Chang-sha, and Antung in Manchuria, were made Treaty ports.

On the conclusion of the war between Russia and Japan in 1905, a Treaty and Additional Agreement relating to Manchuria were entered into between Japan and China. By the former the Chinese Government consented to all the transfers and assignments made by Russia to Japan in Manchuria; and by the latter the following cities and towns in Manchuria were opened as places of international residence and trade:—Feng-huang-ch'eng, Liao-yang, Hsin-mintun, Tung-chiang-tzu (on the Liao River), and Fa-ku-men in Fengtien Province; Ch'ang-ch'un, Kirin, Harbin, Ninguta, Hunch'un, and Sansing in the Kirin Province; and Tsitsihar, Hailar, Aihun and Manchuli in the Heilungchiang Province.

In October, 1911, a revolution broke out in Hankow, which resulted finally in February, 1912, in the abdication of the Manchu Dynasty in favour of a Republican form of Government. In 1913, a second revolution, engineered by the Southern Party, was successfully put down by President Yuan Shih-kai. Since that date the Central Government has been gradually consolidating its position, and bringing about a centralisation of power in Peking. In May, 1915, a new treaty with Japan was concluded by which additional privileges are granted to Japanese in Manchuria and Mongolia. Towards the end of 1915 President Yuan Shih-kai engineered a campaign to revert to a Monarchical form of government, and, as the result of elections held all over the country, was invited to ascend the throne as Emperor. The Southern Provinces, however, immediately rose in revolt, and the attempt failed and finally ended with the death of Yuan Shih-kai in May, 1916. The Vice-President, Li Yuan-hung, succeeded to the Presidency, and all traces of the Yuan Shih-kai

régime were rapidly abolished. The first Republican Parliament reassembled, and the government reverted to the Republican form adopted after the overthrow of the Manchu Dynasty in 1912. Both Houses of Parliament are elected by a system of limited franchise, and the government of the country is vested in them. The President, who is elected by Parliament, is assisted by a Premier and a Cabinet of Ministers, whose appointments have to be approved by Parliament, and to whom they are responsible for their actions. An abortive attempt to restore the Monarchy was suppressed in June, 1917, after which Parliament was again dissolved, and government carried on by the Cabinet and President Feng Kuo-Chang, Li Yuan-hung having resigned. The Anfu party was crushed by the Chihli party and Chang Tso-lin combined in the war of 1920, and in that year a revolt in South China culminated in the declaration of an independent Republic of South China (with its capital at Chung King) including the former provinces of Yunnan, Kwei Chow, Sze Chuen and Honan, but this Republic has not yet been recognised, and internal and external discussions appear to threaten its existence. This has since (1921) dissolved into a sort of loose federation, Tsuehuan, Yunnan, Kwangsi, Kwangtung, Kweichow, and Hunan all not owning allegiance to the central Government. The old M.P.'s, after the second dissolution of Parliament in 1917, to the number of about 150, met at Canton and elected Sun Yat Sen as President of China. The election of Hsu Shih Ch'ang in 1918 by the "Tuchün's" Parliament was held by them to be illegal. There were thus two "Presidents" in a divided China, one in Canton and one in Peking. The recent war of May, 1922, has helped to make prospects of reunification brighter by the defeat of Chang Tso-lin by Wu Pei-fu on the one hand, and the expulsion of Sun Yat-sen by the latter's ally, Chen Chuang-ming, on the other. Li Yuan-hung has resumed the Presidency, and summoned the members of the old Parliament to meet in Peking to discuss and settle the long-deferred question of the Constitution.

The estimated foreign population of China was as follows in 1920: British, 11,028; Japanese, 153,918; Russian, 144,413; American, 7,269; Portuguese, 2,282; German, 1,013; French, 2,753; the total being 326,069. Out of a total of 3,421 foreign firms in China, 534 were British, 1,237 Russian, 955 Japanese, 273 German, 136 American and 113 French.

DEFENCE.—The army is undergoing reorganisation. The total strength of all forces in August 1913, just after the Rebellion of that year, was estimated at 500,000, but no authenticated statistics are obtainable. An Air Force is being organised, the assistance of a British officer (Group-Capt. F. V. Holt, C.M.G., D.S.O.) having been obtained until June 1922. The Navy consists of 2 protected cruisers built in 1911 (2,750 tons), 4 older protected cruisers (4,300–3,000 tons), 3 torpedo gunboats (850 tons), 11 gunboats (750–550 tons), 4 destroyers (400 tons), and 8 small torpedo boats (120 tons).

EDUCATION.—Many changes in administration and development are under discussion, including a proposal to establish universal compulsory primary education. In 1918–19 there were 134,000 schools in operation, with 4,500,000 pupils. There is a University in Peking. In 1922 there were upwards of 1,250 Chinese

newspapers and magazines, published at regular periods, in Peking, Shanghai, Tientsin, and the other large centres, in addition to English and other Foreign daily newspapers.

COMMERCE.—The net trade of the open ports is stated as follows, in *Haikwan taels* (in 1921 the *Haikwan tael*=3s. 11½d.)

Year.	Imports.	Exports.	Total.
1914	569,241,382	356,226,629	925,468,011
1918	554,893,082	485,883,031	1,040,776,113
1919	614,647,365	599,268,939	1,213,916,304
1920	762,250,230	541,631,300	1,303,881,530
1921	906,122,439	641,255,537	1,507,377,976

The import of Indian opium is now prohibited.

External Trade, 1920.
Haikwan Taels.

Country.	Imports from.	Exports to.
Japan	129,135,866	141,927,902
Hong Kong	159,131,335	136,462,043
U.S.A.	143,198,962	67,111,451
Great Britain (1920)	131,719,952	45,804,536
(1921)	150,000,000	31,000,000
France	4,878,519	21,016,444
Straits Settlements	7,803,083	16,538,995

COMMUNICATIONS. — *Railways.* — About 7,000 miles were open in Jan. 1922, inclusive of the Manchurian lines, while 2,500 miles more are projected or under construction.

Shipping. — The China Merchants Steam Navigation Co. have a fleet of 31 ships of an aggregate tonnage of 60,000. Besides this, there are a large number of small vessels engaged in the coasting trade and on the Yangtse. In 1920 the total tonnage of the 210,609 vessels entered and cleared at Chinese ports was 104,266,695. Of these ships 39,543 (40,315,707 tons) were British, 135,377 (27,653,309 tons) Chinese, and 25,152 (18,191,592 tons) Japanese. In June, 1918, a vessel of 14,750 tons, constructed at the Kiangnan Dock and Engineering Works at Shanghai, was launched and supplied to the order of the United States Shipping Board.

Telegraphs are being rapidly constructed by the Central Government, and Peking is in communication overland with Europe and Tibet, the line being extended to Lhasa. In 1922 there were about 50,000 miles of land lines and several high-power wireless installations.

CUSTOMS AND POSTS. — The Chinese Maritime Customs is the controlling service; this body consists of nearly 1,000 Europeans, a large proportion of them British subjects, all under the control of the *Inspector-General*. By an Imperial Decree of May, 1906, the Maritime Customs Dept. was transferred from the Foreign Board to the Board of Revenue, and two Chinese Administrators-General were appointed. But the change has not materially affected the powers hitherto exercised by the *Inspector-General*. In addition to the collection of dues at the Treaty Ports, this service manages the lighting and navigation thereof, and keeps a small fleet of cruisers to enforce its regulations. The Chinese Post Office, formerly a branch of the Customs, was transferred in 1911 to the Ministry of Communications, and a Foreign Co-Director General, with a considerable foreign staff, was appointed; letters can be sent all over the 18 provinces at a uniform rate of 3

cents for 20 grammes. The number of Chinese post offices is 10,470 (1920), 401,000,000 postal packets and 4,200,000 parcels were handled in 1920.

BUDGET (July 1919-June 1920).

Ordinary Revenue	Taels 400,838,001
Extraordinary Revenue	80,581,785

Total	490,419,786
Ordinary Expenditure	Taels 271,289,205
Extraordinary Expenditure	224,475,681

Total	495,762,888
-------	-------------

Chinese Debt (Jan., 1920).

War Loans outstanding	£30,000,000
Boxer Indemnity do.	48,000,000
Railway Loans do.	40,000,000
General Loans do.	50,000,000
Japanese Loans do.	37,000,000
Short term Loans do.	13,000,000

£215,000,000

About 10s. 2d. per head of the population.

Included in the expenditure is the sum of 214,000,000 taels towards repayment of debt.

MANCHURIA lies to the north of China Proper, and has a total area of about 360,000 square miles, with a population estimated at 11,000,000. The capital is Mukden (pop. 250,000), a station on the Manchurian railroad and connected with the Russian system. Indigo, opium, cotton, tobacco, and various cereals are grown, and there is great mineral wealth.

MONGOLIA has a total area of 1,076,000 square miles and a population estimated at about 3,000,000, the desert of Gobi being within its borders. Outer Mongolia, by the Treaty of Kiakhta of 1915, is an autonomous state under Chinese suzerainty, with seat of government at Urga. Its ruler (Khan) has lost practically all political power and Mongolia has become a self-governing Republic, in alliance with the Soviet government at Moscow. A Bolshevik garrison is now maintained at Urga. The principal industry is cattle and sheep raising and the provision of transport animals.

TIBET (area, 750,000 square miles; pop. 3,000,000) borders on British India, see p. 633.

CHINESE TURKESTAN (or *Sinkiang*) has a total area of 600,000 square miles and a population estimated at 2,000,000. It includes Zungaria and Chinese Tartary, and provides sheep, cattle, and transport animals for the caravan routes. The chief centres are Kashgar and Urumchi.

CAPITAL OF THE CHINESE REPUBLIC, Peking. Population (1921), 1,300,000. The population of the principal ports in 1919 is estimated as follows:—Amoy, 400,000; Canton, 1,370,000; Changsha, 1,272,000; Chingkiang, 500,000; Chungking, 1,011,600; Foochow, 1,500,000; Hangchow, 729,950; Hankow, 290,000; Harbin, 365,000; Ichang, 450,000; Kiukiang, 380,000; Kiungchow, 590,000; Nanking, 900,000; Ningpo, 2,200,000; Shanghai, 1,600,000; Soochow, 1,100,000; Tientsin, 838,000; Tsingtau, 310,000; Wanhsien, 752,000; Wenchow, 1,750,000; Wuchow, 350,000.

FLAG: Five horizontal bands, red, yellow, blue, white, black.

COLOMBIA

(Républica de Colombia.)

President (1922-1926), General Pedro Nel Ospina,
 assumed office Aug. 7, 1922.
 Foreign Affairs, Dr. Jorge Velez.
 Finance, Dr. Felix Salazar.
 Treasury, Dr. Gabriel Posada Villa.
 War, Dr. José U. Osorio.
 Instruction, Dr. Alberto Portocarrero.
 Agriculture and Commerce, Dr. Antonio Paredes.
 Interior, Dr. Jimenez Lopez.

Envoy Extraordinary and Minister Plenipo-
 tentiary in England, Señor Dr. Don Ignacio
 Gutierrez Ponce, 42 Holland Road, Kensington,
 W. 14.

Secretary, Señor Don Alfonso Delgado.

Consul-General, Señor Don Joaquín Orrantía, 7
 Sicilian Avenue, Southampton Row, W.C. 1.
 Consul in Liverpool, Señor Don Genaro Payan.

The Republic of Colombia lies in the extreme
 north-west of South America, having a coast-
 line on both the Atlantic and Pacific Oceans.
 It is situated between 2° 40' S. to 12° 25' N. lat.
 and 68° to 79° W. long., with an estimated area
 of 461,606 square miles, and a population esti-
 mated at 5,475,000, of whom more than one-half
 are whites and half-castes. The country is
 intersected by three great ranges of the Andes,
 known as the Western, Central, and Eastern
 Cordilleras; the second contains the highest
 peaks, but the latter is the more important, as
 it consists of a series of vast table-lands, cool
 and healthy. This temperate region is the most
 densely-peopled portion of the Republic.

The principal rivers are the Patía, Cauca,
 Magdalena, Caquetá and Putumayo. The Patía
 flows through the famous *Minima Gorge* of the
 Western Cordilleras, and one of its tributaries
 (the Carchi, or Upper Guaitara) is spanned by the
 Rumichaca Arch, or *Inca's Bridge*, of natural
 stone. On the Funza is the Great *Fall of*
Teguendama, 480 feet in height.

The Colombian coast was visited in 1502 by
 Christopher Columbus, and in 1536 a Spanish
 expedition under Quesada established a govern-
 ment of certain coastal communities under the
 name of New Granada, which continued under
 Spanish rule until the revolt of the Spanish-
 American colonies of 1811-1824. In 1819 *Simon*
Bolívar (born 1783, died 1830), established the
 Republic of Colombia, consisting of the terri-
 tories now known as Colombia, Panama, Vene-
 zuela and Ecuador. In 1829-1830 Venezuela and
 Ecuador withdrew from the association of pro-
 vinces, and in 1831 the remaining territories
 were formed into the Republic of New Granada.
 In 1858 the name was changed to the *Granadine*
Confederation and in 1861 to the United States
 of Colombia. In 1886 the present title was
 adopted. In 1903 Panama seceded from Colombia,
 and is now a separate Republic.

The Colombian forests are extensive; among
 the trees are mahogany, cedar, fustic, and other
 dye-woods and medicinal plants. The mineral
 productions are emeralds, gold, silver, platinum,
 copper, iron, lead, and coal; petroleum is avail-
 able in large quantities but is unworked. The
 principal agricultural products are coffee, cotton,
 plantains, and bananas, and in some parts to-
 bacco, wheat and other cereals. Manufactures,
 for home consumption, consist of woollen and
 cotton stuffs. The chief exports are coffee, pre-
 cious metals, hides, india-rubber, and bananas.
 All religions are tolerated.

The standing army consists of about 6,000 men; the navy has been nearly abolished. Railroads are in their infancy, about 750 miles being open in 1920, with 8,680 (1907) miles of telegraph. The rate of exchange is about \$5 gold = £1 (approximately).

Spanish is the language of the country.

	1920-21.	1923.
Revenue (estimate) gold	\$27,058,530	\$21,900,800
Expenditure (est.)	34,792,525	21,500,000
Foreign debt (June 1, 1922).....		3,783,530

COSTA RICA.

(República de Costa Rica.)

President, Julio Acosta, assumed office May 8, 1920.
Minister of Foreign Affairs, J. A. Coronada.
Treasury, Rafael Huete.
Interior (ad interim), Aquiles Acosta.
Education, Miguel Obregon.
Works, Narciso Blanco.
War & Marine, Aquiles Acosta.
Minister in London (vacant).
Consul-General, W. J. Le Lacheur, 58 Lombard Street, E.C.

The Republic of Costa Rica, the most southern State of Central America, extending across the isthmus, between 8° 17' and 11° 10' N. lat. and from 82° 30' to 85° 45' W. long., contains an area of about 23,000 English square miles, and a population (1921) of 477,892.

For nearly three centuries (1530-1821) Costa Rica formed part of the Spanish-American dominions, the seat of government being at Cartago. In 1821 the country joined in the War of Independence, and from 1824-1839 it was one of the United States of Central America.

The principal agricultural products are coffee, bananas, rice, maize, sugar-cane, potatoes, cocoa and beans, the soil being extremely fertile. The chief exports (1921) are coffee (£896,696), bananas (£289,688), sugar, gold and silver bullion, cacao, hardwoods, vegetables, skins, and hides. The imports are dry goods, hardware, provisions, railway materials, machinery, paints,

and general merchandise (in 1921, 56 per cent. from United States, 17 from United Kingdom, 2 per cent. from Germany, and 6 from Central America).

The chief ports are Limon, on the Atlantic coast, through which passes the whole of the important banana trade with the U.S. and U.K., as well as by far the larger part of the other exports and imports; and Puntarenas on the Pacific coast. In 1921, 622 foreign vessels (849,524 tons) entered at Costa Rican ports. About 405 miles of railroad were open in 1921. In 1921 there were 301 post offices, dealing with 4,581,555 packets, and 152 telegraph offices (one wireless), with 1,460 miles of telegraph and telephone line. A considerable amount of English capital is embarked in the Republic. Spanish is the language of the country.

	1920.	1921.
Public income.....	£1,707,577	£1,051,792

1st Secretary, Dr. R. Rodriguez Altunaga.

2nd Secretary, Dr. P. Rodriguez Capote.

Chancellor, José A. Losa.

Consul, Dr. Rafael Cervino, 46 Kingsway, W.C. 2.

The island of Cuba (the largest of the "West India" Islands) lies between 74° and 58° W. long., and 10° and 23° N. lat., with a total area of 44,178 sq. miles and a population of 2,150,112 (1910).

The island of Cuba was visited by Christopher Columbus, during his first voyage, on October 27, 1492, and was then believed to be part of the Western mainland of India. Early in the 16th century the island was conquered by the Spaniards, to be used later as a base of operations for the conquest of Mexico and Central America, and for almost four centuries Cuba remained under a Spanish Captain-General. The slave trade was abolished early in the 19th century, and the slaves were emancipated from 1880-1886. The government of Spain was marked by a generally corrupt administration, complicated by internal unrest fomented by external influences, and the various attempts at independence met with severe military repression. The separatist and autonomous agitation culminated in the closing years of the 19th century in a fierce and bloodthirsty war, and although a conciliatory movement was evinced by the Madrid authorities in 1897, the struggle was continued by the party of separation in the island. In 1898 the government of the United States put into execution a threat of interference by the despatch of the battleship *Maine* to Havana harbour, and in February of that year the vessel was sunk by an explosion, the cause of which appears likely to remain an unsolved mystery. On April 20, 1898, the U.S. Government demanded the evacuation of Cuba by the Spanish forces, and a short Spanish-American war led to the abandonment of the island, which was occupied by U.S. troops. From Jan. 1, 1899, to May 20, 1902, Cuba was under U.S. military rule, and reforms of the widest and most far-reaching character were instituted. On May 20, 1902, an autonomous government was inaugurated with an elected President, and a legislature of two houses. The island was, however, again the prey of revolution from July to Sept., 1906, when the U.S. Government resumed control. On Jan. 28, 1909, a republican government was again inaugurated.

Of the total area of 28,000,000 acres, only about 1,000,000 acres are cultivated, 50 per cent. of these being under sugar cane and 30 per cent. under tobacco, sweet potatoes and bananas. Rice, coffee, cocon and maize are also grown and tropical fruits (oranges, coco-nuts, pine apples, &c.) flourish. The chief agricultural products of the island are tobacco and sugar (estimated crop in 1920, 3,650,000 tons; actual crop, 1918-19, 3,971,594 tons); the chief product of the forests is mahogany, while cedar is also used for boxing the tobacco crop. The live stock includes about 3,000,000 cattle and 600,000 horses, the vast savannahs of Central Cuba being particularly suitable for cattle ranges.

2,516 miles of railroad are open and about 6,000 miles of telegraph line.

Spanish is the language of the island.

Estimated.

	1917-18.	1922-23.
Revenue	\$64,460,000	\$55,638,800
Expenditure	62,730,774	54,852,102
External Debt (June 1922)		\$46,793,500
Internal Debt (do.)		40,786,900
	1919-20.	
Imports	£434,188,630	
Exports	855,138,341	
Imports from U.K. (1921)	1,890,708	
Exports to U.K. (1921)	6,425,427	

Note.—Both U.S. and Cuban currency are legal tender, Cuban currency being of the same fineness and value as that of the U.S. There is no Cuban paper currency.

CAPITAL, Havana (pop. estimated 1914, 635,000); other towns are Santiago (45,000), Matanzas (36,000), Cienfuegos (30,000), Cardenas (24,000), and Camaguey (29,000). In 1915 there were 32,795 immigrants.

FLAG: Five horizontal bands, blue and white (blue at top and bottom) with red triangle, close to staff, charged with silver star.

Secretaries, F. Borek Dohalsky; Jaroslav Cisar; Dr. Max Lobkovic.

Consul, Dr. František Pavlasek.

Commercial Attaché, M. L. K. Neumann.

Attaché, Ivan Laichter.

Secretary on Special Mission, Rev. T. B. Kaspar.

Part of the Austro-Hungarian Monarchy declared its independence on Oct. 18, 1918, as the Czecho-Slovak Republic, and ten days later the *Národní Výbor* (National Council) of Czecho-Slovakia took over the administration of the independent territories. The political neighbours of the Republic are the Austrian and Hungarian Republics on the S., the German and Polish Republics on the N., the German Republic on the W., and the Ukraine Republic on the E. Within these limits are the former Austrian Provinces of Bohemia and Moravia and part of the Province of Silesia; and Northern Hungary from the Danube (at Pressburg, on the Austrian frontier) to the Carpathians (at the headwaters of the Ung River in the eastern slope of Mt. Vereezka)—a total area of about 54,041 sq. miles, with a population estimated at 10,250,000 for the Czech Provinces of Bohemia,

Moravia and Silesia, and at 3,250,000 for Slovakia—a total of 13,500,000, of whom 6,000,000 are Czechs, 3,700,000 Germans, 1,700,000 Slovaks, 1,200,000 Magyars, 300,000 Ruthenians and 250,000 Poles. The new State was recognised by Austria in 1918 and by Hungary on March 10, 1919. The National Assembly, consisting of a Senate and a Chamber of Deputies, is elected by universal adult suffrage of both sexes. The executive power is exercised by a Council of Ministers, appointed by the President. In 1919 the Democrats, Agrarians and Slovaks were in the ascendancy, Socialists 28, Clericals 28 and Progressives 6 being in the minority of the 260 members. The Constitution guarantees religious and political freedom, and the Church will be separated from the State. About 75 per cent. of the people are Roman Catholics.

As regards both natural resources and industrial development, Czecho-Slovakia is one of the richest territories in Europe. By the Peace Treaty it has acquired about 80 per cent. of the whole industry of the former Austrian Empire. It has several rich coalfields, and possesses valuable mineral resources which, notably in Slovakia, have not yet been fully developed. Radium, gold, silver, iron, graphite and lead, are all mined successfully, while the whole country is abnormally rich in mineral and thermal springs. Oil is found in Slovakia, and Bohemia has rich deposits of clay, kaolin and sand. The whole country is well farmed, and agricultural production is on a very high level of excellence. In foodstuffs, however, the country is not self-supporting. Thirty-three per cent. of the total area of the country is forest land, and both in the productiveness of the forests and the quality of the timber the forest wealth of the Republic is enormous. In its industrial development Bohemia may be compared to Belgium. In Bohemia, Moravia and Silesia, which have a total population of ten millions, more than four million people are engaged in industry. The various industries are well organised, and as regards both machinery and modern improvements the factories are as well equipped as any in Europe. Outside of Slovakia illiteracy is almost unknown, and both the German and Czech elements which compose the working-class population are hard-working and in many cases highly skilled. The new Republic possesses, therefore, many valuable economic advantages, and after the first two and a half years of its existence it is no exaggeration to state that Czecho-Slovakia is in a far more flourishing state than most of its neighbours.

Czecho-Slovakia has no direct access to the sea, but has a right of access over the Elbe and Oder to Hamburg and Stettin, for which purpose the Government proposes to canalise the Upper Elbe in order to connect it with the Oder and the Danube. If this proposal is carried out, the country will be traversed by a waterway affording a communication from the North Sea and Baltic, *via* the Danube, to the Black Sea.

The capital is Prague on the Moldau (Vltava), the former capital of Bohemia, with a population estimated in 1921 at 676,500; other large towns are Brünn (Brno) in Moravia (pop. 221,422); Pilsen (Plzen), the brewing centre in Bohemia (pop. 88,447); Pressburg (Bratislava), where the Danube forms the S. boundary of the Republic (pop. 93,229); and Kaschan (Kosice) in Eastern Slovakia (pop. 52,699).

DANZIG.

(Freistaat Danzig.)

Under Article 102 of the *Treaty of Versailles*, the City of Danzig with the surrounding territory (constituting a total area of about 580 sq. miles, with a population estimated at 356,700) was declared to be a Free City, under the protection of the League of Nations. There is an elected legislature of 120 members. The city and port of Danzig, at the mouth of the Vistula, has a considerable trade, and if the grain industry of Russia and Poland should revive, a large quantity of wheat and rye would be exported. The tonnage of ships entered in 1921 exceeded 1,397,000 tons, and of those cleared 1,048,000 tons. *Danzig—High Commissioner of League of Nations*, Lt.-Gen. Sir Richard Haking, G.B.E., K.C.B., K.C.M.G. (1921).

Vice-Consul, Poul Scheel.

Consul-General—Leith, G. Davidsen.

Consulates at Hull, Liverpool, Manchester, Belfast, Falmouth, Guernsey, and Newcastle-on-Tyne.

A Kingdom of Northern Europe, and the smallest of the Northern States, consisting of the islands of Zealand, Fünen, Lolland, &c., the peninsula of Jutland, and the outlying island of Bornholm in the Baltic. Denmark is situated between 54° 34'—57° 44' N. lat. and 8° 5'—12° 40' E. long., with an area of 15,042 square miles, and a population (July 1, 1921) of 3,283,000, an increase of 210,000 since 1920 (1924,500 being due to the inclusion of Slesvig). Nearly one-half of the population live exclusively by agriculture, and one-fourth by manufactures and trade.

In 1864 Denmark was attacked by Prussia and Austria and deprived of Schleswig-Holstein (Prussia taking the whole territory after a further war with Austria in 1866). At the conclusion of peace between the Central Powers and the Allies in 1919, the question of Schleswig-Holstein was subjected to a plebiscite of the inhabitants, and North Schleswig is now part of Denmark.

The common products are wheat, rye, oats, barley, potatoes, cattle, horses, pigs, sheep, and butter. Its manufactures are, for the most part, for home consumption. Its principal imports are coals, manufactured goods (woollens, silks, cottons), iron, hardware, wine, fruit, tea, maize, and colonial produce. In 1918, 1,070,000 hectares were under corn crops, 387,600 ha. sugar and other beets, and 787,200 ha. hay crop. In July, 1918, the live stock numbered 544,900 horses, 2,123,400 cattle, 470,000 sheep, and 620,800 swine. The crops in 1918 included 4,120,400 qrs. of oats, 2,364,400 of barley, 1,507,500 rye, 2,003,900 mixed corn and 766,000 qrs. of wheat. Its chief exports are agricultural produce, including wheat and barley, bacon, hams, flour, butter, eggs, hides, skins, corn-meal and oil-cake, horses, and cattle. There is a sea-going mercantile marine of 399 steamers, with a tonnage of 341,835. There are (1917) 2,645 miles of railway and 8,437 miles of telegraph line.

DEFENCE.—The Army consists of about 14,000 trained men, the vote for 1918-19 amounting to Kr. 85,000,000 (including supplementary estimates of Kr. 69,000,000). The Navy consists of 4 coast-defence ironclads and 1 launched, 2 small cruisers, 27 torpedo-boats (built and building), 10 submarines (built or building). Vote, 1918-19, Kr. 33,000,000.

EDUCATION is free and compulsory, the schools being maintained by local taxation. Special schools are numerous, horticulture and agriculture predominating. The University is at Copenhagen.

Consul, Octavio Ventura.

Vice-Consul, A. M. Ventura.

The Republic of Santo Domingo, formerly the Spanish portion of the island of that name, is the oldest settlement of European origin in America,

having been founded in 1496 by Bartolomeo Columbus, who named it Hispaniola. The island was peopled by the Spaniards with imported African slaves, who soon exterminated the "Indian" tribes. In 1821 an independent republic was proclaimed and the Spaniards abandoned the country. The present republic of San Domingo broke away from Haiti in 1844 and its independence is secured under a law of Nov. 6, 1844. The Dominican Republic comprises an area of 19,322 square miles, with a population of 897,405. Sugar and cocoa are the most important crops, and coffee and tobacco are grown in fair quantities, the other products being mahogany, furniture woods, cotton, wax, honey, logwood, turtle-shell, hides, and divi-divi. There are about 150 miles of public railroad, and telegraphic (3 wireless stations) and telephonic communication has been established throughout the Republic, which is connected by cable with North and South America, New York, Curaçao, and Porto Rico. The Customs are administered temporarily by officials appointed by the United States Government, under a Treaty by which the U.S. collects the Customs, assists the Government to maintain peace, and acts as intermediary between the Republic and its foreign creditors. Since 1907 not less than 55 per cent. of the Customs Collections has been deposited in a New York Bank to pay the interest and sinking fund charges of the Foreign Loan.

On 29 Nov., 1916, a military Government by U.S. officers was proclaimed. As the result of continued representations, an agreement has now been arrived at between the Dominican people's representatives and the U.S. military Government, by which a provisional Dominican Government is to be established for a period to be determined, prior to the setting up of a permanent Government. Subject to the satisfactory fulfilment of certain conditions on behalf of the Dominican people, the U.S. military forces of occupation will shortly evacuate the island. (Oct. 1922.)

Of the import trade in 1920, 77 per cent. came from U.S. and 3.3 per cent. from Great Britain. British trade is hampered by the insufficiency of direct maritime communication and by the absence of direct service with the largest ports, which are on the south coast, the ships of the R.M.S.P.Co. calling at the northern ports only.

ECUADOR.

(República del Ecuador.)

President (1920-1924), José Luis Tamayo, assumed office Sept. 1, 1920.

Foreign Affairs, Señor Dr. N. Clemente Ponce.

Interior, General Delfín B. Trevino.

Finance, Señor Emilio Cuañón Pareja.

Public Instruction, Señor Dr. Pablo A. Vasconez.

War and Marine, Señor Octavio G. Icaza.

Minister in London, Señor Don Enrique Dorn y de Alzúa.

Consul-General in London, Señor Don Enrique L. Andrade (acting), 23 College Hill, Cannon St., E.C. 4.

Consuls at Liverpool, Birmingham, Southampton, Glasgow, and Cardiff.

An equatorial State of South America, extending from lat. 1° 38' N. to 6° 5' S., and between 60° 20' and 81° W. long. (according to the Ecuadorian geography, but there are boundary disputes with Peru), comprising an area of 276,000 English sq. miles.

The former Kingdom of Quito was conquered by the Incas of Peru in the latter part of the 15th century. Early in the 16th century Pizarro's conquests led to the inclusion of the present territory of Ecuador in the Spanish Vice-Royalty of Peru. The independence of the country was achieved in a revolutionary war which culminated in the battle of Mount Pichincha (May 24, 1822).

The Republic of Ecuador is divided into 17 provinces and one territory. It has a population of about 2,000,000, mostly descendants of the Spaniards, aboriginal Indians, and Mestizoes. The territory of the Republic extends across the Western Andes, the highest peaks of which are Chimborazo (20,702 ft.), Ilinza (17,405 ft.), Carihuairazo (16,515 ft.), Cotacachi (16,301 ft.), and Pichincha (16,000 ft.) in the Western Cordillera; and Cotopaxi (19,498 ft.), Antisana (18,864 ft.), Cayambe (19,160 ft.), Altar (17,730 ft.), Sangay (17,464 ft.), Tungurahua (16,690 ft.), and Sincholagua (16,365 ft.) in the Eastern Cordillera. Ecuador is watered by the Upper Amazon, and by the rivers Guayaquil, Mira, Santiago, Chones, and Esmeraldas on the Pacific coast. There are extensive forests, and the cinchona bark tree is common.

Its chief products are cocoa, vegetable ivory, cotton, coffee, india-rubber, sugar, orchella weed, straw hats and hammocks, bark, yams, tobacco, fruits, sarsaparilla, wheat, &c. Its minerals consist of gold, quicksilver, lead, iron, and copper; emeralds and rubies are occasionally met with, and sulphur is found in many parts. The chief exports are cocoa, caoutchouc, vegetable ivory and gold, cinchona bark, Panama hats, coffee, and cattle; the chief imports are textiles and other manufactured goods. A railroad connecting Guayaquil and Quito was opened in 1908. Guayaquil is the chief port (population, 1920, about 100,000); other chief towns being Quito, the capital, 84,000; Cuenca, 30,000; and Riobamba, 12,000. The Galapagos (Tortoise) Islands (2,870 square miles) belong to Ecuador.

The language of the country is Spanish.

	1920.

Legation,
Sec. of Legation.

Egypt lies between 22° and 32° N. lat. and 24°–37° E. long. The northern boundary is the Mediterranean, and in the south Egypt is continuous with the Sudan. The western boundary runs from a point on the east, N. of Sollum (long. 25° E.), inland in a south-westerly direction for some distance and then turns S. along a meridian line approximately in long. 24° E. until it meets the parallel of 22° N. lat., which forms the N. boundary of the Sudan. The

E. boundary follows a line drawn from Rafa on the Mediterranean (34° 15' E. long.) to the head of the Gulf of Aquaba, from which point the remainder of the E. boundary is washed by the waters of the Gulf of Aquaba and the Red Sea. Within these boundaries is enclosed an area of about 363,181 sq. miles, with a population (1917) of 12,718,555.

The Nile Valley.—The river Nile runs through cliffs, which, with the exception of a stretch of granite in the neighbourhood of Aswan, are chiefly of sandstone from Wadi Halfa to near Esna, while further north from Luxor to Cairo limestone predominates. The valley varies in width from less than half a mile in the southern granitic region to over 20 miles in the northern limestone region, and the cliffs in some places rise to heights of over a thousand feet above the river. The fertile lands, on which the prosperity of the country depends, occupy the floor of the valley between the river and the bounding cliffs, while to the north of Cairo they spread out into the irregular fan-shaped formation of the Delta which comprises the six provinces of Lower Egypt, with the richest soil in the country. The Nile has a total length of 3,470 miles from the Victoria Nyanza to its mouths. In the 960 miles of its course through Egypt it receives not a single tributary stream. The river has a regular yearly rise and fall, attaining its maximum level about the middle of September and its minimum about the end of May. At Cairo the average rise and fall is about 13 feet.

The Libyan Desert.—Westward from the Nile Valley into Tripoli stretches the vast limestone plateau of the Libyan Desert. Though as a whole it constitutes one of the most arid and inhospitable regions of the world, the Libyan Desert contains a number of depressions wherein wells and springs furnish water in sufficient quantity to irrigate small areas and to support populations of several thousands. These depressions are the Oases, of which the principal from S.E. to N.W. are known as Kharga, Dakhla, Farafra, Baharia, and Siwa. On the eastern edge of the Libyan Desert, a few miles south-west of Cairo, stand the Pyramids of Giza, of which the highest, the Great Pyramid, is 451 feet high. Close to the pyramids is the Great Sphinx, 189 feet long.

The Eastern Desert of Egypt.—In the Eastern Desert a great back-bone of high and rugged mountains, mostly of the igneous and metamorphic rocks, extends north-westward from Abyssinia to near Suez, and reappears as a detached mass in the Peninsula of Sinai. The principal peaks of the Egyptian portion of this mountain chain are (from N. to S.) Gebels (Mounts) Gharib 5,760 feet, Abu Dokhan 5,450 feet, Sheyib 7,150 feet, Hamata 6,490 feet, Faraid 4,480 feet, Gerf 4,650 feet, Shendib 6,271 feet, and Elba 4,680 feet. Flanking this mountain chain on the west, between the axis of the range and the Nile are plateaux of sandstones and limestones, dissected by wadis (dry water-courses), often of great length and depth, with some wild vegetation and occasional wells and springs. The roads follow the course of the main wadis from well to well, and here and there are to be found small encampments of wandering Arabs.

The Sinai Peninsula.—The north (Mediterranean) coast of Sinai is flat and sandy like that of Egypt. Inland, the ground gradually rises

into a highly dissected limestone plateau, which extends southward for about 150 miles and terminates in the great scarp of El Tih; in some parts this scarp rises to over 5,000 feet above the sea-level. South of El Tih the character of the country abruptly changes, the southern third of the peninsula being formed of rugged granitic mountains intersected by deep ravines. The highest peaks of these mountains, such as *Gebels* (Mounts) Katherina, 8,680 feet, Um Shomer, 8,530 feet, Eth Thebt, 8,030 feet, are higher than any of those in Egypt proper. Springs and wells occur in fair abundance, mostly in the *wadis*, and running water (mostly brackish) is found at a few points.

Native Population.—There are three distinct elements in the native population of Egypt. The largest, or "Egyptian" element, is a Hamito-Semitic race, known in the rural districts as *Fellahtn* (*fellāh*=ploughman, or tiller of the soil). The *fellahtn* have been mainly Muhammadans since the conquest of the country in the 7th century, but 824,474 Coptic Christians are enumerated in the towns and villages. These Egyptian townsmen and peasantry numbered 12,404,897 in the total of the Census of 1917. A second element is the *Bedouin*, or nomadic Arabs of the Libyan and Arabian deserts (32,663 Bedouins and 107,360 Sudanese and Berberin), of whom about one-seventh are real nomads, and the remainder semi-sedentary tent-dwellers on the outskirts of the cultivated land of the Nile Valley and the Fayūm. The third element is the *Nubian* of the Nile Valley between Aswān and Wadi-Halfa, of mixed Arab and negro blood. The Bedouins and Nubians are Muhammadans.

Foreign Population.—At the Census of 1917 the foreign residents were 205,998, of whom 30,796 were Turks, 56,735 Greeks, 40,198 Italians, 24,325 British, 21,270 French and Tunisians, 2,789 Austro-Hungarians, 4,225 Russians, 157 Germans, 23,975 other Europeans, and 1,496 Persians.

Religions.—At the Census of 1917 there were 11,623,745 Muhammadans, 1,026,115 Christians, 59,581 Jews and 8,814 other religions.

Government.—From B.C. 30 to A.D. 639 Egypt was a province of the Roman Empire, but in A.D. 640 the Christian inhabitants were subjugated by Moslem invaders, and Egypt became a province of the Eastern Caliphate. In 1517 the country was incorporated in the Ottoman Empire, and was governed by pashas sent from Constantinople until the beginning of the 18th century, when for about 100 years the ruler was chosen from among the Mamelukes, or bodyguard. From 1798-1801 French troops occupied the country, with the ostensible object of suppressing the Mamelukes and restoring the authority of the Sultan, and after their forced evacuation of the country Mohammed Ali, who was proclaimed Pasha in 1805, exterminated the Mamelukes in 1811, and was eventually made hereditary governor of Egypt and the Sudan by a *firman* from the Sultan of June 1, 1841. Mohammed Ali was succeeded before his death by his son Ibrahim (1848), whose nephew Abbas I ruled from 1848-1854. During the reign of Said (1854-1863), a son of Mohammed Ali, the concession for the Suez Canal was obtained, and his successor, Ismail (1863-1879), a son of Ibrahim, was granted (by *firman* of May 14, 1867) the title of KEDIVE, the previous rulers

1,500,000 sq. miles, with 16,000,000. The wild drove him to raise enorm which plunged the cour embarrassment that the and Great Britain interv to abdicate, appointing to succeed him. By November 10, 1879, tw were appointed for the administration and re-e special equilibrium, Major the British and M. de representatives. The Egypt for two years, and initiated, but further p by a military revolt, hea Egyptian Army (Alme revolt assumed alarmin French Government dec a British expedition was lish the authority of the trol was abolished by a (January 13, 1883), and a was appointed in plac General. In January, 188 had previously served as appointed Consul-Genera dom, and the British ex to quell the rebellion o country as an army of a revolt had broken ov vices, headed by Sheil of Dongola, who proclam Islam. Defence.—Service in nominally compulsory between the ages of 19 quired each year being certain classes (professor employees, &c.) are exer also be purchased for a ballot. Natives of the S tarily for service in the consisted of 1,022 officers

different Government Departments possess steamers on the Nile for inspection purposes.

The *Egyptian Police* (under the Ministry of the Interior) consists of City and Provincial Police, the former comprising 262 officers, 376 constables, and 5,103 men (443 Europeans), the latter 342 officers and 5,261 men. There are also 54,422 *ghafirs*, or native night-watchmen.

Education on native lines has long been given in elementary vernacular schools. The native system of education is completed by the more promising pupils at the Azhar University in Cairo, the principal University of the Moslem world. In 1920 there were 134 *Elementary Schools* (*Maktabs*) under Government supervision, with about 18,300 pupils, and about 3,270 *Maktabs* under inspection for grants-in-aid with 201,386 pupils; there were also 42,864 pupils in other elementary schools. The government primary schools give a 4-years' course and prepare for admission to secondary, agricultural and other special schools. There were also 7 government *Secondary Schools* with 2,525 pupils and 34 *Secondary Schools* under inspection for grants-in-aid with 4,588 pupils; other *Secondary Schools* (about 30) had 1,645 pupils in 1920. There are *Colleges of Medicine, Law, Education, Engineering, Commerce, Veterinary Science and Agriculture* at Cairo. Much assistance is given to education by private enterprise and benevolence and foreign schools abound. A National University was founded in 1908 at Cairo.

Agriculture.—The total area of Egypt is estimated at approximately 222,400,000 English acres, of which about 8,450,000 acres are formed of the alluvium brought down by the Nile from the Abyssinian hills, the remainder being chiefly limestone desert. Only the former are cultivable, and only that portion of them which can be irrigated from the waters of the Nile—this portion amounts at present to 5,400,000 acres (1919), and is capable of extension (to 7,600,000 acres) by the improvement of water storage facilities and means of distribution. By these works, and by the construction of a vast network of canals with controlling masonry works, a small part of the excess waters of the river have been stored and distributed at all seasons of the year, and perennial irrigation has been extended throughout Middle and Lower Egypt. The increase in the value of the land has been enormous, and some 2 million acres have been added to the cultivable land of Egypt. Although nearly the whole population is directly or indirectly connected with agriculture, the total given in the census return of 1917, under the headings of proprietors, tenants and labourers, &c., amounts to 4,012,000 persons employed, representing only 30·5 per cent. of the population. The land is held as to 4,773,050 *feddâns* by 1,662,803 native owners, and as to 5,486,155 *feddâns* by 8,222 Europeans. Of the native landlords 1,044,371 owned up to 1 *feddân*, 476,920 up to 5 *feddâns*, and 141,522 from 5 to 50 *feddâns* (1 *feddân* = 1·038 acres). In 1920 there were 1,146,715 *feddâns* under wheat (producing 5,753,483 ardebs) and in 1921, 1,404,798 *feddâns*; 327,776 *feddâns* under barley, 1920, and 359,844 in 1921 (producing 1,895,738 ardebs in 1920); and 418,244 *feddâns* under beans in 1920 and 493,564 in 1921 (producing 1,867,707 ardebs in 1920). The agricultural land is of two kinds. The first is that which is under the basin irrigation system, by which the land receives one watering only. This watering consists of a flooding at high Nile:

as the flood decreases, the seeds of the various crops are sown, and the basin fields are left without further watering. Harvests of wheat, barley, beans, clover, vetches and lentils are gathered in due course. The second kind of land is that which is perennially irrigated by means of canals, and receives waterings according to rotations laid down by the Irrigation Department. In these lands, which are for the most part in Lower Egypt, cotton, maize, wheat, rice, beans, barley, sugar cane, clover, vegetables and fruit are the chief crops.

Cotton.—In 1921 there were 1,291,878 *feddâns* under cotton, the crop being estimated at 3,450,000 kantars, against 1,827,868 *feddâns* and 6,035,500 kantars in 1920. In 1920 the cotton exports were 4,401,457 kantars, valued at £E75,096,026, of which Great Britain took 1,744,420 kantars (£E31,064,882) and U.S.A. 1,268,689 kantars (£E26,222,272).

Live Stock.—In 1918 the cattle numbered 516,760, buffaloes 571,106, horses 30,390, mules 14,929, and donkeys 583,304.

Minerals.—The riparian districts of the lower Valley of the Nile are ill-provided with workable mineral deposits, with the exception of abundant building materials. The mineral resources of Egypt, therefore, are situated in its otherwise barren deserts. Known deposits are chiefly situated at great distances from one another and from the Nile. This fact has retarded exploration and development, but of late years considerable progress has been made. Owing to lack of knowledge of mining, consequent upon their pursuit being entirely agricultural, the local industrial classes have had very little hand in the existing enterprises, whose capital and organisation is chiefly foreign. In 1919 the value of the principal minerals produced was phosphates, £E56,730; salt, £E56,023; metallic ores, £E76,052; gold ingots, £E30,651; and kerosine, £E17,921.

Manufactures and Industries.—The principal articles of Egyptian manufactures are cotton and woollen fabrics, silks, embroideries, brass, silver and copper ware, leather goods, rugs, pottery, alcoholic beverages, sugar, perfumery, and cigarettes. The principal Egyptian Industries are dyeing and tanning.

Railways.—The principal lines radiate from Cairo to Alexandria (and on to Rosetta), Damietta, and Ismailia (continuing northwards to Port Said and southward to Suez). From Cairo the line runs southwards for a distance of 554 miles to Shellal, the First Cataract. At this point a steamer connexion runs to Wadi Halfa, connecting the Egyptian State system with the Sudan Government Railways. Westwards from Alexandria (and close to the coast) runs a line, which it is hoped to extend eventually to the frontier at Sollum, thus joining Tripoli to Egypt. The total length of the Egyptian State Railways (excluding the Auxiliary Railways of Upper Egypt and the Western Oases Railway) on March 31, 1920, was 1,590 miles. 26,212,988 passengers and 4,820,702 tons of merchandise were carried during 1917-8, the net receipts being £E1,920,874. The gauge is standard (4 ft. 8½ in.), with the exception of 138 miles between Luxor and Shellal, which are 3 ft. 6 in. gauge. There are two other State-owned lines in Egypt, namely, the Auxiliary Railways of Upper Egypt, consisting of 282 miles of standard gauge, and the Western Oases Railways, a length of 141

miles (75 centimetre gauge) connecting the oases of Kharga with the Nile Valley. In addition to the Government lines, there are 818 miles of light railways exploited by public companies.

Caravan Routes.—The principal caravan routes lead to the Oases of the Libyan Desert (though Kharga can now be reached by train), whence there is a route, known as the Darb el 'Arhain, leading to Dar Fûr and the south of the Sudan. There are many well-known routes across the Arabian Desert to the Red Sea, that from Qena to Qoseir being probably the most frequently used.

Shipping.—Apart from the three great seaports of Alexandria, Port Said, and Suez, Egypt has but few harbours and anchorages adapted for large craft; the principal are those of Sollûm and Matruh on the Mediterranean, Tor, Abu Zenima, Zeitia, Jemsa and Hurghada in the Gulf of Suez, and Safaga, Qoseir and Halaib on the Red Sea. The Khedivial Mail Steamship Line (which is under British management) has its headquarters at Alexandria and a depot at Suez; the majority of the Egyptian pilgrims to Mecca now travel by it. The principal port is Alexandria, where 1,242 vessels (2,527,436 tons) entered and 1,216 vessels (2,499,557 tons) cleared in 1920. The traffic through Port Said amounted in 1919 to 316 vessels entered and 316 cleared, the remainder being dealt with *via* Suez.

Posts and Telegraphs.—There were in 1920 2,846 post offices and stations, dealing with a total inland correspondence of 69,593,000 (including letters, post-cards, newspapers, &c.), and a total foreign correspondence of 35,225,000. There were on March 31, 1920, 8,558 miles of telegraph and telephone lines, with 21,506 miles of wire. A system of savings banks has been introduced, under the control of the Post Office, the actual deposits being collected in rural districts by the *sarrâf* (village tax-collector).

	1920-21	1921-22
Revenue	£E35,675,000	£E33,630,000
Expenditure	34,616,020	31,440,000
	1920	1921
*Total Imports...	£E101,810,963	£E55,507,984
*Total Exports...	85,467,061	36,356,062
Imports from U.K.	37,894,760	16,937,839
Exports to U.K.	36,343,284	17,045,830

Debt.—The *Caisse de la Dette*, a body representing the creditors of the Egyptian Treasury, has considerable powers and special privileges. The *Caisse*, appointed during an era of bankruptcy, succeeded in protecting the interests of the bondholders, but as Egypt became solvent and prosperous, its stringent regulations prevented the development of the country out of surplus revenue, a large part of which was held in suspense as contingent security for the service of the debt. Though the *Caisse* still exists, its duties are now limited to receiving the revenues necessary for the interest and for the payment of the coupons as they become due, while it also holds a considerable reserve fund, the interest on which reduces the amount of the Treasury contribution. The Egyptian debt was stated as follows (in £ sterling) on April 1, 1920 and 1921:—

* The foreign trade of Egypt for the first seven months of 1922 shows Imports £E24,000,000 and Exports £E16,000,000, the principal increase in Exports being due to £E9,000,000 increase in raw cotton.

Debt.	1920.	1921.
Guaranteed Debt, 3 per cent.	£ 6,098,400	£ 5,872,000
Privileged Debt, 3½ per cent.	31,127,780	31,127,780
Unified Debt, 4 per cent.	55,971,960	55,971,740
Total	93,198,140	92,971,740

The annual Cost of the Debt (in the Budget for 1921-22) is £E3,946,652 including £E664,826 Tribute).

CAIRO, the capital (population about 800,000), stands on the E. bank of the Nile, about 14 miles from the head of the Delta. Its oldest part is the fortress of Babylon in old Cairo, with its Roman bastions and Coptic churches. The earliest Arab building is the Mosque of 'Amr, dating from A.D. 643, and the most conspicuous is the Citadel, built by Saladin towards the end of the 12th century. The bazaars are always interesting, especially the Khân-el-Khalili, the Hamzâwi, and the Brass Bazaar, though the Muski, which leads to them, is fast losing its oriental character.

ALEXANDRIA (population about 450,000), founded B.C. 332 by Alexander the Great, was for over 1,000 years the capital of Egypt. Its great Pharos, or lighthouse, was one of the "Seven Wonders of the World" (see p. 114). It now contains two royal palaces, Ras-el-Tin and Montaza, while almost the entire cotton trade of the country is here controlled by the big dealers and brokers. At the census of 1917 the towns of Tanta (74,195), Port Said (91,000) and Assiut (51,431) also exceeded 50,000 inhabitants.

The most northerly of the Baltic provinces,
is bounded on the N. by the Gulf of Finland,
on the S. by Latvia, on the W. by the Baltic
Sea and on the E. by Lake Peipus and Soviet
Russia (along a line roughly parallel with
the eastern shore of the lake). The islands of
Dago, Osel and other smaller islands in the
Baltic form part of the Republic. It has an
area of about 17,953 sq. miles (within the
boundary settled by agreement with Soviet
Russia), with a population (1920) of about
1,250,000. A large portion of the surface
consists of forests, moors, and small lakes.
Agriculture is the chief industry, rye, oats,
barley, and flax being the chief crops, and
dairy farming is carried on. There are impor-
tant manufactures, including distilling, sugar
refining, oil pressing, woollen, cotton, tobacco,
cork, soap, and petroleum. There were (1922)
406 miles of broad gauge and 493 miles of narrow
gauge railway in operation. The capital is
Reval (pop. 1922, 125,000), an important Baltic
port, connected by railway with Petrograd;
other towns are Narva, Hapsa, Pernau, Valk
and Dorpat.

Legislature consists of a single-chamber As-
sembly (Riigikogu) of 100 members elected for
3 years by universal adult suffrage. The
executive is entrusted to a council of Ministers,
the Prime Minister being Regent of the Re-
public.

FAR EASTERN REPUBLIC,

President of the Council of Ministers, M.
Matveyef.

The Far Eastern Republic, in South Eastern
Siberia, extends from Lake Baikal to the Sea of
Japan, and includes the northern portion of the
island of Saghalien, in the Sea of Okhotsk. Its
western neighbour is the Buryat Mongol Pro-
vince, and it is bounded on the south by China,
with the Yakut Province in the north. The
Republic thus includes the former Russian
provinces of Transbaikalia, Amur and Primor-
skaya, and has a total area of about 675,000
square miles, with a population of about
2,000,000.

Unlike all other Russian Governments the Far
Eastern Republic was established on a Democratic
basis. It is not a Socialist or Soviet institution.
The people enjoy freedom of the press and of pub-
lic discussion, and the equivalent of a *habeas cor-
pus* Act. The National Assembly is elected for two
years on a proportional representation basis, all
inhabitants over the age of 18 having the vote,
while all males between 18 and 45 are liable to
military service.

The capital is Chita (pop. 80,000) on the Trans-
Siberian Railway, other towns being Verkhne-
Udinsk (pop. 60,000), Khabarovsk (pop. 55,000),
and Vladivostok (pop. 95,000) on the railway.
The chief ports are Vladivostok, on the Sea of
Japan, and Nikolayevsk (pop. 70,000), on the Sea
of Okhotsk.

CAPITAL, Chita.

FINLAND.

(Suomen Tasavalta.)

President, Kaarlo Juho Ståhlberg, born 1865,

Minister in London, Monsieur Ossian Donner,
2 Moreton Gardens, S.W. 5.
1st Sec., M. Hugo Valvanne.
Attaché, M. Harald Lehman.

Consul-General, Capt. L. Norrgren, 21, Great
St. Andrew Street, Shaftesbury Avenue, W.C. 2.

A country situated on the gulfs of Finland and
Bothnia which was conquered by Russia from
Sweden, and annexed in 1808. Resulting from
the revolution in Russia, Finland proclaimed its
independence in 1918, and is now an independent
Republic. The area is 145,588 square miles,
with a population (1921) of 3,367,101 of whom
about 3,000,000 are Finns, 300,000 Swedes, and
2,000 Laps, leading a nomadic life in the north.
Nearly all the inhabitants are Lutherans. There
is a university at Helsingfors, with 2,770 students,
of whom 737 are women, in addition to the
Polytechnic and the (reopened) Swedish Uni-
versity at Åbo. The leading crops are rye, barley,
oats, potatoes. Saw mills, wood pulp, cellulose
and paper manufacture provide the chief in-
dustry, and the forests are a great source of
wealth, immense quantities of timber being
prepared for export; dairy produce is also
exported. There are 2,736 miles of railroad;

and a merchant fleet of 4,677 vessels (mostly small), of which 771 are steamers. Railway connexion with Sweden was completed in 1919.

The country was formerly governed by the Finnish Senate, of 22 members, with a Diet of 4 estates elected by the people, but under the Constitution of Jan. 1, 1907, there is a single Chamber elected by universal suffrage of both sexes, women being likewise eligible for election to the Chamber. Finland was thus the first country to concede woman suffrage and representation, and it is noteworthy that it was gained without agitation.

The *Aland Archipelago*, a group of some 300 small islands at the entrance to the Gulf of Bothnia was wrested from Sweden by Russia in 1809, and was incorporated in the government district of Finland. The total area of the archipelago is about 210 square miles, with a population of about 17,000, of whom about two-thirds inhabit Åland (the largest island).

FIUME.

(Free City of Fiume.)

President, Richard Zanella.

By the *Treaty of Rapollo*, the Free City of Fiume was recognized by Italy and by Yugoslavia. The area is about 8 square miles with a population of 65,000, of whom about 15,000 inhabit the surrounding country, and 50,000 the city itself.

FRANCE.

(République Française.)

President of the Republic (1920-1927), Alexandre Millerand, born 1859, assumed office Sept. 23, 1920..... (£1=50 francs) £40,000

§ *Finnish Mark*.—The mark is the same nominal value as the franc; the average exchange Jan.-Sept. 1922 was 213.38=£1 sterling.

MINISTRY.

Premier and Minister for Foreign Affairs, M. Raymond Poincaré.

Minister of Justice, M. Maurice Colrat.

Minister of War and Pensions, M. André Maginot.

Minister of the Interior, M. Maurice Maunoury.

Minister of Finance, M. Ch. de Lasteyrie.

Minister of Marine, M. Raiberti.

Minister of Commerce and Industry, M. Dior.

Minister of Public Works, and Posts and Telegraphs, M. Le Trocquer.

Minister of Public Instruction and Fine Arts, M. Bérard.

Minister of the Colonies, M. Albert Sarraut.

Minister of Labour, M. Albert Peyronnet.

Minister of Liberated Regions, M. Charles Reibel.

Minister of Agriculture, M. Henry Chéron.

Minister of Hygiene, M. Paul Strauss.

Ambassador in London, Monsieur le Comte de Saint Aulaire, Albert Gate House, Hyde Park, Counsellor, M. de Montille. [S.W. 1.

1st Secretaries, M. Roger Cambon; M. Adrien Thierry.

2nd Secretary, M. G. Japy.

3rd Secretaries, Comte Jean de Bourignon de Saint-Martin; M. Jean Vergé.

Attaché, M. F. Knobel.

Military Attaché, Gen. Vicomte de la Panouse, K.C.M.G., C.B., C.V.O.

Asst. do., Lt.-Col. Fagalde, C.M.G., D.S.O.; Capt. Coulon.

Naval Attaché, Capt. de Frégate, Comte de Ruffi de Pontavè-Gevaudan, D.S.O.

Air Attaché, Capt. Sablé.

Commercial Attaché, M. Jean Périer, C.B.

Financial Attaché, M. Avenol.

Consul-General (attached to the Embassy), M. J. Knecht.

Secretary Archivist, Comte La Combe.

Consulate General, 51, Bedford Square, W.C. 1.

Consul-General, M. Lucien Louis Bonzon.

Consul at Liverpool, M. Goiran.

There are also Consuls at Southampton, Newcastle-upon-Tyne, Cardiff, Glasgow, Dublin, and in Jersey.

The most westerly State of Central Europe, extending from 42° 20' to 51° 5' N. lat., and from 7° 45' E. to 4° 45' W. long., bounded on the north by the English Channel and Straits of Dover (Pas de Calais), which separate it from England. Its circumference is estimated at about 3,000 miles, and its area (in 1914) at 207,076 square miles, divided into 87 departments, including the island of Corsica, in the Mediterranean, off the west coast of Italy. The territory ceded by the *Treaty of Frankfurt* (May 10, 1871) amounted to 5,602 square miles; that regained by the *Treaty of Versailles* (June 28, 1919) to 5,819 square miles, making the present area of France (exclusive of Algeria) 212,895 square miles, with a population (census of March 6, 1921) of 39,209,666 (inclusive of Alsace and Lorraine). The population at the census of 1911 was 39,601,509. In 1921 there were 813,356 births, 456,221 marriages, and 696,373 deaths. From 1914-1920 there were 2,779,543 births, and 4,232,705 deaths, exclusive of war losses, which exceeded 1,000,000; in 1920 the excess of women over men was 2,500,000.

France has always been attractive to foreigners, of whom (1921) 1,550,449 were resident there, including 470,873 Italians, 415,546 Belgians, 303,141 Spanish, 55,456 British, and 30,948 Americans.

GOVERNMENT.—The monarchical system of government was overthrown by the *French Revolution* (1789-1793), and the First Republic endured until the Great Napoleon (born Aug. 15, 1769, died May 21, 1821) founded the First Empire in 1804. The monarchy was restored in 1814, and also after the "Hundred Days" of Napoleon (March 20-June 29, 1815), until the Second Republic of 1848, which became the Second Empire on Nov. 23, 1852. On Sept. 4, 1870, the Emperor Napoleon III. (nephew of the Great Napoleon) was deposed, and the Third Republic was set up. The head of the Republic is the President, elected for 7 years by the National Assembly of the two houses of the Legislature, the *Senate* of 300 members (elected by indirect vote for 9 years, one-third being renewable every 3 years) and the *Chamber of Deputies* of 597 members (elected by direct vote for 4 years). Members of the legislature receive 15,000 francs a year and travelling facilities over the railways.

PRODUCTION.—The chief agricultural products are wheat, barley, rye, maize, oats, potatoes, beetroot (for the manufacture of sugar), hops, &c. Fruit trees abound, and are very productive, the principal being the olive, chestnut, walnut, almond, apple pear, citron, fig, plum, &c. The agricultural production in 1913 and 1921 is shown in the following table:—

Crop.	Production.	
	1913. Quintals.	1921. Quintals.
Wheat	86,919,050	88,034,290
Rye	12,714,750	11,276,110
Barley	10,437,600	8,342,850
Oats	51,626,010	35,484,950
Potatoes	125,859,652	83,096,550
Beet	252,201,090	143,061,560

Forestry is an important industry, the principal forests being those of the Ardennes, Compiègne, Fontainebleau, and Orléans, consisting chiefly of oak, birch, pine, beech, elm, chestnut, and the cork-tree in the south. The vine is cultivated to a very great extent (59,280,569 hectolitres of wine were produced in 1921, and 56,034,124 hectolitres in 1920), as the names Bordeaux, Burgundy, Champagne, &c., universally testify; cider-making is also an important industry, and the production in 1921 amounted to 482,986,573 gallons. The live stock (1921) included 23,343,440 cattle, 9,599,560 sheep, and 5,166,080 pigs. Some reparation of the destruction of the War is to be made under Annex IV. of the *Treaty of Versailles*, whereby Germany undertakes to deliver to the French Government specified numbers of bulls and milch cows, stallions, fillies and mares, rams and sheep, and goats. The mineral resources include, coal (1921, 28,240,887 metric tons), pig iron (3,416,953 metric tons), copper, lead, silver, antimony, and salt. Under Article 50 of the *Treaty of Versailles*, the coalfields of the *Saar Basin* are ceded to France for 15 years, at the end of which time the inhabitants are to decide by a *plebiscite* whether they will remain French, return to Germany, or become a self-governing community. The coalfields abut on Lorraine, and have an area of 217 square miles, with a population of 640,000, and they include the towns of Saarbrück (60,000), Saarlouis (16,000), and Merzig (10,000), on the River Saar. It is estimated that the coalfields will yield 20,000,000 tons of high-grade coal, and in 1913 the various establishments in the ceded area produced 1,375,000 tons of cast iron and

1,600,000 tons of steel. Under Annex V. of the Treaty, Germany also undertakes to deliver to France 7,000,000 metric tons of coal annually for 10 years, and to make good any deficiency due to War causes in the production of coal in the departments of Nord and Pas de Calais. The most important manufactures are of metals, watches, jewellery, cabinet-work, carving, pottery, glass, chemicals, dyeing, paper-making, woollens, carpets, linen, silk, and lace. Glass manufacture and pottery are also important, and the sardine fisheries and the culture of oysters are a source of wealth.

DEFENCE.—The *National Army* of France consists of the Metropolitan Army, the Colonial Army, the Gendarmerie, and Republican Guard, and of the partly native armies of Algeria, Morocco, and Tunis. These forces had a total strength on a peace footing (in 1914) of 633,733 all ranks. In the War of 1914-1918 over 20 per cent. of the French people were mobilised, and 9,717,000 all ranks passed into the Armies of France (exclusive of troops from Algeria, Tunisia, and Morocco). Of this total over 1,500,000 were returned as killed or missing. By law of 1919, the French Army will consist in future of 350,000 all ranks on a peace footing, and of 1,300,000 on a war footing, with a reserve (including Territorials) of 2,000,000 all ranks. The *French Navy* was manned in 1920 by 56,000 officers and other ranks, and consisted in 1921 of 7 Dreadnought and 3 Pre-Dreadnought battleships, 9 armoured cruisers, 5 light and 2 protected cruisers, 26 destroyers, 21 torpedo boats (above 450 tons) and 49 submarines.

ARMISTICE MONUMENT.—In the Forest of Compiègne is a *Carrefour de l'Armistice*, leading (through the *Clairière de la Victoire*) to the Armistice Monument, unveiled Nov. 11, 1922. The monument marks the spot where the Germans signed the armistice terms presented by *Maréchal Foch*, and bears the inscription *Ici le 11 Novembre 1918 succomba le criminel orgueil de l'Empire Allemand vaincu par les peuples libris qu'il prétendait asservir*.

EDUCATION.—The educational system is highly developed. *Central Administration* comprises (a) Ministry of Public Instruction; (b) Superior Educational Council, charged with the actual administration; (c) Consultative Committee (advisory); (d) Educational Bureaux and Inspecting Staffs, whose heads report direct to the Minister. *Local Administration* comprises (a) Territorial Academies, with inspecting staffs for all grades, and (b) Departmental Councils, presided over by the *préfet*, charged especially with primary education. By the Law of July, 1904, all congregationist institutions are to be suppressed within 10 years, and many were at once closed, some re-opening under lay management. (i.) *Primary: Secular, comp. and free.* Age 6-13. Schools include (a) infants; (b) lower primary; (c) higher do. Supplementary courses, and courses for adults. Lower and higher primary certificates granted. Numerous private courses are aided from local funds. Schools are for boys, for girls, or mixed. (ii.) *Secondary:* State lycées, communal colleges, and many private establishments, 7-yrs. course, either (a) purely classical; (b) purely modern; (c) Latin and sciences; or (d) Latin and modern languages. Degree of Bachelor conferred on completion. For females, a similar organisation, course 5-6 yrs. *Sèvres* school and the *Sorbonne* Association well-known. (iii.) *Special Schools* are very numerous, many public institutions

being dependent on ministries other than that of Public Instruction. (iv.) *Universities* (State universities alone grant degrees, but numerous private faculties and private institutions further higher education): Aix, Algiers, Angers, Bordeaux, Caen, Clermont, Dijon, Grenoble, Lille, Lyon, Marseilles, Montauban, Montpellier, Nancy, Nantes, Paris, Poitiers, Rennes, and Toulouse.

COMMUNICATIONS.—The principal rivers of France are the Seine, Loire, Garonne, and Rhône; the navigable waterways having a length of 4,214 miles, with 3,263 miles of canals. The system of railroads in France is very extensive; they are almost entirely *concedés*, and become State property after the expiration of the concession. The length of lines of general interest, inclusive of local lines, open for traffic on 31 December, 1921, was 27,683 miles, the total receipts from passenger and goods traffic, &c., being £126,299,380 (£1 = 50 fr.). The length of telegraph wires is 118,129 miles, and of telephone lines 99,514 miles.

Shipping.—The gross tonnage of the French mercantile marine in 1920 was 2,783,289 gross tons, of which 317,967 gross tons were sailing vessels. Under the Armistice clause France has received 109 ex-German vessels (445,543 gross tons). During the year 1920 the tonnage of French and foreign vessels entering French ports amounted to 28,790,399 tons, of which 7,426,723 tons were French, while the total clearings amounted to 16,947,025 tons, of which 5,291,395 tons were French. The chief ports are Marseilles, Rouen, Bordeaux, Le Havre, Calais, Boulogne, Dunkirk, and Cherbourg. A bill was passed by the Chamber in 1921 for the canalisation of the Rhone, which will make the river navigable for 1,200 ton vessels from the sea to Switzerland and will also provide electric power and irrigation to the surrounding departments.

COMMERCE.—The principal imports are wool, cotton, coal, silk, oleaginous fruits and seeds, machinery, raw skins, cereals, timber, caoutchouc, copper, petroleum oils, coffee, and wines. The principal exports are cotton tissues, silk tissues, wool, woollen tissues, wines, smallwares, automobiles, &c., silks, raw skins, millinery and artificial flowers, dressed skins, tools and metal goods, machinery, pig iron, butter, table fruits, refined sugar, brandy and liqueurs, fish, and cheese.

* "Special" Revenue is that recoverable under the Peace Treaties.

Alsace-Lorraine.—*High Commissioner*, M. Mirhan (1920). Alsace-Lorraine, formerly a part of the Holy Roman Empire, was ceded to France in 1648 at the Peace of Westphalia, and was ceded to Germany by the *Treaty of Frankfurt* (May 10, 1871), after the Franco-Prussian War. At the close of the War, 1914-1918, the Provinces were regained by France under the *Treaty of Versailles* (June 28, 1919). They embrace the fertile plain between the Rhine and the Vosges, and stretch beyond these mountains as far as Luxembourg. Wine, tobacco, hops, iron, and coal are among the leading productions, and the cotton industry is most flourishing. The area is 5,605 square miles; the population in March, 1921, was 1,709,749. Principal towns, Strassburg (pop. 166,767), Mühlhausen, and Metz.

Algeria. The three departments of Algeria—Algiers, Oran, and Constantine—form an integral part of France, under a Governor-General, assisted by a Consultative Council. These departments lie between 4° 36' W. to 6° 16' E. longitude, 37° 6' N. to an undetermined S. limit, about 30° N., covering an area estimated at 222,120 square miles, with a population (1921) of 5,806,090, of whom 829 were Europeans and 4,976,262 natives. The revenue in 1922 was estimated at francs 707,047,499, and the expenditure at francs 707,326,774. The bulk of the trade is with France, the exports to France amounting in 1920 to francs 934,715,000 (total exports fr. 1,355,372,000), and the imports from France to fr. 2,291,005,000 (total imports fr. 3,072,707,000). The exports consist mainly of wine, wheat and other cereals, sheep and oxen, skins, fruits, zinc and iron ores, olive oil, phosphates (372,019 metric tons in 1921), cork wood, esparto grass, manufactured tobacco, and vegetables. The principal imports from the U.K. were coal and patent fuel, machinery, cotton oil, cotton tissues, tin plates, clothing, and prepared skins. Iron, copper, quicksilver, zinc, and lead mines are being worked. In 1919 there were 2,228 miles of railroad open for traffic; and in 1921 the number of ships engaged in foreign trade entering and clearing Algerian ports was 4,067, of a net tonnage of 7,685,111 tons. The principal town is Algiers, the capital (population, 1921, 551,949), a most important coaling station and much frequented as a health resort; other large towns are Oran, Constantine, Bône, and Tlemçne. Governor-General, M. Théodore Steeg.

CAPITAL, Paris. Population (1921), 2,906,472; there are 82,127 houses and 1,149,366 families according to the census of March 1921.

FLAG: The "tricolour," three vertical bands blue, white, red (blue next to flagstaff).

BRITISH CHAMBER OF COMMERCE, 6 Rue Halevy, Paris, IXème. *President*, John Laurier.

There are also British Chambers of Commerce at 2, Rue Beauvau, Marseilles, and 4, Avenue Massena, Nice.

Paris is distant from London 267 miles; transit, 7 to 8 hours.

FRENCH COLONIES.

Colony, &c.	Area.	Population.
Indo-China	257,000	18,000,000
Asia Minor	150,000	4,500,000
Africa	4,100,200	43,550,000
America	33,200	500,000
Oceania	10,000	100,000
Total	4,550,400	66,650,000

In ASIA.—*French India* includes Pondicherry, on the Coromandel coast; Chandernagore, on the Hooghly; Karikal, in the Cauvery delta; Yanaon, in the Godavery delta; and Mahé, on the Malabar coast—the total area being 200 square miles with an estimated population of 277,700. *French Indo-China* comprises the possession of Cochin-China and the four protectorates of Cambodia, Anuam, Tonkin, and Laos. In 1898–9 the port of Kwang-Chow-Wan was also acquired on lease from China. The capital is Hanoi, in Tonkin, and the total area is 309,979 square miles, with a population (1912) estimated at 16,600,000.

In ASIA MINOR.—The French mandatory sphere of *Syria, Cilicia and Lebanon* has a total area of about 150,000 square miles, with an estimated population of 4,500,000 (see also pp. 830–1).

In AFRICA.—*Algeria* (see above) is an integral part of France. *Morocco* (see p. 807–8) is a French (and partly Spanish) protectorate.

Tunis (*Bey of Tunis*, Sidi Mohammed ed Habib, acceded 1922) has been a French protectorate since 1881. It lies between Algeria and Tripoli, and extends southwards to the Sahara, with a total area of about 45,000 sq. miles and an estimated population of 2,000,000, of whom about 600,000 are Berbers and 500,000 Arabs. The valleys of the northern region support large flocks and herds, and contain rich agricultural areas, in which wheat, barley, and oats are grown. The vine and olive are extensively cultivated. The principal minerals are coal, copper, lead, zinc and iron, and phosphates and marble are also worked. The chief exports are phosphates, olive oil, wheat, esparto grass, barley, beans, blankets, sponges, and dates; the chief imports are textiles and other manufactures, iron, steel, machinery and provisions. Eighty per cent. of the trade is with France and Algeria. *Tunis*, the capital, has a population of 230,000; other towns are Sfax (84,000), Bizerta (30,000), Susa (30,000), Kairwan (22,000), Gabes (16,000), and Monastir (6,000). *French West Africa* extends from Mauritania to Dahomey, and has a total area of 1,509,733 square miles, and a population of 11,344,076. It consists of *Senegal* (74,000 sq. miles, pop. 1,250,500), capital, St. Louis; *Upper Senegal Niger* (304,000 sq. miles), and the *Niger Military Territory* (533,000 sq. miles), which have a total population of about 6,036,200; *French Guinea* (92,600 sq. miles, pop. 1,737,350);

Ivory Coast (126,100 sq. miles, pop. 1,216,300); and *Dahomey* (38,000 sq. miles, pop. 878,500); adjoining Dahomey is the French Sphere of the former German colony of *Togoland* (23,400 sq. miles, pop. 800,000); while the hinterland of these colonies forms the *French Sahara*, which has an estimated area of 924,160 sq. miles and a population of about 450,000. *French Equatorial Africa* consists of the *French Congo* (513,000 sq. miles, pop. 9,000,000) and of the French Sphere in the former German territory of *Cameroun* (267,000 sq. miles, pop. 2,750,000). *French East Africa* consists of the *Somali Coast* (46,300 sq. ms., pop. 208,000) and of the large island of *Madagascar* (226,000 sq. miles, pop. 3,553,500) with its dependencies (Nossi Bé, Sainte Marie, Réunion, and the Mayotte-Comoro Islands, and St. Paul, Amsterdam, and Kerguelen Islands). Agriculture and cattle raising are the principal industries; the minerals include gold, silver, iron, copper, lead, and zinc. The chief exports are gold, cattle, bark, manioc (for arrowroot), beans, hides, skins, fibre, rice, timber and rubber; the chief imports are cottons, metal manufactures, wines and spirits, coal, clothing, lime and cement. The capital, Antananarivo, has a population of 75,000; other towns are Tamatave (the chief port), Majunga, Diego-Suarez, Mananjary, Tuléar, Andevoranto and Vohémar. Off the south-east coast are the uninhabited islands of St. Paul, Kerguelen and Amsterdam. There is now direct communication across French and British territory in Africa, with posts on the Atlantic and Indian ocean.

In AMERICA.—Off the south-east coast of Newfoundland are two small groups of islands, of which the largest are St. Pierre and Miquelon. In the West Indies, Martinique and Guadeloupe, with Basse Terre, Marie Galante, Ile des Saintes, Petite Terre, St. Bartholomew, and St. Martin; and in South America, Cayenne or French Guiana. The total area of French possessions in North and South America is 35,320 square miles, with a population of 428,850.

In AUSTRALASIA.—New Caledonia (7,200 sq. ms., pop. 50,500) is a large island with many dependencies, and the Society Islands (Tahiti, &c.) and other islands have a total area in the Pacific Ocean of 8,378 square miles, with a population estimated at 81,100. The New Hebrides are under joint Franco-British administration.

GEORGIA. (Sakartvelo.)

President of the Council of People's Commissars, M. Divani.

Commissar for Foreign Affairs, M. Svanidze.
Chargé d'Affaires of the National Georgian Government (exiled by Soviet invaders), M. Soumbasoff, 58 Redcliffe Square, S.W. 10.

A former Kingdom in Transcaucasia, with a history of more than 2,000 years as a State, was annexed by Russia in 1801 in violation of the Treaty of Alliance of 1783. At the beginning of 1918 it regained its independence. The *Georgian Socialist Soviet Republic* comprises the former governments of Tiflis and Kutais, the districts of Zakathali, Sodehi, Sukhum and Batum; the total area (excluding the Province of Lazistan, now Turkish, and claimed by Georgia ethnographically), is about 45,000 sq. miles with a population (1915) of 3,175,156. The Republic is bounded on the N. by the Caucasian Mountains, on the S. by Armenia, on the E. by the Republic of Azerbaijan, and on the W. by the Black Sea.

It includes the important Black Sea ports of Batum (pop. 50,000) and Poti (pop. 30,731). Other large towns are Tiflis, the capital (pop. 1914, 356,000), Kutais (pop. 85,151), Sukhum (pop. 61,974), Tchiaturi, the centre of the manganese industry, (pop. 25,675), Dusheti and Signagi. The Railway system of Georgia extends to 970 miles. The trunk line 556 miles long, connects the Black Sea ports of Pito and Batum with Baku on the Caspian Sea. Batum and Baku are also connected by a petroleum pipe line. The Republic is very rich in mineral resources such as manganese, iron, copper, silver-lead, petroleum, coal, etc. It has over 500 mineral springs, partly unexploited, among them many containing sulphur and radium. Its agricultural resources are also very considerable.

The area of Germany is approximately 208,780 square miles, with a population of about 65,500,000. The population at the census of 1910 was 64,925,993, of whom 32,031,967 were males and 32,871,456 females. In 1920 there were 36,550 divorcees (in 1919, 14,528), or 59.1 per 100,000 of the population, against 36.2 in 1919 and 26.6 in 1913.

The religious confessions of the people of the former German Empire were divided in 1910 as follows:—39,991,421 Protestants, 23,821,453 Roman Catholics, 283,946 Christians of other categories, 615,021 Jews, and 214,152 adherents of other religions, or unknown.

There are 44 large towns with over 100,000 inhabitants, and of these 30 are in Prussia, 4 in Saxony, 3 in Bavaria, 2 in Baden, and 1 each in Württemberg, Hesse, and Brunswick, while two of the three Hanse Towns also exceed 100,000.

At the outbreak of war, Aug., 1914, "Germany" was a Confederate League, bearing the name "German Empire," under the hereditary presidency of the King of Prussia, holding the title of "German Emperor."

By the Treaty of Versailles the "Reichsland" of Elsass-Lothringen and the Saar coal basin (temporarily) were ceded to France; parts of Posen and West Prussia to the newly-formed Republic of Poland; North Schleswig to Denmark; and Moresnet and Malmédy to Belgium. Plebiscites held in June 1920 in parts of East and West Prussia yielded majorities for Germany. A plebiscite to decide the fate of Upper Silesia, which was held under the Peace treaty, resulted in division between Poland and Germany. On March 7, 1921, negotiations between German representatives and the Supreme Council of the Allies on the methods of payment of the claims for reparation having broken down, the forces of the Allies (which were in occupation of "bridge-heads" across the Rhine) advanced to Duisburg, Ruhrort, and Düsseldorf on the right bank, and a general control, since abolished, was established over the customs administration.

The Colonial possessions of the German Empire extended over 1,035,086 sq. miles in Africa, 96,220 sq. miles in the Pacific, and 2,943 sq. miles in Asia—a total of 1,134,239 sq. miles, with a population estimated in 1914 at 15,000,000. By the Treaty of Versailles Germany renounced her overseas possessions, with all rights and titles therein, and the delegates to the International Council at Paris allocated Togoland and Kamerun to Great Britain and France; German East Africa to Great Britain; German S.W. Africa to the Union of South Africa; the German Pacific possessions N. of the Equator to Japan; and those S. of the Equator to Australia and New Zealand.

On Nov. 9, 1918, the German Emperor abdicated, and the Government of the country was taken over by the Council of the People's Commissioners in Berlin. On Nov. 11, 1918, Germany was granted an armistice, and on June 28, 1919, peace was signed at Versailles. In Jan. 1919, elections were held to a National Assembly on the basis of universal adult suffrage (male and female), and on Feb. 11, 1919, the first President of the German Versammlung was elected at Weimar. Under the new Constitution of August 11 1919, the federal legislature consists of a Reichstag representing the whole nation and elected by popular suffrage (male and female), with proportional representation, and a Reichsrat representing the separate States. The people possess the right of initiative and the referendum. Bills dealing with economical questions or social issues arising thereout must first be submitted to the new advisory Economical Council (Reichswirtschaftsrat).

A counter-revolution in the Junker (aristocratic) interest was temporarily successful in March, 1920, and the President and Cabinet abandoned the capital; but in a few days the revolutionaries capitulated and the Republican administration resumed direction and control.

PRODUCTION AND INDUSTRY.—Germany, up to the commencement of the War, was becoming more and more a manufacturing country. In 1907, 32.6 per cent. of the population were supported by agriculture, 37 per cent. by industry and mining, 11.5 per cent. by trade and communications. Of the total area in 1907, 78,632,140 acres were under cultivation, and 34,272,141 acres were woods and forests. The Live Stock (Oct. 1, 1919) included 2,460,000 horses, 16,360,000 cattle, and 11,000,000 pigs; large numbers of these animals were ceded

to France and Belgium (as part of the reparation) under the *Treaty of Versailles*. Germany supported about nine-tenths of her population by her own produce in 1914. The mineral produce was valued in 1912 at £592,250,000, and included 190,209,440 tons of coal, 87,233,084 of lignite, and 28,607,903 of iron ore; potash, rock-salt, lead-ore, gold and silver ore, graphite, asphalt, petroleum, Epsom-salts, boracite, tin-ore, quicksilver-ore, antimony-ore, cobalt-ore, nickel-ore, arsenic-ore, manganese-ore, bismuth-ore, uranium-ore, wolfram-ore, pyrites, vitriolic-ore, and alum-ore are also worked. Crefeld, Elberfeld-Barmen, Chemnitz, Augsburg, and the provinces of Westphalia and Silesia are the great centres of the textile industries. By laws of 1919 and 1920, all coal, heavy iron and steel, potash and coal-tar producing concerns were compulsorily fused into All-German Syndicates, governed by assemblies representing Producers, Traders and Consumers, with equal representation for Employers and Employed.

OLD AGE AND INFIRMITY INSURANCE.—The German scheme of social legislation gives all subordinate bread-winners in Germany a legal right to pecuniary subvention when unfitted for work through sickness, accident, premature infirmity, or old age. Insurance is compulsory. This National Insurance is based on mutual insurance and self-administration. The Infirmary Insurance Act came into force Jan. 1, 1900. The insured include all persons working for wages or salary as workpeople, artisans, journeymen, apprentices, domestic servants, landresses, dressmakers, sempstresses, housekeepers, charwomen; overseers, foremen, engineers, assistants, clerks and apprentices in merchants' offices (excepting assistants and apprentices in chemists' shops), schoolmasters, schoolmistresses, tutors and governesses, including foreigners working in Germany under these categories. Pensions for premature infirmity are given to insured persons when unfit for work; old age pensions to all insured persons on attaining the age of 70, though still capable of work. A comprehensive project of reform of the State insurance legislation became law in 1911. The new law codified previous legislation, established new Insurance Authorities, reduced working-class influence in the Accident Insurance organisations, provided pensions for widows and orphans, and made other changes of importance. Another Bill extending Insurance benefits to private officials, clerical employés and others above the class of manual workers, became law in 1911. A Bill establishing Federal Unemployment Insurance for industrial workers (not farm labourers or domestic servants), clerks, actors and orchestra musicians, and a Bill providing a Federal Labour Exchange Organization, are before the Reichstag. The income limits within which social insurance is compulsory are being constantly changed owing to the currency depreciation.

DEFENCE.—In the War of 1914-18 the German armies reached their zenith as a military machine during the German Offensive movement of July, 1918, when 207 divisions were available on the Western Front. At the date of the Armistice (Nov. 11, 1918) only 184 divisions were available, and the reserves had dwindled from a proportion of over one-half of the troops in action to that of one-eleventh only, while the 184 divisions were each barely 6,000 strong, all ranks. By the grant of an armistice the German armies

escaped further encounters with the Allied Armies, the reserves of which were increasing in numbers every day, while their strategical position was becoming every day more satisfactory to Marshal Foch, their generalissimo. By Article 160 of the *Treaty of Versailles* the German *Military Forces*, as from March 31, 1920, must not comprise more than seven divisions of infantry and three divisions of cavalry, a total force of 100,000 all ranks. By Article 181 of the *Treaty*, the German *Naval Forces* must not exceed 6 battleships of the Deutschland or Lothringen class, 6 light cruisers, 12 destroyers, and 12 torpedo boats. No submarine vessels are to be included in the naval forces, and all war vessels in excess of the above numbers are to be broken up or devoted to commercial purposes. Under the terms of the Armistice of Nov. 11, 1918, the German High Sea Fleet surrendered to the Allies (Nov. 21, 1918) and was interned in Scapa Flow, manned by German naval crews. It was scuttled by its crews in Scapa Flow, while in custody, on June 21, 1919. In consequence of this breach of the Armistice agreement by the German crews the Allies (Nov. 20, 1919) called upon the government to surrender 5 light cruisers, and certain floating docks, cranes, and dredgers, in addition to the previous naval surrenders. The interned vessels Berlin, Seydlitz, Santa Fé and Yorek are to be disarmed and treated as merchant ships. By Article 198 of the *Treaty* the armed forces of Germany must not include any military or naval *Air Forces*, and no dirigible balloons, aeroplanes, seaplanes or flying boats.

COMMUNICATIONS.—The total length of the *Railroads* at end of 1919 was 55,950 kilometres, of which all except 3,623 kilometres belong to the Republic. The number of registered automobiles and motor cycles (July 1, 1921) was 90,390. Length of *Telegraph Lines* (1920) 223,300 kilometres (length of wires, 2,385,600 kilometres); telegrams handed in, 74,736,000; post offices, 36,497; telegraph offices, 47,485; wireless stations, 162; telephone call-stations, 40,146; letters delivered, 4,550,100,000; cash on delivery orders, 9,895 million marks; money orders, 15,055 million marks; telegrams despatched, 74,736,000; telegrams received, 76,554,000. The number of employés in the service of posts, telegraphs, and telephones was 444,453. The State postal services were taken over by the Federal Government in 1920. In addition to some 6,000 miles of navigable rivers there are over 1,500 miles of canals and 1,600 miles of ship canals. At the outbreak of the War of 1914-1918 Germany ranked second to Britain in the list of maritime countries. On January 1, 1913, the Mercantile Marine consisted of 2,098 sea-going steamers of 17'65 register tons and upwards (4,380,348 tons gross register), and of 2,420 sailing vessels (447,870 tons gross register); number of seamen, 77,746 (January 1, 1912, 75,130). Completed in German yards in 1920 were 290 vessels of 243,004 nett tons for German firms, and 40 vessels of 84,723 tons for foreign firms. Eleven new shipyards were established during the War. Some of the larger ships were interned in foreign harbours during the War, and by the *Treaty of Versailles* reparation is to be made for the losses inflicted on the Allies by the surrender of merchant ships. The chief ports of Germany are Hamburg, on the Elbe; Bremen, on the Weser; Stettin, on the Oder; Königsberg, on the Pregel; Kiel, on the Baltic (connected with the Elbe by the Kaiser-

Wilhelm Canal); and Lübeck, on the Baltic. Kiel is being converted into a free port. Under the Peace Treaty Danzig became a Free State, subject in its foreign affairs to the Polish Republic. Shipping traffic has rapidly recovered, Hamburg shipping having in August, 1922, exceeded that of August, 1913.

FINANCE.—Under Articles 248-263 of the Treaty of Versailles the German Government undertook to pay the cost of the Armies of Occupation from Nov. 11, 1918, until they shall be withdrawn, the occupied area extending to the Rhine (with "bridgeheads" on the right bank) from Eiten, on the Netherlands frontier, in the north, to the junction of the German-Lorraine frontiers, in the south. The amount of the reparations due by Germany under the Treaty was fixed in January, 1921 (by the Financial Council of the Allies at Brussels) at 132 milliards of gold marks (£6,600,000,000) payable in bonds, to be redeemed by annual payments of 2 milliard gold marks, together with a sum equivalent to 26 per cent. of German exports. Of the amounts thus payable the various shares from 1921-1929 were apportioned to France 52 ninety-second parts, Great Britain 22, Italy 10 and Belgium 8 ninety-seconds; from 1929-1932 the shares are varied to France 130 two hundred and thirtieth parts, Great Britain 55, Italy 25 and Belgium 20 two hundred and thirtieths; and for the succeeding 31 years France 156 two hundred and seventy-six parts, Great Britain 66, Italy 30 and Belgium 24 two hundred and seventy-six parts.

German Budget, 1922-23.

	Paper Marks.
Budget Expenditure (Ordinary).....	115,521,633.300
Budget Revenue (Ordinary)	115,521,633.300
Expenditure (Extraordinary).....	236,770,261.100
Revenue (Extraordinary)	236,770,261.100

The "execution of the Peace Treaty" (mainly Reparations) is booked to cost in the financial year 226,469,739,400 marks. Owing to the continuing currency depreciation all the above estimates will be heavily exceeded.

The Funded Debt (which stood at 4,697,897,600 marks on April 1, 1914) amounted on March 31, 1921, to 55,131,452,200 marks, and the Floating Debt to 281,148,700,000 marks.*

German Trade.

	1913.	1921.

FORMER GERMAN KINGDOMS.

PRUSSIA.

GOVERNMENT (April 28, 1921).

President, Herr Braun.
Interior, Herr Dominicus.
Finance, Herr Richter.
Agriculture, Herr Wendorf.
Trade and Commerce, Herr Siering.
Instruction and Worship, Herr Beelitz.
Minister of Justice, Herr am Zehnhoof.

The former Kingdom of Prussia comprises the larger portion of Germany, with a total area in 1918 of 101,075 sq. miles and a population of about 33,000,000.

* Whereof 233,321,154,700 marks raisable by loan.

† May-December inclusive only; January-April not published.

Of the total population (1910) 19,847,725 were males and 20,317,494 females. The number of births in 1914 was 1,202,528, against 1,209,500 in 1913, while in the year ending April 30, 1916, they were 10,700 fewer than in 1915, a decrease of 28 per cent. The number of deaths in 1914 was 802,776, against 656,490 in 1913. Marriages were 286,197, against 323,709. Between 1904 and 1914 the excess of births over deaths fell from 562,508 to 399,752.

Prussia possesses a large number of navigable rivers intersecting the country—viz., the Pregel, Oder, Elbe, Weser, and Rhine. The coasts of the Baltic and North Seas form a number of gulfs and bays. The principal mountains are the Harz and the Giant Mountains, the latter reaching an altitude of 5,255 feet. The forests are extensive, occupying an area of nearly 20,435,491 acres, chiefly consisting of fir. Minerals consist of coal, iron, copper, lead, potash, alum, nitre, zinc, cobalt, sulphur, nickel, arsenic, baryta, amber, agate, jasper, onyx, &c., and, to a small extent, silver. Salt (from the brine springs of Prussian Saxony) is abundant. Metallic ores, coal, salt, precious stones belong partially, and amber totally, to the Crown. Agriculture and the rearing of cattle are the industries employing the largest number of persons, but Prussia has long ceased to be a mainly agricultural State. Wheat, rye, oats, barley, peas, millet, rape-seed, maize, linseed, flax, hemp, tobacco, sugar-beet, hops, &c., are extensively cultivated. Prussia's manufactures comprise practically all branches. The cotton works are extensive, and there are numerous manufactories of silk, woollen, mixed cotton and linen fabrics, including shawls, carpets, &c., and woollens, with leather, earthenware, glass, paper, and tobacco manufactures, as well as metallurgical works of great importance and large output. Brewing is a business of great importance.

Marks.

Revenue (Estimate) 1921-22	16,776,716,736
Expenditure do.	16,776,716,736
Total debt, 1920	5,900,000,000

The whole of the old Funded Debt of Prussia has been taken over by the Republic under the arrangement for transfer of the Prussian State Railways.

CAPITAL, Berlin, on the Spree. Population (1910), 2,070,695. In 1920, by fusion of suburban municipalities and of some adjacent rural communes, was created Great Berlin with a population of 4,000,000.

There are 30 towns with a population exceeding 100,000, of which the largest, in addition to the Capital, are Cologne, on the Rhine (516,167), Breslau, on the Oder (511,891), Frankfurt, on the Main (414,598), Düsseldorf, on the Rhine (357,702), Charlottenburg, W. of Berlin (305,181), Hannover, on the Leine (302,384), Essen, on the Ruhr (294,629), and Magdeburg, on the Elbe (279,685).

BAVARIA.

Minister-President, Count Lerchenfeld.

The former Kingdom of Bavaria is divided into two unequal parts. The eastern portion, comprising eleven-twelfths of the whole, is situated between 47° 16'—50° 34' N. lat. and 9° 01'—13° 50' E. long.; i.e. the western part, forming the Palatinate, on the left bank of the Rhine. The total area is 29,286 square miles, and the population (in 1910) 6,887,291. The rivers are

the Danube, Rhine, Main, Lech, Isar, and Inn. The Bavarian forests are extensive, covering nearly a third of the country; the soil is highly productive, wheat, rye, oats, and barley being the chief products; buckwheat and maize are also grown, and tobacco is one of the staple articles. Wine is produced in the Palatinate, in Lower Franconia, and in Middle Franconia. The hop-plant is most extensively cultivated. Many important manufactures are carried on. The brewing of beer is carried to great perfection. The chief imports are sugar, coffee, woollens, silks, stuffs, drugs, hemp, cotton, tobacco, and flax; the chief exports are timber, grain, wine, hops, beer, leather, glass, jewellery, &c.

Marks.

Budget, 1920-1921 2,921,240,521
Public debt, Oct. 1, 1921 153,673,666

CAPITAL, Munich, on the Isar. Population (1910), 596,467. Other large towns are Nürnberg, N.W. of Munich (332,651), and Augsburg, on the Wertach-Lech (102,293).

SAXONY.

The former Kingdom of Saxony has an area of 5,856 English square miles, with a population (1910) of 4,806,661. More than one-half of the surface is arable, and has always been in a high state of cultivation, producing the usual cereals and leguminous plants, with rape, buckwheat, flax, and fruits. The forests supply timber of excellent quality; minerals are rich and abundant (coal, silver, tin, bismuth, cobalt, iron, zinc, lead, nickel, arsenic, &c., besides marble, porcelain, earth, and various gems); special manufactures of Saxony are:—Machinery, cottons, worsted yarns, soft wool tissues, carriages, furs, clothing, jute, furniture stuffs, hosiery, gloves, and other knitted goods, laces, embroideries, curtains, paper, wood and straw pulp, bottle glass, musical instruments, chocolates, sweets, cigars, and Meissen porcelain. The imports are chiefly corn, wine, salt, cotton, silk, flax, hemp, wool, coffee, tea, &c. Its chief towns are Dresden (pop. 551,697), Leipzig (pop. 587,635), the great book-market, with, next to those of Berlin and Munich, the most frequented University of Germany (having 5,925 matriculated students in 1912-13); Plauen (pop. 121,272); Zwickau (pop. 73,542), and Chemnitz (pop. 287,807), the Manchester of Saxony.

WÜRTTEMBERG.

The former Kingdom of Württemberg has an area of 7,534 English square miles, and a population (in 1910) of 2,437,574, of whom 30 per cent. are Roman Catholics. It possesses rich cultivated fields, orchards, gardens, and hills covered with vines; the forest, grain, and pasture-land being nearly equally distributed throughout. Spelt, wheat, rye, oats, barley, hemp, hops, potatoes, beans, maize, and turnips are the principal agricultural products. The minerals, consisting chiefly of salt, iron, granite, limestone, ironstone, fireclay, &c., abound in the kingdom; mineral springs are also numerous. The principal rivers are the Neckar and the Danube. The manufactures generally are linen, woollen and cotton fabrics, carpets, paper, leather, gunpowder, firearms, tobacco, iron and steel goods,

pianos, clocks, pottery, cabinet work, &c. There are also many oil mills, breweries, and brandy distilleries. The principal exports are grain, cattle, wood, gunpowder, firearms, pianos, clocks, salt, oil, leather, woollen, hosiery, cotton and linen fabrics, stays, beer, wine, &c.

CAPITAL, Stuttgart. Population (1910) 285,589.

FORMER GRAND DUCHIES.

Baden, separated by the Rhine from France (Alsace) and Switzerland, has an area of 5,819 square miles, with a population (1910) of 2,142,833. A great part of the surface is mountainous and covered with forest trees, including the Schwarzwald (Black Forest) and the Odenwald, but more than three-fifths of the total area is under cultivation, corn, wine, fruit, potatoes, tobacco and hops being the chief agricultural products. The principal manufactures are cigars, cotton and silk stuffs, brushes, jewellery and trinkets, clocks, chemicals, paper and machinery. More than half the population are Roman Catholics. Capital, Karlsruhe, pop. (1910) 134,313. Other large towns are Mannheim (206,049), Freiburg (83,324), Pforzheim (73,786), and Heidelberg (56,016).

Hesse, in the West Centre, consists of Northern and Southern portions, nearly equal in size, on either side of the Main River, with a total area of 2,968 square miles and a population (1910) of 1,282,051, of whom more than half are Protestants. The country is mountainous but fertile, and agriculture is flourishing. Capital, Darmstadt, pop. (1910) 87,089. Other large towns are Mayence (Mainz) at the confluence of the Main and the Rhine (110,634), Offenbach (75,583), Worms (46,829), and Giessen (31,153).

Mecklenburg, between the Elbe and the Baltic, has a total area of 6,266 square miles, with a population (1910) of 746,400. Agriculture and stock raising are the principal industries, the Mecklenburg breed of horses being famous. The chief manufactures are bricks and machinery. Capital, Schwerin, pop. (1910) 42,519. Other centres are Rostock (65,383), Wismar (27,378), and Neu-Strelitz (11,993).

Oldenburg, on the North Sea, between the estuary of the Weser (at Bremen) and the Prussian province of Hannover, has detached territories in Lübeck (between Holstein and Mecklenburg) and Birkenfeld (Rhine Province of Prussia). The total area is 2,479 square miles, with a population (1910) of 483,042, of whom more than 80 per cent. are Protestants. The chief industries are agriculture, bee-keeping and stock-raising; the principal manufactures are brewing and distilling, tanning, tobacco and corks. Capital, Oldenburg, pop. (1910) 28,565.

Saxe-Weimar-Eisenach (now part of the new Thuringian State) consists of Weimar Eisenach and Neustadt, and 24 scattered enclaves in the Thuringian Forests of Central Germany. The total area is 1,397 square miles, with a population (1910) of 417,149, of whom the majority are Lutherans. Agriculture, fruit growing and horticulture are the principal industries, the manufactures including brewing, chemicals, woollens and hosiery. Capital, Weimar, pop. (1910) 34,582. Other centres are Eisenach (38,362), Jena (38,487), and Apolda (22,620).

FORMER DUCHIES.

Anhalt, 906 square miles, pop. (1910) 331,128; is in Central Germany. Capital, Dessau, pop. (1910) 56,605.

Brunswick, 1,418 square miles, pop. (1910) 494,339; in Northern Germany. Capital, Brunswick, pop. (1910) 143,552.

Saxe-Altenburg, 512 square miles, pop. (1910) 216,128; in East Central Germany. Capital, Altenburg, pop. (1910) 39,976.

Saxe-Coburg-Gotha (now part of Bavaria), 763 square miles, pop. 257,177; in Thuringia, Central Germany. Capital, Gotha, pop. (1910) 39,553. Coburg, pop. (1910) 23,789.

Saxe-Meiningen, 945 square miles, pop. 278,792; in Thuringia, Central Germany. Capital, Meiningen, pop. (1910) 17,131.

FORMER GERMAN PRINCIPALITIES.

Lippe, 470 square miles, pop. (1910) 150,937; Capital, Detmold (114,205). *Reuss (Elder Line)*, 120 square miles, pop. (1910), 72,769; Capital, Greiz (23,245). *Reuss (Younger Line)*, 320 square miles, pop. (1910) 152,752; Capital, Gera (49,276). *Schaumburg-Lippe*, 130 square miles, pop. (1910) 46,626; Capital, Bückeburg (6,745). *Schwarzburg-Rudolstadt*, 363 square miles, pop. (1910) 100,702; Capital, Rudolstadt (12,937). *Schwarzburg-Sondershausen*, 333 square miles, pop. (1910) 89,917; Capital, Sondershausen (7,759). *Waldeck*, 438 square miles, pop. (1910) 61,707; Capital, Arolsen (2,793).

LAND THURINGEN.

The seven Thuringian States, Saxe-Wiemar-Eisenach, Saxe-Meiningen, Saxe-Altenburg, Schwarzburg-Rudolstadt, Schwarzburg-Sondershausen, Reuss-Greiz and Reuss-Gera, have been constituted into a single state under the title Land Thuringen, with an area of 11,000 square kilometres, a population of 1,500,000, and two seats in the Federal Reichsrat. In size Land Thuringen is seventh among German states. The new state is governed by a "Volksrat." Saxe-Coburg-Gotha has joined the Bavarian Republic.

HANSE TOWNS.

The *Free Hanse Towns* comprise the three cities of *Lübeck*, on the Trave (area 115 square miles, pop. 116,599), *Bremen*, on the Weser (area, 99 square miles, pop. 313,433), and *Hamburg*, on the Elbe (area 160 square miles, pop. 1,075,420). Each has a small rural territory and has full Federal independence, with a Council of State (under the Presidency of a Burgomaster).

TRADE FLAG: Black, red and gold.

CAPITAL OF THE GERMAN REPUBLIC.
Berlin, pop. (1910) 3,070,695.

BRITISH EMBASSY.

British Ambassador, His Excellency the Rt. Hon. Lord D'Abernon, G.C.M.O. (1920) £8,000

Counsellor, Joseph Addison.

" *Consul*, I. M. Robinson.

BRITISH CHAMBER OF COMMERCE, 100 Hohestrasse, Cologne.

GREECE.

(Hellas.)

King of the Hellenes, George II., born July 7, 1890, succeeded to the throne, Sept. 27, 1922 (on the abdication of his father King Constantine).

THE MINISTRY (Sept. 29, 1922).

Prime Minister, M. S. Krokidas (acting).

Justice, Ph. Vassiliou.

Interior, M. S. Krokidas.

Marine, Rear-Adm. D. Papachrestou.

Finance, A. Diomedes.

War, Maj.-Gen. A. Charalambes.

Foreign Affairs, N. Politis.

Education, Dr. Siotis.

National Economy, E. Canellopoulos.

Refugees, Dr. A. Doxiades.

Supplies, Dr. Siotis.

Envoy Extraordinary and Minister Plenipotentiary in London, Monsieur D. Caelamianos.

Legation, 51 Upper Brook St., W. 2.

Counsellor, M. Constantine Collas.

Secretary, M. George V. Melas.

Consul-General, M. D. Inglesis (acting), 36 Gordon Square, W.C. 2.

A maritime Kingdom in the south-east of Europe, bounded on the N. by Albania, Yugoslavia and Bulgaria, on the S. and W. by the Ionian Sea, and on the E. by the Aegean, Sea of Marmora and Black Sea, with an estimated area of 65,000 sq. miles and an estimated population (1921) of about 7,000,000.

Government.—Greece became a kingdom in 1830, after a successful insurrection against the Turkish government, to which the country had been subjected since the 15th century. The legislature consists of a Chamber of Deputies (or *boule*) elected for 4 years by universal manhood suffrage, and of a Council of State. Members of the legislature are paid 4,000 *drachmae* annually. At the outbreak of the Great War the sympathies

of the reigning house of Greece appeared to be with the Central Powers, but under the influence of M. Venizelos the Kingdom eventually entered the War on the side of the Allies, and King Constantine left the country (June 11, 1917). King Alexander, who acceded to the throne, died from the effects of a monkey-bite, Oct. 25, 1920. The crown was offered to his younger brother Paul, a Regency being meanwhile proclaimed under Admiral Conduvouriotis. The November elections drove the Venizelists from office, and the Regent, having admitted M. Rallis to the Premiership, was called upon to resign. He was succeeded by Queen Olga, until a plebiscite was taken, and King Constantine was thus restored to the throne in December 1920. After the disastrous campaign in Asia Minor in Sept. 1922, a bloodless revolution caused the abdication of King Constantine in favour of his eldest son.

Prior to the Balkan Wars of 1912-13 the area was less than 25,000 sq. miles, the addition of portions of Macedonia and Epirus, Crete (2,950 sq. miles, pop. 336,151), and certain Aegean Islands increasing the area to 43,522 sq. miles. During the War of 1914-1918 Greece eventually declared for the Allies against the Central Powers, and her territories were increased by the occupation of Thrace (including the monastic republic of Mount Athos), and the islands of Imbros and Tenedos. Under an arrangement with Italy, to come into effect after the ratification of the Treaty of Sevres, the Dodecanese (12 islands) were surrendered by Turkey, and these were to be handed over to Greece by Italy with the exception of Rhodes, for which a special arrangement was made: this arrangement was, however, repudiated by Italy, and the fate of the island is in abeyance. Greece also received under the Treaty a mandate for the occupation and administration of the town and district of Smyrna, but military operations by forces of the Angora Government, under Mustapha Kemal Pasha, recovered the mandated region in Sept. 1922, the Greek forces being annihilated, and Smyrna was evacuated on Sept. 8, 1922. The country is thus composed of a continental portion (the southern part of the Balkan Peninsula), and of islands in the Aegean, Mediterranean, and Ionian Seas. The surface is nearly all mountainous; the coasts are elevated, irregular, and deeply indented.

Production.—Agriculture is the principal industry and employs more than half the population. The most important of the fruit trees are the olive, the vine, orange, lemon, fig, almond, citron, pomegranate, and currant-vine. The principal minerals are silver, lead, zinc, emery, copper, magnesium, sulphur, salt, and marble. The chief manufactures are smelting, textiles, and shipbuilding. The imports are cotton and other manufactures, corn, timber, cattle, hides, sugar, salt fish, and coal. The exports consist of wine, olives, olive oil, tobacco, currants, figs, cognac, hides, lead, iron ore, magnesite, iron pyrites, chrome ore, emery, marble, and sponges. The imports in 1920 were, from Gt. Britain, 320 million drachmæ; U.S.A. 287 million; Italy 125 million; France 109 million; and other countries 333 million. The exports were, to U.S.A., 40 million; Gt. Britain, 37 million; Italy 26 million; France, 20 million; and other countries 178 million.

Defence.—Service in the Army is universal and compulsory between the ages of 21 and 57. Both the land and sea forces were reorganised

during the War of 1914-1918, and about 150,000 all ranks fought with the Allied Armies. The Navy consisted (July, 1919) of 6 ironclads, 1 modern cruiser, 14 destroyers, 6 torpedo-boats, and 2 submarines.

Education is free and compulsory, maintained by local taxation supplemented by State grants. Secondary education is somewhat backward, particularly in the country districts. The University at Athens is of some repute.

Finance.—The debt in 1912 was 1,040,900,000 drachmæ, and the Balkan Wars of 1912-13 added 354,960,000 drachmæ, the Great War added 1,028,000,000 drachmæ, and subsequent military operations to March, 1921, were responsible for 1,776,140,000 drachmæ.

Communications.—There were (1919) 1,400 miles of railroad open for traffic. There is a ship canal cutting through the Isthmus of Corinth for ships up to 1,500 tons. The post offices (in Old Greece) number 1,150, dealing with 36,000,000 postal packets; telegraphs, 4,951 miles. The mercantile marine consists of 110 sailing vessels above 100 tons capacity, and 298 steamers (449,184 tons). The principal harbours are the Piræus (port of Athens), Syra, Patras, Salonica, Volo, Corfu, Kalamata, Laurium, Cavalla, and Canea (Crete).

GUATEMALA.

República de Guatemala.

President (1922-1926), José María Orellana,
 assumed office Dec. 9, 1921.

Min. of Foreign Affairs, Señor Don Adrian
 Recinos.

Minister in London M. Arroyo.

Consul in London, D. Bowman, 11 Queen Vic-
 toria Street, E.C. 4.

Guatemala, the most northerly of the Repub-
 lican States of Central America, is situated in N.
 lat. from 13° 45' to 17° 49', and in W. Long. from
 88° 12' 49' to 92° 13' 43', and comprises an area of
 42,456 square miles, and a population in 1921 of
 1,600,535. The Republic is divided into 23 depart-
 ments, and is traversed from W. to E. by an
 elevated mountain chain, containing several
 volcanic summits rising to 13,000 feet above the
 sea; earthquakes are frequent, and the capital
 was destroyed by an upheaval in Jan., 1918. The
 country is well watered by numerous rivers; the
 climate is hot and somewhat malarious near the
 coast, but very temperate and healthy in the
 higher regions. About 620 miles of railway were
 open for traffic in 1917. There were 4,543 miles
 of telegraph working in 1921. The chief ports
 are San José de Guatemala and Champerico on
 the Pacific, and Livingston and Puerto Barrios
 on the Atlantic side. The principal export
 is coffee, other articles being bananas, sugar,
 timber, *chicle* (chewing gum), hides and beans.
 Spanish is the language of the country.

	1918-19.	1919-20.
Revenue	£443,750	£508,900
Expenditure	310,700	404,130

 New Orleans, 7 days, thence to London, 8 days.

HAITI.

(Republique d'Haïti.)

President, M. Louis Borno, assumed office

May 15, 1922 £4,800

Foreign Affairs, Léon Dejean.

Chargé d'Affaires and Consul-General, Abel
 Théard, 6 Trevanion Road, West Kensington.

The Republic of Haiti is the western or French
 portion of the island of San Domingo, which,
 next to Cuba, is the largest of the "West India"
 Islands.

The island was visited on Dec. 6, 1492, by
 Christopher Columbus, who named it *Espagnola*,
 the native name being *Haïti* (mountainous) or
Quisquea (vast). The Spaniards explored the
 island and almost exterminated the 2,000,000
 native Indians, whom they replaced with African
 negroes. By the Treaty of Ryswick (1697) the
 western portion of the island was ceded to
 France, and in 1803 the territory was abandoned
 by the French, and a republic was proclaimed
 under the aboriginal name of Haïti. In 1822
 the rule of the Haitian President was extended
 over the whole of the island, the eastern portion
 having declared its independence of Spain
 in 1821. Since 1844 the eastern portion has
 formed a separate republic (see Dominican
 Republic).

The area of the republic is 10,200 square
 miles, with a population estimated at 2,500,000.
 The mountains are richly and heavily timbered,
 and susceptible of cultivation nearly to their
 summits; it is probably the most fertile spot in
 the West Indies, whilst its harbours, especially
 Port-au-Prince, offer considerable facilities to
 foreign trade. The principal productions are
 coffee, logwood, cocoa, cotton, hides, sugar, honey,
 gums and oilseeds, these being the chief exports.
 It is said to contain mines of gold, silver, copper,
 tin, and iron. Its commercial prosperity has
 been almost annihilated by repeated revolutions.
 In November, 1915, both Houses of the Con-
 gress ratified a treaty with the U.S.A., estab-
 lishing a virtual protectorate over the Republic,
 which came into effect in May, 1916. An armed
 Constabulary, rural and urban, under American
 officers, has been constituted, and a coastguard
 service is attached. On Nov. 17, 1920, some
 prominent Haytians met and formed the
 "Union Patriotique," an association for raising
 funds by public subscription all over the country
 for the purpose of sending delegates to plead
 the cause of the Haytian people. It was arranged
 to send a delegation of three members to New
 York and Washington, and on February 6,
 1922, two of them left, the third follow-
 ing two months later. It appears that the
 Haytian cause has found supporters there, and
 as a result of the visit of this delegation a
 Senatorial Commission of enquiry visited the
 island (Nov.-Dec. 1921), and in their subsequent
 report advised the U.S. Government to maintain
 the occupation. The Constitution was amended
 in June 1918, and under its provisions the Pre-
 sident is elected for four years and there is an
 elective legislation. The principal foreign trade
 is carried on with the United States, Great

and Greater Britain, France, and Germany: the principal articles imported from Great Britain in 1919-21 were thread, hosiery, piece-goods, jute bags, hardware, and agricultural tools. French is the language of the country.

The HEJAZ. See Arabia.

HONDURAS.

(República de Honduras.)

President (1920-1924). General Rafael Lopez Gutierrez, assumed office Feb. 1, 1920.

Consul-General in London, A. B. Ryde, 4 Lloyds Avenue, E.C. 3.

The Middle State of Central America, stretching in N. lat. between 13° 10' and 16°, and W. long. between 83° 10' and 88° 40'; containing 44,275 English square miles, with a population estimated at 662,422 (1921).

Christopher Columbus landed at Cape Honduras in 1502, and in 1524 the country was settled by the Spaniards. In 1525 Hernando Cortes founded the city of Puerto Cortes and from 1539 to 1821 the country formed part of the Captaincy-General of Guatemala. From 1821 to 1839 Honduras was included in the Confederation of Central America.

The Republic of Honduras has a coast-line of nearly 400 miles on the Caribbean Sea, chief ports, Truxillo, Puerto Castilla, Puerto Cortes, Omoa, Roatan, Tela, and La Ceiba; but only about 40 miles on the Gulf of Fonseca, on the Pacific side, chief port, Amapala. (NOTE.—Amapala is on Tiger Island; port on mainland is San Lorenzo, 3 hours in gasoline launch from Amapala. From San Lorenzo by auto to capital, Tegucigalpa, 88 miles, good road, 5-6 hours. Road from Tegucigalpa to N. coast now reaches Comayagua and the journey can be made to Comayagua in 4 hours. From there to end of railroad, 3 to 4 days by mule. A through road for automobile traffic is expected to be completed shortly from Comayagua to Pito Solo, at S. end of Lake Yojoa, and work is in progress for the extension of the national railway from Potrerillos southwards to the N. end of the Lake, thus completing direct inter-oceanic transport communication. When this route is open New York will be only 7 days from Tegucigalpa.) The country is mountainous, being traversed by the Cordilleras. The soil is very fertile, the products being bananas, mahogany, fruit, cattle, sugar, rubber, rice, tobacco, coffee, indigo, sarsaparilla, hides

and skins, indiarubber, cedar, fustic, rose, henequen, and Lima wool (Kapok). There is an immense amount of uncultivated land. The number of cattle in 1920 was approximately 500,000. The forests are extensive, but there is a lack of communications and transport. Its mineral wealth is great. In 1921 there were 895 kilometers of railway open, all on the North Coast. The language of the country is Spanish.

	1918-19.	1919-20.	1920-21.

Ninety per cent. of the foreign trade is with U.S.A. American money is legal tender at 200 per cent. (2 to 1).

CAPITAL, Tegucigalpa. Pop. (1921), 40,000.

FLAG: Three horizontal bands, blue, white, blue (with five blue stars on white band).

BRITISH LEGATION.

British Minister, Hugh Wm. Gaisford (Guatemala).

BRITISH CONSULAR OFFICERS.

Tegucigalpa—Acting Consul-General and Consul, George Lyall.

Omoa and Puerto Cortes—Consul, John Hepburn (acting).

Truxillo—Consul,

Pro-Consul, Albury H. Tatum.

Distance 5,930 miles; transit, *via* New York, New Orleans, &c., 10 days; *via* Panama Canal, 15 days.

HUNGARY.

(Magyarország.)

Governor, H.S.H. Admiral Nicholas von Horthy of Nagybánya, born, 1867; apptd. March 1, 1920.

MINISTRY.

Premier, Count Bethlen.

Foreign Affairs, Count Banffy.

Interior, I. Rakovszky.

Finance, A. Kallay.

Commerce, M. de Hegreshalmy.

War, Gen. Belitska.

Justice, Dr. Tomesányi.

Agriculture, M. Nagyatádi Szabó.

Public Worship and Education, K. Klebelsberg.

Public Works and People's Welfare, Dr. I. Vass.

Alimentation, J. Bud.

Minister in London, Count Ladislas Szapary, 47 Cadogan Place, S.W. 1.

Hungary was declared a Republic on Nov. 17, 1918, its territories being decreased from the area of the former Kingdom of Hungary (which was united to the Austrian Empire by the identity of sovereigns) through the transfer of Transylvania to the Rumanians and of Croatia and Slavonia to the new Yugo-Slav Kingdom (*q.v.*) and of Slovakia and Ruthenia to Czecho-Slovakia (*q.v.*). The area of Hungary is about 36,179 sq. miles, with a population (almost entirely Magyar) estimated (1920) at 7,482,000. The political neighbours are Czecho-Slovakia on the N., Yugo-Slavia on the S., Rumania on the E., and Austria on the W.

On the declaration of Republican institutions in 1918, Count Károlyi assumed office as Pro-

* The external debt remains the same. No interest has been paid since 1872, and arrears of interest amounted on Jan. 1, 1922, to over £22,000,000.

visional President, but on March 23, 1919, Count Károlyi resigned, and was succeeded by a "Bolshevik" administration with a "Soviet" (Workmen's Council), in which Bela Kun (or Cohen) was the dominant personality. This administration was driven out of power by the successes of the Rumanian military forces (which invaded Hungary and occupied Budapest) and was followed by a Socialistic Government under Julius Peidel (Aug. 1, 1919). Six days later the Socialistic Government was superseded by an administration appointed by the Archduke Joseph, who accepted office as Provisional President, Aug. 7, 1919, but resigned in consequence of the protests of the Supreme Council in Paris.

On March 21, 1920, Admiral Nicholas von Horthy of Nagyvána was appointed Governor of Hungary by vote of the National Assembly, which gave him royal rights, with the exception that his approval is not necessary to the verification of laws made by the National Assembly.

In 1921, the ex-king Karl made two efforts to regain the throne, remaining in the country from March 26 to April 5, and from Oct. 21 until removed under escort. On each occasion the Hungarian Government was informed that a Hapsburg restoration would not be tolerated by the European Powers. In August 1921 the Serbians evacuated Baranya, which they had occupied since the Armistice. Immediately afterwards Hungary should have handed over the *Burgenland* to Austria, but was prevented from so doing by a band of Hungarian irregulars, who prevented the entrance of the Austrian authorities. The Austrians declined to use force, and the questions at issue have been referred to the mediation of Italy.

All religions are tolerated; the greater number of Magyars are Roman Catholics, but there is a large Protestant minority. The parcelling out of the great estates, which was forcibly attempted during the Károlyi régime, has been continued to a small extent, but on an economic basis and at the initiative of the owners; a land-reform bill aiming at the forced sale of the properties exceeding a given area has been passed.

A single chamber National Assembly (introduced Jan. 4, 1920, in place of the Upper and Lower Houses of the former Parliament) is elected by universal suffrage. The question of providing a Second Chamber from a reformed House of Magnates (which ceased to function after the revolution) is under discussion.

The greater part of the area of present Hungary consists of the Alföld or Great Plain, parts of which may be considered as among the most fertile for agricultural purposes in the world, producing grain of excellent quality and supporting a number of horses, cattle and swine. The mountainous districts having been ceded to surrounding states by the Peace Treaty, Hungary has lost the greater part of the forests and mines, which formerly contributed so largely to the national wealth.

Prior to the war Hungary imported merchandise to the value of approximately £85,000,000, and exported approximately £75,000,000 annually; in the year 1916 the imports amounted to about K. 3,220,000,000 and the exports to about K. 2,650,000,000. Taking an average exchange equivalent, based on Zurich quotation for the year 1916, these amounts may be taken as

£80,500,000 and £66,250,000 respectively. There is a British-Hungarian Chamber of Commerce at Budapest, and there are openings for trade in chemicals, machinery, hardware, small tools, iron mill products, leather, and textiles. Hungarian (or German) is the language in which business letters should be written.

No part of Hungary touches the sea. The length of navigable rivers is 687 miles; there are about 5,000 miles of railways and 5,800 miles of telegraph in the present Kingdom.

The pre-war revenue of Hungary was about 2,250 million *Korona* (£93,750,000), whereas the estimated revenue according to the Budget for the year 1921-2 amounts to 20,296,000,000 *Korona* (£17,000,000). The public debt stood at 6,000,000,000 *Korona* (£250,000,000), and its present amount may be estimated at about 800,000,000,000 *Korona*, but this is dependent on exchange conditions and subject to decisions that may be given by the Reparations Commission, which has not yet begun to sit in Budapest.

CAPITAL: Budapest, on the Danube, has a population of 926,000 (1920). The other large towns are: Szeged (110,000), and Debreczen (103,000); there are 34 other towns with a population over 20,000.

The value of the *Korona* has fluctuated during 1921 between K. 750 and K. 3,000 per £1 sterling; it averaged K. 1,300 for the year 1920-21.

BRITISH LEGATION, Budapest.

British Envoy Extraordinary, Minister Plenipotentiary and Consul-General, Thomas Beaumont Hohler, C.B., C.M.G. (1921).....£4,000 and Sec., John Balfour.

3rd Secretary, D. J. Cowan, O.B.E., M.C.
Commercial Secretary, R. J. E. Humphreys.
Archivist, F. G. Redward.

BRITISH CONSULATE.

Budapest—Vice-Consul, B. P. Sullivan.

FLAG: Red, white, green.

Budapest is distant 1,126 miles from London; transit, 2½ days.

ICELAND.

(Island.)

King, Christian X. (see Denmark).

Presidents of *Al-thing*, G. Björnson; Benedikt Sveinsson; Magnus Kristjánsson.

Iceland is a large, volcanic, and treeless island in the North Atlantic Ocean, extending from 63° 23' to 66° 33' N. lat., and from 13° 22' to 24° 35' W. long., with an estimated area of 40,497 square miles, or greater than that of Ireland. The population was estimated in 1918 at 92,000.

An Act for the creation of a Danish-Icelandic Federal Constitution, Denmark and Iceland to be free and independent States under the same Sovereign, came into force on Dec. 1, 1918, but since the constitution granted in 1915 the assembly (*Al-thing*) had been more or less independent of the Government at Copenhagen in internal questions. The principal products of the island are sheep, cattle, ponies, and fish, and the imports consist of almost all the necessities of life, the chief items being grain and meal, sugar, coffee, salt, cotton goods, tobacco, spirits, hardware, and timber. Total imports (1919): estimated, £2,979,000; exports, £3,571,947. Iceland is in direct telegraphic communication with Great Britain.

CAPITAL, Reykjavik. Population, about 18,000.

Other towns are Isafjörður, Akureyri, and Seyðisfjörður.

FLAG: Blue, with white-bordered red cross.

Public Works, Signor Carnazza.

Agriculture, Signor de Capitani.

Industry and Commerce, Signor Rossi.

Labour, Signor Cavazzoni.

Posts and Telegraphs, Signor Colonna di Cesaro.

Liberated Territories, Signor Giuriati.

Ambassador in London, His Excellency Marchese
 della Torretta, 20 Grosvenor Square, W. 1.
 (Nov. 1922).

Counsellor, Signor Gabriele Preziosi.

1st Secretary, Signor Francesco M. Taliani, C.B.E.

2nd Secretary, Signor Giovanni Balsano.

3rd Secretary, Signor Mario Porta.

Military Attaché, Col. Virgilio Riggi, C.M.G.

Naval Attaché, Capt. Luigi Bianchi.

Air Attaché, Maj. Nobili Carlo M. Graziani, M.C.

Commercial Attaché, Signor Francesco Giannini.

Chanceller, Signor Giuseppe de Grossi.

Archivist, Signor Ugo Cantù.

Consul, Marchese Faa di Bruno, 44 Finsbury Sq.,

Vice-Consul, Cavaliere P. Righetti. [E.C. 2.]

A Kingdom in the South of Europe, consisting
 of a peninsula, the large islands of Sicily and
 Sardinia, the island of Elba, and about 70 minor
 islands (with certain dependencies hereinafter
 noted). It is bounded on the N. by the Republics of
 Switzerland, Germany, and Austria, on the S. by
 the Mediterranean, on the E. by the Adriatic and
 by the League of Nations territory of Fiume,
 Istria, &c., and on the W. by France and the
 Ligurian and Tyrrhenian Seas. The total area of
 the kingdom of Italy in 1914 was 110,623 sq. miles,
 and by the *Treaty of Versailles* (June 28, 1919)
 Italy gained from Austria-Hungary the Trentino
 (about 4,000 sq. miles) and Trieste (with about
 1,000 sq. miles of the Adriatic Sea-board). The
 Vilayet of Konia (40,000 sq. miles, pop. 1,000,000)
 is within the Italian sphere of influence.

The total area of the Kingdom of Italy was

* Signor Mussolini is the accredited leader of *Fascism*,
 the *Fascisti* (or *Fascisti*) representing a revolutionary
 movement against the alleged inactivity of post-War
 Italian statesmen. The emblem of the movement is a
 black shirt.

estimated (Jan. 1920) at 120,450 square miles,
 with a population of about 38,500,000. There is
 a large settled and floating population of Ameri-
 cans and English.

The Italian peninsula is traversed throughout
 its length by the chain of the Apennines; the
 Alps form its northern limits, dividing it from
 France, Switzerland, Germany, Austria and Yugo-
 Slavia. *Mont Blanc* (15,782 feet), the highest
 peak of the Alps, is in the French Pennine Alps,
 but within the Italian borders are Monte Rosa
 (15,217 feet) and several peaks from 12,000 to
 14,000 feet. The chief rivers are the Po, the
 Adige, the Tiber, and the Arno.

GOVERNMENT.—Italian unity was accom-
 plished under the House of Savoy, after an
 heroic struggle from 1848-1870, in which the
 great patriots Mazzini (born 1805, died 1872) and
 Garibaldi (born 1807, died 1882) were the
 principal figures. It was completed when Lom-
 bardy was ceded by Austria in 1860 and Venice
 in 1866, and through the evacuation of the
 Papal States by the French in 1870. In 1872 the
 King of Italy entered Rome, and that city was
 declared to be the capital. The government is
 that of a constitutional monarchy with a
 legislature of two houses: the *Senate* (of 385
 life members appointed by the King), and the
Chamber of Deputies of 510 members (elected by
 adult manhood suffrage). The maximum dura-
 tion of Parliament is 5 years; Deputies receive
 15,000 lire annually.

PRODUCTION.—Agriculture (including the
 growing of grapes, olives and chestnuts) is the
 principal industry. Italian wines are numerous
 and celebrated, and olives and olive-oil are fur-
 nished by Tuscany, Liguria, and the province of
 Bari; while fruit abounds and is largely ex-
 ported. The cultivation of the silkworm forms
 an important industry. Among the principal
 minerals are iron, lead, zinc, copper, manganese,
 and antimony ores, sulphur, gypsum, amianthus,
 alum, and boracic acid. Silver is found in Sardinia,
 and some gold in the Alps. Salt is a Govern-
 ment monopoly. In 1919 the produce of the
 vines amounted to 770,460,000 gallons, and that
 of the olive crop (1919) to 25,115,000 gallons.
 The principal exports are olive-oil, wine, candied
 citron, slenna earths, pastes, coral, eggs, boracic
 acid, raw and thrown silk, hemp, cattle, straw
 hats, rice, iron, zinc and copper ores, sulphur,
 marble, fruit, vegetables, fresh and prepared
 meats, poultry, chemical products, woods, roots,
 &c., for dyeing and tanning, artistic works, &c.
 The imports chiefly consist of cotton, wheat,
 coal, coke, chemicals, colonial produce, yarns,
 jute and manufactured goods, woollens, raw
 silk, silkworms' eggs and cocoons, machi-
 nery, iron and steel in bars, plates and rails,
 hardware, raw hides, horses and cows, fixed oils,
 salt fish, dye-stuffs, tobacco, earthenware, &c.
 The manufactures are woollen, cotton, silk,
 hemp, and linen yarns and tissues, leathers,
 straw and felt hats, furniture, chemical pro-
 ducts, paper, agricultural and other machinery,
 prepared meats, artistic works (such as mosaics,
 pottery, Venetian glass, alabaster ornaments),
 &c. Sugar is extracted from beet in large
 quantities for home consumption.

DEFENCE.—The Army consists on a peace
 footing of 310,000 all ranks. On May 23, 1915,
 Italy declared war on Austria-Hungary, and on
 Aug. 27, 1916, a state of war was declared to
 exist with Germany. The cost of the war to
 Oct. 31, 1918, amounted to 48 milliards of lire.

(£1,920,000,000). During the War of 1914-1918, over 15 per cent. of the population were mobilised, and 5,250,000 men passed into the Armies of Italy. The killed and missing amounted to 650,000. The Navy includes 5 modern and 6 pre-Dreadnought battleships, 5 armoured cruisers, 30 destroyers, 100 torpedo boats, and 80 submarines. The peace personnel of the Italian Navy is about 40,000 all ranks. Spezia and Pola, the chief naval and military ports of the kingdom, are securely fortified.

EDUCATION.—Primary Education is free and compulsory, and evening continuation classes are also compulsory for military recruits. It is maintained by local taxation and State grants. Secondary education is generally State-maintained, and schools are increasing in number. Several of the Universities are of very ancient foundation.

COMMUNICATIONS.—In 1919 there were 12,800 miles of railway open for traffic; the post-offices numbered 11,314, and there were 35,328 miles of telegraph line. The sea-going commercial marine (1917) consisted of 844 steamers (811,660 tons) and 4,464 sailing vessels (261,769 tons). In 1917, 78,101 Italian and 2,257 foreign vessels (total tonnage 15,882,877) entered and 70,016 Italian and 2,260 foreign vessels (15,895,984 tons) cleared at Italian ports. It is proposed to construct a harbour at Ostia, at the mouth of the Tiber, which will convert Rome into a seaport; improvements in the water connexion to Milan are also being taken in hand.

	1919-20.	1922-23.
Budget Revenue	£8,955,000,000	17,602,000,000

ITALIAN COLONIES, &C.

Colony.	Area.	Population.
Libia.....	810,000	1,000,000
Eritrea.....	64,000	380,000
Somaliland.....	193,000	300,000
Tientsin.....	20	10,000
Konia.....	40,000	1,000,000
Total.....	1,107,020	2,690,000

Libia.—The Turkish vilayet of Tripoli and the mutessarifat of Benghazi on the northern coast of Africa, were occupied by Italy in 1911-12, and under the Treaty of Ouchy (Oct. 1912) the sovereignty of the province was transferred to the King of Italy, the spiritual headship over the Muhammadan population being retained by the Sultan. Tripoli is the most easterly of the Barbary States, extending from the frontiers of Tunis to those of Egypt, a distance along the coast-line of nearly 1,100 miles, and inland to the south a distance of about 800 miles. The transferred territory comprises the four sub-provinces or Mutesarifiat of Tripoli, Khoms, Jabel-el-Gharb, and Fezzan, and also of Benghazi or Cyrenaica, a total area of 810,000 square miles, with a population of about 1,000,000. There are no rivers in the country, and the rainfall being precarious, a good harvest can only be reckoned on every four or five years. Barley, dates, olives, oranges, lemons, and vegetables are produced, and the principal imports are metals, British and other European manufactures, tea, beads, wine and spirits, besides a number of articles for barter in Wadai, Bornu, and the Western Sudan, whither caravans proceed from Tripoli. The principal articles of exports are ostrich feathers, ivory, skins, sponges, hides, esparto grass, wool, cattle, and horses. The ancient ruins in Cyrenaica, i.e., at Cyrene, Ptolemais, and Apollonia, are interesting to explorers, as well as those at Leptis Magna, which is close to Khoms, or 70 miles from the city of Tripoli. The population of Benghazi consists of Arabs, Greeks, Maltese, and a few Levantines. The commerce in cereals, wool, cattle for Malta, and other agricultural produce, is considerable, when a sufficient rainfall causes good harvests. The capital of "Tripolitana" is Tripoli (population 50,000), and of Cyrenaica, Benghazi (population 35,000).

Governor of Cyrenaica, Senator G. de Martino.

Governor of Tripolitana, L. Mercatelli.

Eritrea is a Red Sea colony, and extends from Ras Kasar, 18° 2' N., to Ras Demoir, 10° 42' N.,

and is bounded on N.W. by the Anglo-Egyptian Sudan, on S. by Abyssinia, and on S.E. by French Somaliland. It consists of a triangular portion of barren and sandy lowland with a coast-line along the Red Sea of about 700 miles, and covers a total area of 64,000 square miles, with a population of about 380,000, of whom about 3,000 are Europeans. The capital is Asmara, Massowa being the chief port, where there is a good harbour. The principal products are potash, skins, and salt, of great value being the monetary currency of Southern Abyssinia.

Governor of Eritrea, Admiral G. Cerrina.

Somaliland.—Italian Somaliland comprises a coastal strip on the Gulf of Aden and the Indian Ocean, from 11° N. lat. to the Equator, and is bounded on the N. by the Gulf of Aden, on E. by the Indian Ocean, and on W. by British Somaliland, Abyssinia, and British E. Africa. French and British Somaliland lie between Eritrea and Italian Somaliland. The total area is about 193,000 sq. miles, and the population is estimated at 300,000. Agriculture and camel and cattle rearing are the principal industries. The capital is Mogadisho, on the Indian Ocean.

Governor, C. Riveri.

Tientsin.—Italy obtained in 1902 a concession of land fronting the Peiho river (China), with a total area of 20 square miles and a population of about 10,000 natives.

Konia.—Under the Treaty of Sévres Italy received from Turkey the right to occupy the Asia Minor district of Konia (40,000 square miles) of which, however, the suzerainty remains vested in the Sultan.

JAPAN.

(Nippon.)

Emperor, Yoshihito, K.G.; born Aug. 31, 1879; succeeded July 30, 1912; accession ceremony, Nov. 10, 1915; mar. Princess Sadako, May 10, 1900, and has issue 4 sons.

Heir Apparent and Regent, Prince Hirohito, G.C.B., G.C.V.O., born April 29, 1901; married (1922) Princess Nagaka, daughter of Prince Kuniyoshi; (appointed Regent, Nov. 25, 1921).

CABINET (June 12, 1922).

Prime Minister and Minister of Marine, Admiral Baron Tomosaburo Kato.

Minister for Home Affairs, Rentaro Mizuno.

Minister of Foreign Affairs, Count Yasuya Uchida.

Minister of Finance, Otohiko Ichiku.

War, Gen. Hanzo Yamanashi.

Justice, Keijiyo Okano.

Education, Eikichi Kamada.

Consul (Liverpool), Saizo Mashiko.

" (Glasgow), A. Scott Younger.

" (Middlesbrough), Wayman Dixon.

" (Cardiff), E. H. Trimby.

This ancient and extensive Empire consists of four large and many small islands, said to comprise in all above 4,223, the principal of which are Honshu, Shikoku, Kiu-shū, Hokkaidō or Yezo, situate to the north of the main island, from which it is separated by the Tsugaru Straits, and Formosa, called by the Japanese, Taiwan. The Ainu, an uncivilised but harmless tribe, who in ancient times occupied the greater part of the country, are still found in Yezo. The Kurile Islands have belonged to Japan since 1875, and in 1876 she incorporated the Luchu (Riu-kiu) Islands under the name of "Prefecture of Okinawa." The empire, with its dependencies, comprises an area of 235,886 square miles, with a population (Oct. 1920) of 77,005,510. The islands are eminently volcanic, and 18 of the summits are still active; the chief of these, Fuji-san, or Fujino-yama, the loftiest and most sacred mountain of Japan, about sixty miles from Tokio, is 12,370 ft. high, and has been dormant since 1707. Japan is also liable to frequent, and occasionally disastrous, earthquakes. The country is very mountainous, and not more than one-sixth of its area is available for cultivation. It possesses numerous fine harbours. The soil is productive, teeming with every variety of agricultural produce. Copper, iron, sulphur, lead, manganese, tin, tungsten, molybdenum, antimony, zinc, agate, cornelian, and rock crystal are found. Gold is found in the island of Sado, and silver mining is prosecuted on a small scale; while there is a good supply of middling coal. Petroleum is also being produced in quantities, especially in the Province of Echigo. Among the vegetable productions may be noted the camphor-tree, paper mulberry, vegetable wax-tree, and a lacquer-tree, which furnishes the celebrated "lacquer" of Japan. The principal timber trees are the *Cryptomeria japonica*, *Pinus Massoniana*, and *Zelkova Keaki*; the *Paulownia imperialis* is largely used for fancy boxes and works of art; the maple is merely for ornament. Chestnut, oak, beech, and elm are comparatively rare and little used. The tobacco-plant, tea-shrub, potato, rice, wheat and other cereals are all cultivated; rice is the staple food of the people, about 300,000,000 bushels being consumed annually (in 1921 the home grown crop amounted to 273,000,000 bushels). Agriculture, upon which the Japanese bestow great care, is their chief occupation. The coasts are extremely rich in fish. The floral kingdom is rich, beautiful, and varied, though scented flowers are comparatively few. Fruit, for the most part of inferior quality, is abundant; English fruits, such as apples, strawberries, pears, grapes, figs, and peaches are being produced.

Commerce and Industry.—The chief manufactures are silk and cotton, cotton yarn, matches, paper, glass, lacquer ware, porcelain and bronze, and shipbuilding is an important industry in the yards; the cotton-spinning factories increased from 152 in 1913 to 199 in 1920. The chief imports are raw cotton from India, U.S., Egypt, and China; flour from the U.S.; and piece goods, metals, manures, woollens, wool, drugs, rails, locomotives, and machinery from the U.S.A. and Europe. Sugar is largely imported from the Dutch East Indies, Philippine Islands and Formosa; indigo from Germany, British India and Dutch East Indies; kerosene oil from U.S. and the Dutch Indies; beans, peas, and pulse from China and Korea; and rice, principally from British India, French India, Korea, Siam, and China. The chief exports are silk, cotton fabrics, cotton yarns, refined sugar, knitted goods, copper, matches, coal, camphor, straw plait, porcelain, earthenware, and marine products.

Communications.—There were 8,196 miles of railroad open in Dec., 1920, in addition to 1,313 miles open in Korea, 1,221 miles in Formosa and 97 in Saghalien, while the South Manchurian Railway in China (686 miles) is under Japanese control. The mercantile marine consisted in 1921 of 2,957 steamers above 20 tons (777 of them over 1,000 tons), and 2,825 sailing vessels over 100 tons. The total tonnage entered and cleared at open ports in 1920 was 55,870,105 (24,527 vessels). The three great ports are Kobe, Yokohama and Osaka, the first named having a large transshipment trade, in addition to direct imports and exports. In 1920 there were 7,900 post offices dealing with 3,401,046,565 postal packets, and 33,179 miles of telegraph line carrying 76,688,703 messages outwards.

Defence.—Service in the Army is universal and compulsory between the ages of 20 and 40. The peace effective was reduced in 1922 to 212,731 all ranks. The war strength is: First line, field army, 539,922; second line, fully trained, about 1,250,000. The Navy includes 11 battleships (5 to be scrapped), 7 battle cruisers (3 to be scrapped), 26 coast defence (8 to be scrapped), 12 light cruisers, 95 destroyers, 20 torpedo boats and 31 submarines (July, 1922). Japan declared war against Germany on Aug. 23, 1914, and her fleet was active throughout the war, while her troops took part in the operations in Siberia.

Education is in the lower grades free and compulsory. High schools are State-aided, and prepare for a 3 years' course at the Universities, which is largely devoted to the study of European languages. There are high schools for girls, and the technical and special schools are well attended. There are six State Universities of Tokio (2), Kyoto, Tohoku (at Sendai), Hokkaido and Kiushu (at Fukuoka).

Formosa.—The island of Formosa (Taiwan) was ceded by China to Japan (June 2, 1895) in accordance with the Treaty of Peace. Its total area is 13,500 square miles, with 3,654,398 inhabitants (1920). Imports, Yen 60,366,731; exports, Yen 35,172,945, in 1920. The colony has been self-supporting since 1906. Estimated revenue and expenditure (1921-22), Yen 114,956,859.

CAPITAL, Taihoku. Population (1920), 162,782.

Saghalin (Karafuto).—The southern half of this island was ceded by Russia at the close of the Russo-Japanese war. The ceded territory has a total area of 9,824 sq. miles with a population (1920) of 88,747. The Japanese Government is encouraging the settlement of agriculturists, and there is a large fishing industry. Estimated revenue and expenditure (1921-22) Yen 14,045,806.

The **Kwantung Peninsula** (capital, Dairen, formerly Dalny), which had been leased to Russia by China, was similarly leased to Japan after the Russo-Japanese war. Area, 1,220 sq. miles; population, 667,383. Dairen provides Japan with a mainland port, ice free all the year round, and the peninsula is fertile. Imports (1920), Yen 81,211,303; exports, Yen 115,030,780. Estimated revenue, Yen 15,947,658 (1921-22).

CAPITAL, Dairen. Population (1920), 238,715.

The **Pescadores** (Bokoto) consists of about 63 islands, with a total area of 85 square miles, and a population of (1920) of 56,712.

Korea (Cho-sen).—By a treaty of Aug. 23, 1910, Korea was annexed to Japan and became part of the Japanese Empire.

Korea is situated between 122° and 128° E. long., and between 34° and 43° N. lat., and the coast is fringed with innumerable islands, of which the largest is Quelpart. Total length, 600 miles from north to south, and greatest breadth 135 miles from east to west, with an area of about 85,156 square miles. Population estimated at 17,288,989 (Dec. 1920); there are about 347,850 (Dec. 1920) Japanese in the country. The soil is fertile, but mountainous except in the river valleys. About 10,588,985 acres are under cultivation, the staple agricultural products being rice and other cereals, beans, cotton, tobacco, and hemp; the other natural products are chiefly gold and hides. Ginseng, a medicinal root much affected by the Chinese, is largely grown under Government supervision in the province of Pyeng-An, and, being a Government monopoly, forms a rich source of revenue. Gold, copper, coal, iron, and other minerals are distributed throughout the country. The principal exports are beans, rice, livestock, cowhides, ginseng, wheat, barley, iron ores, and raw cotton. Manufactures are as yet in a primitive condition, the principal being hemp cloth, brass ware, and an excellent quality of paper resembling the Japanese article, but stouter. The greater part of the sea-borne trade is carried in Japanese bottoms. Considerable progress is being made in the direction of the proper lighting of the coast. The total railway mileage open to traffic

is 1,379 miles. Estimated revenue, Yen 157,356,717, and expenditure (1921-22), Yen 157,342,289.

Imports into Korea, 1920 Yen 249,286,544

Exports from Korea, 1920 " 197,020,094

Pacific Islands.—Under the Treaty of Versailles, 1919, Germany renounced the sovereignty of all her over-sea possessions, and the German Pacific Islands N. of the Equator have been allocated to Japan. These islands, in Micronesia, are the Pelew, Caroline, Marshall and Ladrone groups, with a total area of about 800 sq. miles, and a population of 48,505 natives and 3,671 Japanese (1920).

Shantung.—The German possessions in the Shantung Peninsula of China (Kiao-Chao, &c.), were allocated to Japan, and their restoration to China is under consideration.

CAPITAL OF THE JAPANESE EMPIRE, Tòkiô, formerly called Yedo, the residence of the Emperor; population (Oct., 1920), 2,173,162. Other cities are—Osaka, 1,252,972; Kioto, the ancient capital, 591,305; Nagoya, 429,990; Kobé, 608,628; Yokohama, 422,942; Hiroshima, 160,504; Nagasaki, 176,554; Hakodate, 144,740; Kanazawa, 129,320; Kure, 130,354.

FLAG: White, charged with rising sun (red).

KHIVA.

(Khorezm.)

The National Soviet Republic of Khorezm, formerly the Khanate of Khiva, lies between Bokhara, Turkestan and the Kirghiz Republic,

* The local exchange value of the yen is taken at 22. old. for the purposes of conversion, but in July, 1922, its value was 28. 1 15/16d.

and has a total area of about 26,000 square miles, with a population of 800,000, of whom about half are nomads. The country occupies the fertile delta of the Oxus and is highly productive. The capital (Khiva) has about 10,000 inhabitants. The independence of the Republic has been recognised by treaty with Soviet Russia (Sept. 30, 1920).

KURDISTAN.

Kurdistan is a mountainous district of Eastern Asia Minor, between Armenia (N.), Syria and Mesopotamia (S.), Persia (E.), and Turkish Anatolia (W.). The Kurds are a semi-nomadic tribe inhabiting the mountainous regions of Turkish Asia Minor and of N.W. Persia. They are believed to be the Karduchi of Xenophon's *Anabasis*, and for centuries they lived in quasi-independence, punctuated by raids and subsequent punitive expeditions. In 1920 the autonomy of Kurdistan was recognised by Turkey and Persia, and by the Supreme Council of the Allied Powers.

The area of the country is estimated at 65,000 to 70,000 square miles, with a population of 2 to 3 millions. The chief centres are Diarbekr, Bitlis, Van (to the east of Lake Van) in the former Turkish dominions, and Urmia (to the west of Lake Urmia) and Kermanshah, in the Persian dominions. *Lake Van* (2,000 sq. miles in extent) occupies the central portion of the former Vilayet of Van; *Lake Urmia* (1,600 sq. miles in extent), across the Persian border, is about 4,000 feet above sea level, and its waters are so salt that fish cannot live therein.

The climate is severe, with a short hot summer and long and severe winter; but cereals, vines and fruit are abundantly cultivated on the slopes of the mountains; rice is grown in the hot, well-watered plains, while the rich pasture-lands of the slopes and valleys support large herds of horses, mules and sheep. The mineral wealth of the country is almost entirely undeveloped, but it is believed to be very great, and there are numerous hot and cold mineral springs; salt is obtained in large quantities in the neighbourhood of Lake Van.

The Kurds are Muhammadans and fierce persecutors of the Christians in their districts and in the neighbouring territory of Armenia.

LATVIA.

(Republika Latvija.)

President, Jānis Tschakste.

Premier and Foreign Affairs, Z. A. Meierovics.

Minister in London, G. W. Bisseneek, 24 Gledhow Gardens, South Kensington, S.W. 5.

Sec. of Legation, J. Gilbert.

Consul-General, E. Bihrsch, 329, High Holborn, W.C. 1.

A Baltic Republic in the basin of the Dvina river and round the Gulf of Riga, includes the former Russian Provincial government of Courland, and parts of Livonia and Latgale, the area being about 28,000 sq. miles, with a population of about 2,750,000.

The surface of the country is generally flat with marshy areas, interspersed with over 1,000 lakes, of which the largest is Lake Peipus. Agriculture and dairy farming are the principal occupations of the people, and there are many flourishing industries. The fisheries are also of importance.

The seat of government is Riga, at the mouth of the Dvina river, with an estimated population of 570,000, other centres being Libau (200,000) and Windau (50,000) on the Baltic coast, and Mitau (50,000) and Dwinsk (90,000) near the Southern (Lithuanian) frontier.

The legislature consists of a single Chamber Assembly of 150 members, elected by universal adult suffrage, and the President of the Assembly is President of the Republic. The executive is entrusted to a Council of Ministers.

CAPITAL, Riga.

FLAG: Red, white, red, with sun's rays above the letter "L" and three stars.

Commercial Attaché and Consul, J. T. Grein, 27 Mincing Lane, E.C. 3.

Vice-Consul, A. E. Donaldson.

An independent Negro Republic of Western Africa, occupying that part of the coast of North Guinea which is between the rivers Cavalla, S.E., and Mano, N.W., a distance of about 350 miles, with an area of about 48,000 square miles, and extending to the interior to latitude 8° 50', a distance of 150 miles from the seaboard. It was founded by the American Colonization Society in 1820, and has been recognised since 1847 as an independent State. The population is estimated at 1,500,000 to 2,000,000, including about 12,000 Americo-Liberians. The principal exports are palm-kernels, piassava, palm-oil, coffee, cocoa, ivory and kola nuts. The chief imports are rice, tobacco, Manchester goods, provisions, spirits, salt, hardware, glass and earthenware and building materials. The executive power is vested in a President elected for four years, assisted by a ministry; there are two houses of Legislature, the Senate, with eight members elected for six years, and the House of Representatives with fifteen members elected for four years. There is no regular army, but there is

an enlisted frontier force of about 600 men under native officers. The control of the customs is in the hands of a General Receiver (who is also Financial Adviser) lent by the Government of the U.S.A. There are 10 ports of entry along the 350 miles of coast and 12 interior ports. In 1921, 263 vessels (622,668 net tons) entered and cleared at Monrovia; of these 82 (249,228 net tons) were British.

LITHUANIA.

(Lietuva.)

President, A. Stulginskis (May 15, 1920).

Premier and Foreign Affairs, Dr. Ernest Gal-
vanauskas.

Minister in London, Thomas Naroushevitch, 10
Palace Gate, W. 8.

The former Russian Governments of Kovno and Vilna and portions of Grodno, Moghilev and Vitebsk were united in 1918 as the *Republic of Lithuania* (Lietuva). The Republic is bounded on the N. by Latvia, on the S. by the German district of Königsberg, Poland and Soviet Russia, on the E. by Soviet Russia, and on the W. by the Baltic Sea; the total area included in the Republic being about 40,000 sq. miles, with an estimated population of 5,000,000. The future of the districts of Memel and Tilsit is to be settled by the League of Nations, as between Lithuania and its S. neighbour, Poland.

The legislature consists of a single chamber Assembly of 112 members, elected by universal adult suffrage, the Executive being entrusted to a council of ministers. The seat of government is Vilna, on the Viliya river, a tributary of the Niemen (pop. 210,000) connected by railway with Riga (Latvia), Petrograd, and Warsaw (Poland); Kovno, on the Niemen, has a popula-

tion of 95,000, other centres being Grodno (60,000), Memel, on the Baltic (35,000), Suvalki (30,000), and Shavli (30,000).

CAPITAL, Vilna.

(Grand-Duché de Luxembourg.)

Grand Duchess, H.R.H. Charlotte, born Jan. 23,
1896, succeeded (on the abdication of her sister)
Jan. 9, 1919; married, Nov. 6, 1919, Prince
Felix of Bourbon-Parma. *Heir Apparent*,
Prince Jean, born Jan. 5, 1921.

Minister of State, M. Reuter.

Chargé d'Affaires, M. A. B. Pescatore.

Consulate-General in London, 37 Bedford Square,
W.C. 1.

A Grand Duchy in Central Europe, bounded by Germany, Belgium, and France; it formed part of the Germanic Confederation; 1815-66, and was included in the German "Zollverein." In 1867 the Treaty of London declared it a neutral territory under the sovereignty of the King of the Netherlands, on whose decease, 23 Nov., 1890, it passed to the Duke of Nassau. The territory was invaded and overrun by the Germans at the commencement of the war in 1914, but was liberated in 1918, U.S. troops entering the capital on Nov. 22. By the *Treaty of Versailles*, 1919, the country is declared to be free from all ties with Germany. The area is 999 square miles; the population (1916) 263,824, nearly all Roman Catholics. The principality is rich in iron-ore. The revenue in 1921 was estimated at 63,808,926 francs, expenditure 149,773,345 francs; debt (1 Jan., 1921) 128,000,000 francs. There are 328 miles of railway. The army numbers about 300 men. The capital, Luxemburg (population 45,676), is a dismantled fortress.

FLAG: Red, white, blue.

British Envoy, Rt. Hon. Sir G. D. Grahame,
G.C.V.O., K.C.M.G. (1922).

Consul-General, M. C. Gurney, C.M.G., M.V.O.

Consul, N. le Gallais.

MEMEL.

Under the *Treaty of Versailles* Germany renounced the sovereignty over the town and territory of Memel, and the Allied Powers entrusted the government to a commission. The total area administered is 945 square miles, with a population of about 150,000, of whom about 42,000 inhabit the town of Memel.
British Vice-Consul, Memel, Reginald Le May.

ralias, 25, Craven Road, W. 2.

Liverpool—Consul, Señor Don Rafael Aveyleyra,
51 South John Street.

Glasgow—Consul, Señor Don Filiberto Valero,
30, Hill Street.

Mexico occupies the southern part of the continent of North America, with an extensive seaboard to both the Atlantic and Pacific Oceans, extending from 15° to 32° 30' N. lat. and 87° to 117° W. long., and comprising one of the richest and most varied zones in the world. It comprises 27 states, 3 territories, and the federal district of Mexico, making in all 31 political divisions, comprehending an area of 768,883 square miles with a population of (1910) 15,063,207.

The two great ranges of North America, the Sierra Nevada and Rocky Mountains, are prolonged from the north to a convergence towards the narrowing Isthmus of Tehantepec, their course being parallel with the west and east coasts. The surface of the interior consists of an elevated plateau between the two ranges, with steep slopes both to the Pacific and Atlantic (Gulf of Mexico). In the west is the Peninsula of California, with a mountainous surface, separated from the mainland by the Gulf of California. The Sierra Nevada, known in Mexico as the *Sierra Madre*, terminates in a transverse series of volcanic peaks, from Colima on the west to Citlaltepete on the east, the intermediate and highest peaks being Ixtaccihuatl (17,879 feet) and Popocatepetl (19,784 feet). The low-lying lands of the coasts form the *Tierra Caliente*, or tropical regions (below 3,000 feet), the higher levels form the *Tierra Templada*, or temperate region (from 3,000 to 5,000 feet), and the summit of the plateau with its peaks is known as *Tierra Fria*, or cold region (above 5,000 feet). The only considerable rivers are the *Rio Grande del Norte*, which forms part of the northern boundary, and is navigable for about 70 miles from its mouth in the Gulf of Mexico, and the *Rio Grande de Santiago*, which runs from Lake Chapala to the Pacific. The remaining streams are governed by the formation of the land, and run in mountain torrents between deep-cut cañons or "barrancas." The largest fresh-water lakes are *Chapala*, some 50 miles in length, and *Patzcuaro* and *Xochimilco*. In the north-west are saline lakes amid bare and dry regions. The climate varies according to the altitude. Yellow fever sometimes occurs at Merida, Yucatan.

The earliest invaders, or *Toltecs*, gave place in the 13th century to the *Aztecs*, who were conquered in the 16th century by Spanish adventurers under *Hernan Cortes*.^{*} Spanish rule was established at *Tenochtitlan*, a 14th century Aztec city (now Mexico), and Mexico remained a Spanish dominion until its freedom was asserted by a revolutionary war, 1810-1827. From 1837-1848 the province of Texas gave rise to hostilities with the United States, terminating in a three years' war and a cession of the disputed territory to the victorious northern States. In 1848 a Republic was proclaimed, but Iturbide declared himself Emperor in 1821. He was shot in 1824, and a Republic was again established. In 1862 the French troops came to Mexico, and in 1864 an Empire under Ferdinand Maximilian of Austria was declared. In 1867 the downfall of the Empire

and the death of the Emperor gave rise to the new Republic, which has endured to the present day. The most prominent of modern Presidents is *Porfirio Diaz*, who ruled (except during 1880-4) from 1876 to May 25, 1911. Since the fall of Diaz internal disturbances, in which eleven Presidents have figured, have continued with varying degrees of intensity, and considerable friction (amounting almost to a state of war) has arisen with the United States. On July 15, 1914, Venustiano Carranza assumed control of the executive, but his anti-foreign attitude and legislation, together with the seizure of many properties (a few of which belonged to British subjects) led to a refusal of the British Government to grant recognition of his administration. The degree to which Carranza departed from his declaration of neutrality during the Great War undoubtedly influenced the British Government when this policy was adopted. Carranza was overthrown by a further revolution in 1920, and is believed to have been shot by the insurgents. After the fall of Carranza the executive power was assumed by de la Huerta as provisional President, and on Dec. 1, 1920, General Obregon, whose *coup d'état* had caused the downfall of Carranza, became head of the Republic. The determination of the new government to uphold the Carranza constitution of 1917, which has led to confiscatory measures in connection with nationalization of the petroleum of the country, and contains (among other departures from the accepted comity of nations) provisions which restrict the rights of foreigners, has caused the British, American, French and Belgian governments to adopt a policy of non-recognition of the Obregon administration until foreign interests are treated with the respect customary among enlightened nations. The expropriation, without payment of compensation, of several hundreds of private properties, in pursuance of the Obregon agrarian policy, has called forth strong protests from foreign Powers.

Acapulco, Manzanillo, Mazatlan, Salina Cruz, and Guaymas are the chief ports on the Pacific; and Vera Cruz, Tampico, Progreso, and Puerto Mexico on the Atlantic or Gulf of Mexico. There were 15,804 miles of railroad open on Sept. 16, 1912, and 40,687 miles of telegraph. The railroads have in a large measure been built by American and English companies.

The principal agricultural crops are maize, wheat, barley, Chile-pepper, sugar, coffee, cotton, tobacco, vanilla, flax, grapes, and all kinds of tropical fruit. The maguey, or Mexican aloe, yields a favourite beverage, "pulque"; other species of the same plant supply pita-flax and sisal-hemp (henequen). The forests abound in mahogany, rosewood, ebony, and caoutchouc trees. The mineral wealth is very great; silver and gold, copper, lead, and quicksilver, iron and coal, are the leading products of the mines. Woollen and cotton spinning and weaving, and other branches of industry, are encouraged by high protective duties. The imports, nevertheless, consist very largely of textile manufactures. Of the exports 45 per cent. consist of silver and gold; sisal hemp (henequen), coffee, hides and skins, timber, logwood, vanilla, tobacco, dyestuffs, sugar, and drugs ranking next in importance.

The monetary system has recently been placed on a gold basis, with a gold peso=50 cents U.S. currency. In Sept. 1922, the Mexican Government undertook to set aside for the

^{*} The remains of *Hernan Cortes* have been definitely located in the Temple of Jesus, Mexico City. They are contained in a marble vault, with the funeral garments,

service of the debt the sum of 30,000,000 gold pesos in 1923, rising by 5 million gold pesos annually to 50 million gold pesos in 1927. The total of the debt in Sept. 1922, was stated at 508,830,300 gold pesos (= \$254,415,150 U.S.) of which about one half was raised for railroad purposes.

The language of the country is Spanish.

MONACO.

(Principauté de Monaco.)

Sovereign Prince, Louis Honoré Charles Anthony, born July 12, 1870, acc. June 25, 1922.	
Heiress Apparent, Hereditary Princess Charlotte Louise Juliette (Duchess of Valentinois), born	

Sept. 30, 1898; mar. March 19, 1920, Prince Pierre of Monaco (Count de Polignac), and has issue, a daughter, Princess Antoinette, born Dec. 28, 1921.

Minister of State, Raymond Le Bourdon.

Consul-General in London, Paul Crémieu-Javal, 39 Ennismore Gardens, W. 1.

Consular Office, 37, Conduit Street, W. 1.

A miniature Principality on the Mediterranean, between France and Italy, consisting of the old town of Monaco, La Condamine, and Monte Carlo, where is the famous casino, and comprising a narrow strip of country extending from the Monaco Cemetery on the west to St. Roman on the east; it is about 3 miles long and 1½ miles broad, with (1913) 22,990 inhabitants, and a yearly average of over 1,500,000 visitors. The whole available ground is built over, so that there is no cultivation. There is a small harbour (24 ft. alongside quay) and the import duties are the same as in France. There is a local police force of 200 men.

CAPITAL, Monaco.

MOROCCO.

(Maghreb el akssa.)

French and Spanish Protectorate.

Sultan, Mulai Yusef, G.C.M.G., proclaimed Aug. 18, 1912.

Morocco, the largest of the Barbary States, is situate in the north-west of the African Continent, between 27°–36° N. lat. and 1°–12° 40' W. long, with a total area estimated at 314,000 square miles, and a population of about 7,000,000. Morocco is traversed from the Atlantic coast in the south-west to the Algerian frontier in the north-east by five parallel ranges, known generally as the *Atlas Mountains*. Between the various ranges lie well-watered and fertile plains, the lower slopes of the northern flanks of the mountains being well-wooded, while the southern slopes are exposed to the dry winds of the desert and are generally arid and desolate. The most northerly point of Morocco is the peninsular of Ceuta, which is separated from the Continent of Europe by the narrow strait of Gibraltar. The Jebel Musa dominates the promontory, and with the rocky eminence of Gibraltar was known to the ancients as *The Pillars of Hercules*, the western gateway of the Mediterranean. Between 32° N. and 30° N. is the headland Ghir, which encloses a bay containing the port of Agadir formerly known as the “Gate of the Sudan.” This port formed the bone of contention between France and Germany in 1911–1912.

The climate is generally good and undoubtedly healthy, especially on the Atlantic coast, the country being sheltered by the Atlas Mountains from the hot winds of the Sahara. The extremes of temperature in Tangier and Mogador are 92° Fahrenheit in the summer and 37° in the winter, with a rainy season from October to May. The Mediterranean coast is drier and less temperate, but not unhealthy, while the plains of the interior are intensely hot.

Government.—From the end of the 8th century A.D. until the year 1912 Morocco was

ruled by a despotic Amir or Sultan of various dynasties, that of Filali having reigned since 1649. The imperial umbrella (the symbol of sovereignty) was passed on by nomination, and the rule was arbitrary and unchecked by any civil limits. The country was subject to European intervention at many periods, and during the closing years of the nineteenth century the dominant power in the country was France, whose Algerian territory formed the eastern boundary. By the Anglo-French Convention of 1904 Great Britain had recognised the predominance of French rights, but in 1905 Germany exhibited an interest in Moroccan affairs, and at the *Algeciras Conference* in January, 1906, an attempt was made by the Powers to define the various interests, and to establish order in the country by means of an organised police force. Between 1906 and 1911 there were frequent conflicts between French troops and Moroccan tribesmen, and in 1908 internal dissensions led to the defeat and deposition of the Sultan Abd el Aziz IV. by his brother Hafid, who eventually triumphed and was recognised by the Powers in 1909. In 1912 Sultan Hafid abdicated and accepted a pension from France, and was succeeded by his brother Moulay Yusef.

France is the paramount power in Morocco, and the Government of the greater part of the country is administered by the French Republic, which is recognised as the "protecting power." In addition to France, the kingdom of Spain has had relations with Morocco for many centuries. *Ceuta*, in 35° 54' N. lat. and 5° 18' W. long., has been a Spanish possession since the close of the 16th century, and forms part of the administrative province of Cadiz, and there are several *presidios* along the Mediterranean (or Rif) coast, while the adjacent Alhucema and Zaffarin islands are Spanish possessions. A special international régime was designed for *Tangier* before the War by negotiations between the British, French and Spanish Governments, but the outbreak of the War prevented this régime from being put into operation. Pending further negotiations the town and zone are administered by the Sultan's representative and the diplomatic body. In the Spanish zone there have been tribal risings in 1921, and during the operations to quell these risings the Spanish Expeditionary force met with serious reverses in the neighbourhood of Melilla.

Among the agricultural products are wheat, barley, maize, beans, peas, birdseed, linseed, coriander, cummin, fenugreek, esparto, and hemp, and the northern slopes of the Atlas produce many fruits, principally figs, almonds, pomegranates, lemons, olives, oranges and dates, the latter growing also on the southern slopes and in the plains. The live stock includes large quantities of horses, cattle, sheep and goats, while the poultry and egg industry is of increasing importance. Antimony, iron, coal, copper, lead and tin (the last three in considerable quantities) are known to exist, and gold and silver are also found. Rock salt and brine are exported in large quantities. The trade of Morocco is chiefly with France and Algeria, Great Britain and Spain, the chief imports being cottons, sugar and soft goods, the exports being grain, eggs, hides and skins, and wool. The unit of currency in the French protectorate is the franc, while in the *Tangier* zones the franc, the Spanish and the *Hassani peseta* are

all current, and in the Spanish zone the two last of these currencies.

Communications.—The French have built some narrow gauge military railways from Casablanca to Rabat, to Kinitra and Mequinez, and to Settet, while the Franco-Spanish treaty provides for a line from Tangier to Fez. Telegraphic communication is established by submarine cables from Tangier to Cadiz, Tarifa and Oran, and there are wireless stations at Tangier, Rabat, Casablanca, and Mogador; inland lines have been built by the French to Fez and to some of the ports, as well as to the borders of the Spanish zone, and the latter line will shortly be extended to Tangier. Roads have also been constructed in the French zone, and it is now possible to go to Fez or Marrakesh by motor-car.

The principal *Harbours* are Tetuan, Tangier, El Arish, Rabat, Casablanca, Mazagan, Safi, Mehedia, and Mogador.

Director of the Chancery, H. N. Brouwer, 3 Atney Road, Putney, S. W. 15.

Naval Attaché, Capt. K. F. Sluys.

Commercial Attaché, F. B. s'J. Jacob.

Horticultural Adviser, B. Gerritzen.

Consul-Gen., J. A. Schuurman (acting), 28 Langham Street, W. 1.

Vice-Consul, J. A. Schrikker.

A maritime Kingdom of Central Europe, situate on the North Sea, in lat. $50^{\circ} 46' - 53^{\circ} 34'$ N. and long. $3^{\circ} 22' - 7^{\circ} 14'$ E., consisting of 11 provinces, and containing a total area of 12,761 square miles, with a population in August, 1922, of 7,029,881. The majority, about three-fifths, belong to the several Reformed Churches; and the remainder are Roman Catholics, with about 107,000 Jews. The land is generally flat and low, intersected by numerous canals and connecting rivers—in fact, a network of water courses. The principal rivers are the Rhine, Maas, and Yssel, with the mouths of the Schelde. The chief native products are herrings and other fish, cattle, horses, swine, sheep, poultry, eggs, seeds, potatoes, oats, rye, wheat, barley, beans, peas, buckwheat, beetroot, chicory, flax, hemp, tobacco, and dairy produce. The principal manufactures are shipping, bricks, margarine, cocoa, chocolate, linen, rich damasks, cottons, woollens, cigars and other manufactured tobacco, candles, confectionery, earthenware and pottery, glass bottles and ware, chemical and pharmaceutical products, matches, perfumery, sugar, bicycles and automobiles, boots and shoes, starch, potato flour, engines, metal substances, works of art in gold and silver, incandescent lamps, machinery, motors, paper, printing, oils, beer, "geneva" and other liqueurs. Diamond-cutting employs numerous hands in Amsterdam.

Communications.—The total extent of canals is about 2,000 miles. There were 2,117 miles of railroad open in 1918, and 5,249 miles of telegraph line. The mercantile marine, on Dec. 31, 1921, consisted of 688 steam and motor vessels and 32 motor schooners, tonnage 2,230,474. In 1921, 11,500 vessels (40,403,000 cubic metres) entered, and 11,600 vessels (40,348,000 cubic metres) cleared at the various ports. An Act for the damming and draining of the Zuyder Zee was passed in 1918.

Defence.—The Home Forces consist of a conscript army, with an annual levy of 21,500 men, producing a first-line army of 170,000, or

(including landsturm) 315,000 all ranks. The Royal Navy consisted, on July 1, 1921, of 100 ships (7 of them ironclads, and 6 protected cruisers).

Education.—Private State-aided primary instruction is encouraged rather than public, though the latter is provided if required, by local taxation. The average attendance at primary schools is 95 per cent. Secondary schools for working classes are numerous, well equipped and attended. The principal Universities are at Amsterdam, Groningen, Leiden, and Utrecht, and there are technical universities at Delft (polytechnic), Rotterdam (commercial), Wageningen (agriculture), and Utrecht (veterinary).

NETHERLANDS COLONIES.

TOTAL AREA, 832,473 square miles.

POPULATION, 47,203,639.

The possessions of the Kingdom of the Netherlands in the EAST INDIES (Administrative Capital *Batavia*, pop. about 140,000) are very considerable, comprising the whole of the SUNDIA ISLANDS and *MOLUCCAS*; *Sumatra* (area, 162,000 sq. miles), *Java* and *Madura* (51,000 sq. miles), *Netherlands Borneo* (115,000 sq. miles), *Celebes Island* (72,000 sq. miles), *Moluccas* (44,000 sq. miles), *Timor Islands* (18,000 sq. miles); with the exception of a portion of Borneo and Eastern Timor, together with WESTERN NEW GUINEA, with a total area of 738,000 square miles, and a population (1917) of 47,203,639, of whom as many as 34,157,000 live in the islands of Java and Madura. JAVA and MADURA (customs receipts, 1917, 17,274,995 florins) produce a sufficient supply of food for a dense population, besides furnishing sugar (26,744,550 piculs produced in 1921), tobacco, tea, coffee, tin, and other products for exportation. The "outlying" islands are frequently administered by their own princes, subject to the directions of a Netherlands Resident. There was (1919) a colonial army of 1,449 officers and 39,521 men. The colonial revenue for 1920 was about 669,800,000 guilders and the expenditure about 683,000,000 guilders. The exports, for private account, amounted in 1919, for Java, Madura, and the other outlying islands, to 2,162,246,000 florins, while the imports for the same year amounted to 679,832,000 florins.

In South America the colony of SURINAM, or Netherlands Guiana (imports, 1919, 8,996,144 guilders; exports, 7,987,870 guilders), embraces 49,845 square miles and contains (1919) 105,765 inhabitants; and in the West Indies, CURAÇAO (imports, 7,036,835 guilders; exports, 4,194,654 guilders; population, 34,021) and five other small islands belong to the Netherlands, having an area of 436 square miles, with a population of 21,628 (imports, 1,654,532 florins; exports, 876,456 florins).

NICARAGUA.

(República de Nicaragua.)

President (1920-1923), Diego Manuel Chamorro, assumed office, Jan. 1, 1920.
Foreign Affairs, Dr. Carlos Cuadra Pasos.

Chargé d'Affaires (London Legation), Eduardo Perez-Triana, 49 St. James's Street, S.W. 1.
Consul in London, Esteban M. Vargas, 65 Bishopsgate, E.C. 2.
Vice-Consul, Wyness B. Gauld.

The largest State of Central America, with a long seaboard on both the Atlantic and Pacific Oceans, situate between 9° 45'—15° N. lat. and 83° 40'—87° 38' W. long., containing an area of 51,660 English square miles and a population (census of 1920) of 638,119, of whom about three-quarters are mixed blood and the rest Indians, besides the Mosquitos, who are mostly in a primitive state.

Nicaragua was discovered by Columbus in 1502, and was overrun by the Spaniards under Davila in the first quarter of the 16th century, forming part of the Spanish Captaincy-General of Guatemala until 1821, when its independence was secured. The present constitution rests on the fundamental law of Nov. 20, 1911 (amended 1913) and is that of a centralised republic. The President is elected by direct suffrage for four years.

The chief products are coffee, bananas, rice, beans, sugar, cocoa, and tobacco; large quantities of foodstuffs are imported, in addition to cottons and other manufactures from the United States.

There are 146 miles of railway open, and 1,591 miles of telegraph. Corinto, on the Pacific coast, is the chief commercial port.

The official language of the country is Spanish.

Vice-Consul, C. Kruse Jensen.

Norway, an independent kingdom, founded in 872 (fundamental law of May 17, 1814), was united with Sweden under the same King from Nov. 4, 1814, to June 7, 1905, when the union was dissolved. The Parliament of 150 members is called the "Storting," which is divided into two sections, chosen by itself to discuss projected Bills, called "Odelsting" and "Lagting." Norway, the western and northern portion of the Scandinavian peninsula, is about 1,100 miles in length, its greatest width about 250 miles. It is divided into 20 provinces, or fylker, and comprises an area of 124,130 sq. miles with a population (1920) of 2,649,775. The coast-line is extensive, deeply indented with numerous fiords, and fringed with an immense number of rocky islands. The surface is mountainous, consisting of elevated and barren tablelands, separated by deep and narrow valleys. The cultivated area is about one-thirtieth part of the country; forests cover nearly one-fourth; the rest consists of highland pastures or uninhabitable mountains.

Agriculture, though pursued with some vigour of late, is unable to furnish sufficient produce for home consumption; hence it has been necessary to import considerable quantities of corn, meat, and pork. The fisheries give employment to a large part of the population throughout the year. The most important are cod and herring; the exports of these with other sea-products and fish-oil were valued at 163,244,000 kroner in 1921. The mineral products are increasing, the total value won in 1920 being 28,185,000 kroner. Timber-dressing, mechanical engineering, textile manufactures, ship-building, pulp-making, and electro-chemical products are the principal departments of Norwegian industry. The exports of produce of the forests were valued at 141,544,000 kroner in 1921. The imports consist chiefly of the necessary articles of consumption. The chief exports consist of timber, matches, fish, oil, and other products of the fisheries, pulp, paper, skins and furs, nails, minerals, stone, ice, calcium carbide, condensed milk, butter, margarine, tinned goods, saltpetre, &c. Norway voted for prohibition of alcoholic beverages in 1919 (385,000 for prohibition, 275,000 against).

Defence.—Service in the National Militia is universal and compulsory. The peace strength is 138,500 all ranks, and the war effective is about 420,000 of all ranks. In time of war all males between the ages of 15 and 55 are liable for service. The Navy consists of 4 ironclads, 29 torpedo-boats, 1 gunboat, 3 destroyers, 4 submarines, and 10 minelayers.

Education is compulsory and free between the ages of 7 and 14, schools being maintained by local taxation with State grants in aid. The attendance is high. Secondary schools are provided by the State, by local authorities, and privately. There are many special schools and industrial and technical institutes. The University of Christiania was attended in 1920 by 1,550 students.

Communications.—The total length of railways open in 1921 was 2,141 miles, of which 271 miles were private lines. The length of telegraphs and telephones belonging to the State in June, 1920, was 16,210 miles. The mercantile marine, Jan. 1, 1922, consisted of 3,840 vessels, of 1,638,700 net tons. During the War, Norwegian vessels of 1,237,200 tons were sunk by torpedo or mine, and 1180 (824 Norwegians) seamen were killed; in addition, 69 vessels of 60,800 tons and 943 seamen are "not accounted for," and are presumed to have been destroyed by torpedo or mine.

Minister in London (vacant).

Consul-General, Don Juan B. Chevalier, Cooper Building, Church Street, Liverpool.

Consul in London (and Chargé d'Affaires), Don C. R. Zachrisson V., 232 Finsbury Pavement House, E.C. 2.

Consul in Birmingham, S. Sauri.

Panama, formerly one of the nine Departments of Colombia, revolted in Nov. 1903, and established a separate Government. The area of the Republic is 31,890 square miles, the population (1920) was 401,428. The soil is extremely fertile, but there is little cultivation and nearly one half of the land is unoccupied. The chief crops are bananas, coffee, tobacco, and cereals. The imports are almost entirely manufactured goods and foodstuffs. A railway 47 miles in length joins the two oceans.

Revenue (1921-22)	£1,065,000
Expenditure (1921-22)	1,540,000

PAPACY, The.

The office of the ecclesiastical head of the Roman Catholic Church is vested in the Pope of Rome, who is the Sovereign Pontiff of the Western Church, and claims temporal power over the Papal States which were incorporated with Italy from 1860 to 1870, the territory of the Papacy now being confined to the palaces of the Vatican and the Lateran and the Villa of Castel-Gandolfo, which are guaranteed to the Pope (with a yearly indemnity of 3,250,000 lire, which is neither claimed nor paid) by the Italian Government.

Sovereign Pontiff (260th), His Holiness Pope Pius XI. (Achille Ratti), born at Desio, March 31, 1857, elected Pope in succession to Benedict XV. Feb. 6, 1922.

British Envoy Extraordinary & Minister Plenipotentiary (Special Mission), Hon. Theo. Russell, C.B., C.V.O. (1922).

1st Secretary, C. J. F. Dormer.

Minister in London, Señor Don José P. Montero.

Consul-General in London, Alfred James, 14, Chiswell House, Finsbury Pavement.

An inland State of South America, situate between 20°-6° 30' S. lat. and 54°-62° W. long. The area of Paraguay (exclusive of the Chaco) is computed at 75,700 square miles, and it contains a population of about 800,000.

Paraguay was visited in 1527 by Sebastian Cabot, and in 1535 was settled as a Spanish possession. In 1811 Paraguay declared its inde-

pendence of Spain, and from 1814-1840 was governed by Francia, a Paraguayan despot, who was succeeded by Lopez, 1840-1862. In 1862 Francisco Solano Lopez succeeded his father, and in 1864 declared war against Brazil, Argentina and Uruguay being involved in the struggle. Against these three nations Lopez conducted a five years' war, which terminated in his defeat and death at the *Battle of Cerro Cord*, March 1, 1870. This dogged struggle reduced the country to complete prostration, and the population, which was 800,000 in 1857, is alleged to have fallen in 1870 to 250,000, of whom barely 30,000 were men. The present constitution was adopted at the close of the war, and under its provisions the head of the executive is the President, elected by an electoral college for four years and ineligible for office for eight consecutive years after the expiration of his term. A Vice-President is similarly elected, and succeeds automatically in the case of the death, expulsion or absence of the President. There is a Cabinet of 5 members.

Paraguay proper consists of a series of plateaus, intersected by abrupt ranges of hills, some of which reach an altitude of 2,000 to 3,000 feet above sea level. The Paraguay and Alto Paraná rivers are navigable at all seasons for vessels of 6 to 7 feet draft. Many of the tributary streams are also navigable for much of the year. The Pilcomayo river is navigable for small craft for 180 miles from Asuncion; but is liable to shrink unduly with drought. The plateaus are covered with grassy plains and dense forest, the soil being marshy in many parts and liable to floods; while the hills are covered for the most part with immense and valuable forests. The streams flowing into the Alto Paraná descend precipitously into that river. In the angle formed by the Paraná-Paraguay confluence are extensive marshes, one of which, known as "Neembucu," or endless, is drained by *Lake Ypoa*, a large lagoon, south-east of the capital. The *Chaco*, lying between the rivers Paraguay and Pilcomayo and bounded on the north by Brazil, forms the subject of a long standing dispute with Bolivia; it is practically a dead level, though a slight and uniform rise westward is now known to exist, and suffers much from floods and still more from drought.

The chief agricultural products are tobacco, yerba maté, oranges, timber, quebracho extract, hides and cassava (mandioca), maize, rice, sugar-cane, ground-nuts, and other tropical and sub-tropical plants. The forests contain many varieties of timber, but only cedar and a few of the best known hardwoods find a market abroad. Stock-raising, lumbering, tobacco growing, and the gathering of *Yerba* (Paraguay tea), are the principal industries. The chief articles of export are hides, timber, yerba maté, tobacco, quebracho extract, cattle and meat products, oranges, and petit grain oil. The Army numbers 2,000 to 3,000 men. A railway, 232 miles in length, which belongs to an English company, connects Paraguay with the Argentine railway system. The journey from Asuncion to Buenos Aires (985 miles) occupies 53 hours. Train ferries enable the run to be accomplished without break of bulk. The language is Spanish.

Revenue (Estimate)	1921-2.	£ 801,066

Consul-General in London, Sir Harry Foster, 82 Victoria Street, S.W. 1.

Persia—called by the natives Irân—comprises an area of 630,000 sq. ms., with a population estimated at 10,000,000. By the Anglo-Russian Convention of Aug., 1907, Great Britain and Russia mutually engaged to respect the integrity and independence of Persia, while marking out certain regions in S.E. and N.W. Persia respectively in which each had, for geographical and economic reasons, special interests. On Aug. 9, 1919, this Agreement was superseded by a Treaty between Great Britain and Persia, by which Great Britain agrees to respect the integrity of Persia, and to provide a loan of £2,000,000, in return for the security of diplomatic and commercial relations between the two countries, and for the purpose of establishing order and developing the resources of the State. This agreement was, however, never put into force, and was denounced by the Persian Government (with the concurrence of Great Britain) in Feb., 1921.

In March, 1921, Persia signed a treaty with the Russian Soviet Republic, which provides (*inter alia*) for mutual diplomatic and consular representation, restores to Persia Firuzeh and Ashurada, annuls all concessions previously

granted to Russians in Persia, hands over the Russian Discount and Loan Bank to the Persian Government, cancels all Persian debts to Russia, denounces all previous Russo-Persian treaties, abolishes the "capitulations" as regards Russian subjects in Persia, and denounces all treaties made between Russia and third Powers regarding Persia.

Persia is mostly an arid table-land, encircled, except on the east, by mountains, those in the north rising to 18,700 ft. The central and eastern portion is a vast salt desert. The only navigable river is the Karun, which was opened to foreign navigation from Mohammerah to Ahwaz in 1888. There are only 8 miles of railway open, and travelling is mostly by caravans, and transport by pack-animals. The cost of carriage is, therefore, very heavy. An option for the construction of a railway from Khanikiu to Tehran *via* Kermanshah and Hamadan (with a branch to Enzeli on the Caspian) was granted in 1920 to the Persian Railways Syndicate.

The chief products are cereals, cotton, gums, dried fruits, silk, tobacco, and opium. The minerals (little worked) are salt, iron, coal, copper, lead, sulphur, &c., with turquoises. Oilfields in Southern Persia have been successfully worked by an English company since 1902. The only important manufacture is that of woollen carpets (mostly a domestic industry), but shawls, silks, and cotton fabrics are also produced. There are extensive forests in the north and west. Sheep and goats are numerous, and good wool is produced. The principal towns are Tehran (pop. 210,000), Tabriz (180,000), Isfahan (80,000), Meshed (80,000), Kerman (50,000), Yazd (60,000), and Shiraz (60,000). The Persians are mostly Shiah Muhammadans; but there are many adherents of Babiism (an eclectic form of Deistic religions), and Armenian Christians. The laws and popular education are based on the precepts of the Koran. Persia is divided into provinces, of which the principal are under Governors or Governors-General.

Owing to increasing popular discontent with a corrupt and incompetent administration and an extravagant Court, a nationalist movement began in Dec., 1905. In Aug., 1906, the Shah, Muzaffer-ud-Din, admitting the need for reforms, granted a Constitution. He was succeeded in 1907 by his son Muhammed Ali Shah, who was deposed by the National Assembly in 1909, to be succeeded by his son, Sultan Ahmad Shah (under the regency of Nasr-ul-Mulk, until 1914).

The revenue (£1,480,780 in 1913-14) is derived from land tax, Crown lands, customs, opium, salt, and lease of monopolies. The foreign debt of Persia amounted (Dec. 31, 1916) to £6,325,700. The apparent increase in the trade figures is due to the fall in the exchange. British commercial interests in Persia much exceed those of any other country, the trade between the British Empire (including India and Mesopotamia) and Persia amounting to more than 50 per cent. of the total trade of the country. The sea-borne trade of Persia passes chiefly through the ports of Bushire, Bunder Abbas, and Mohammerah, and *via* Baghdad. The shipping of the Persian Gulf is principally British.

Persia's Foreign Trade.

(In thousands of krans.)

	Imports.	Exports.	Total.
1913-14.....	647,165	455,840	1,103,005
1914-15.....	499,323	396,058	895,381
1915-16.....	464,108	377,135	841,243
1916-17.....	494,771	433,895	928,666
1917-18.....	468,066	338,714	806,780
1918-19.....	476,387	270,869	747,156
1919-20.....	629,793	267,817	997,610
1920-21.....	482,352	355,617	837,969

The value of the kran has varied (since 1900) from 18 to 70 krans to £1 sterling; in 1920-21 the exchange value was about $4\frac{1}{4}d$, the previous year it was about $8\frac{1}{4}d$. The following figures are given to show the shares of various countries in Persia's trade:—

IMPORTS.		EXPORTS.	
Country.	%	Country.	%
British India	40.0	Egypt.....	34.2
Great Britain	31.3	Russia	20.5
Russia	13.5	Turkey	14.0
Egypt.....	5.8	British India	13.3
Turkey	2.6	Great Britain	8.8
Other countries ...	6.8	United States.....	3.6
		Other countries ...	5.6

100.0

100.0

In 1920-21 the leading imports into Persia were cotton fabrics, sugar, tea, iron and steel goods; the principal exports were heavy oils, benzine, petrol, cotton fabrics, fruit, pile carpets, and opium. In the last pre-war year 55 per cent. of Persia's imports came from Russia, against 13.5 in 1919-20.

CAPITAL, Tehran.

Vice-Consul, Señor Don Gerardo Vargas.

Con.-Gen. at Liverpool, Señor Don G. Leguía.

Consul, Glasgow, Señor Don Bruno Bueno.

Do., Cardiff, Señor Don Carlos Mackehenie.

Do., Southampton, Señor Don Edilberto Anderson.

Peru is a maritime Republic of South America, situated between $2^{\circ} 31' 20''$ and $19^{\circ} 13' S.$ latitude and between 69° and $81^{\circ} 19' W.$ The territory between $17^{\circ} 47' S.$ and $19^{\circ} 13' S.$ is occupied by Chile, as the result of the Pacific War of 1879-1882; in 1922 this "Tacna-Arica" question was submitted to arbitration by treaty between Peru-Chile. The area of the Republic is estimated at 532,000 square miles, and the population (1921) at 5,550,000. It is bounded on the north by the republics of Ecuador and Colombia, as the latter claims a territory in the Amazonian basin; on the east by Brazil and Bolivia, and on the south by Chile and Bolivia.

Peru was conquered in the early 16th century by Francisco Pizarro (born 1478, died 1541), who

subjugated the Incas (a tribe of the Quichua Indians), who had invaded the country some 500 years earlier, and for nearly three centuries Peru remained under the Spanish rule. A revolutionary war of 1821-1824 established its independence, declared on July 28, 1821. The constitution rests upon the fundamental law of Oct. 18, 1856 (amended Nov. 25, 1860), and is that of a democratic Republic under a newly drawn constitution of 1919. The President is elected for five years by direct vote of the people.

The country is traversed throughout its length by the Andes, running parallel to the Pacific coast, the highest points being *Huascaran* (22,050 feet), *Huandoy* (21,100 feet), *Arequipa* (or *Misti*) volcano (20,013 feet), *Hualcan* (20,000 feet), and *Lirima*, *Tocora*, and *Sarasara*, all over 19,000 feet. There are four distinct regions, the *costa*, west of the Andes, the *sierra* or western slopes of the Andes, the *punas* or mountainous wastes below the region of perpetual snow; and the inward slopes and boundless forests of the Amazonian basin. The coastal area, lying upon and near the Pacific, is not tropical, though close to the equator, being cooled by the Humboldt-Current; its chief products are sugar, cotton, petroleum, wool, hides and skins, and it contains the chief towns and most of the white population. In the barren mountain section are to be found minerals in great richness and variety which await improved transport facilities before their production can be considerably increased; it is inhabited by Indians in a low state of civilization. Upon the eastern slope of the Andes are to be found very large tracts suitable for cultivation and stock raising, at present almost wholly unexplored owing to lack of communication. This part of the country should show most interesting developments in the future. The tropical lowlands lie east of the Andes towards the borders of Brazil, and consist mainly of unexplored or little known country inhabited by Indians in a savage state. There are here dense jungles, of which the principal commercial product is wild rubber. The gold production in 1921 was valued at £326,458, and in 1920 at £265,972. The Lobos and other islands on the Pacific coast provide guano.

The principal imports are coal, cotton, woollen, linen and silk goods, drugs, earthen and stone wares, machinery, explosives, metals and manufactures thereof, oils, stationery, paper manufactures, timber, and wheat. The chief exports are cane sugar, cotton and copper. In Jan.-June, 1922, the U.S.A. sent 41.4 of the imports and took 40.8 of the exports, while the U.K. sent 18.5 per cent. and took 25.1 per cent.

The total length of the railways open (1920) was about 1,984 miles. There is also steam navigation on Lake Titicaca and the River Desaguadero. The eastern rivers are also navigated to some extent by steam craft. Wireless telegraphy stations have been established in many places.

Defence.—The Army is recruited by voluntary enlistment, supplemented by conscription, and numbers about 5,000 of all ranks; the Navy includes two cruisers built at Barrow, and a destroyer bought from the French Government, and 2 submarines.

Spanish is the official language of the country, but native dialects (of which Quichua is the most important) are spoken by a considerable portion of the Indian population.

 Consul, London, K. Komierowski.
 Financial Attaché, Sir M. de Rutkowski, K.C.M.G.
 Commercial Attaché, A. Koziell-Poklewski.

The Republic of Poland was proclaimed at Warsaw in November, 1918, and under the Treaty of Versailles (June 28, 1919) the assentors to the Covenant of the League of Nations, and the signatories of the Treaty of Peace, guarantee the independence of the Republic, which is reconstituted within the limits of the 18th-

century "Polish Commonwealth." This state extended in the year 1772 over an area of 740,000 sq. kilometres, and included a population of about 13,000,000. The political neighbours of the Republic are the Baltic Sea, the German Republic (Prussian Königsberg District), and the Republic of Lithuania, in the N.; the Republic of Czecho-Slovakia in the S.; the Kingdom of Rumania in the S.E.; Soviet Russia in the E.; and Germany in the W. The present area of the Republic may be estimated at 386,273 sq. kilometres, with a population, at the 1921 census, of 27,160,000 (of whom 18,660,000 are Poles, and 8,500,000 other nationalities). The predominant religion of the people is Roman Catholic, but all faiths enjoy equality, and there are a considerable number of Protestants and a very large number of Jews.

In 1919 hostilities broke out between Poland and Soviet Russia, and after initial successes the "Red" armies of Bolshevik Russia appeared (in August, 1920) likely to deal a crushing blow at Polish independence, the capital (Warsaw) being in peril of capture. A dramatic counter-attack by the Polish troops at the critical period reversed the nature of the campaign. Poland was enabled to conclude peace on favourable terms, and claimed the renunciation by the Soviet at Moscow of about 120,000 sq. kilometres, containing a population of about 3,620,000 (1,048,000 Poles).

GOVERNMENT.—A Republican form of government was adopted by the Constituent Assembly in 1921, the Chief of State exercising the executive authority through a Ministry responsible to the Legislature. The Legislature consists of a Diet (*Sejm*) elected by universal adult (male and female) suffrage, and of a Senate elected by adult (male and female) suffrage of those over 30 years of age. The Constitution voted on March 17, 1921, is very Liberal.

PRODUCTION.—Mining, cotton, metal work, agriculture, forestry and stock raising are the principal industries, the chief crops being rye, wheat, oats, barley, potatoes, and sugar-beet; the live stock includes cattle, horses, sheep, and pigs. There are valuable coal mines in Upper Silesia, Congress Poland, and Little Poland (Galicia); zinc, lead ore, mineral and potassium salts, and in Galicia (Boryslaw) are famous oil fields; the output of crude oil (1919) was 831,700 tons; (1920) 765,020 tons; (1921) 704,870 tons. The chief manufactures are textiles, those of minor importance being machinery and metal works, chemicals, and leather. The exports in former years were principally agricultural produce and textiles, the imports being raw wool, cotton and jute, woollen and cotton goods, and machinery.

DEFENCE.—The peace effective of the army is 17,000 officers and 250,000 other ranks. A small navy, for coastal defence, is being organized.

EDUCATION.—Education is compulsory and free, and there is considerable voluntary effort in addition to the work of the State. Secondary education is conducted on a high level, with good attendances, and there are universities at Cracow (founded 1364), Warsaw, Lwow, Poznan, Lublin, and Wilno; Polytechnics at Warsaw and Lwow, and an Academy of Science at Cracow.

COMMUNICATIONS.—There are about 10,000 miles of railway and over 25,000 miles of telegraph line, with well-developed telephone systems in all the large centres. Over 4,000

* Peruvian £100 = (Sept. 1922) £100.

miles of navigable waterways exist on the Vistula, Narew, Bug, Warta, and Pilica, of which about 1,100 are navigable by steamers. The free city of Danzig is within the Polish Customs area, free transit for Germany being guaranteed.

FINANCE.—The revenue for 1922 was estimated at 458,620,000,000, and the expenditure at 591,634,000,000, shewing a deficit of nearly 133 milliards of Polish marks, which will be partly met by a loan and partly by credit operations. In accordance with laws of Feb. 28, 1919, and Sept. 26, 1922, a new currency (*Złoty*) is being considered, the *Złoty* being of the value of one 300th of a kilogram of gold.

The capital, WARSAW, on the Vistula (which is spanned by four magnificent bridges) contains many fine buildings; its population in 1914 was about 800,000, and in 1921, 931,176. Other large towns are Lodz (451,000), the centre of the textile industry; Lwow or Lemberg (219,000); Posen, on the Warta (170,000); Cracow, on the Vistula (182,000); Vilna (129,000); Bialistok (77,000), and Sosnowice (86,700).

PORTUGAL.

(Republica Portuguesa.)

President, Antonio José d'Almeida, *assumed office* Oct. 6, 1919.

CABINET (Feb. 6, 1922).

Prime Minister and Interior, Senhor Antonio Maria da Silva.
Foreign Affairs, Senhor Barbosa de Magalhães.
Justice, Dr. Joao Catanho de Menezes.
Finance, Capt. Albano A. Portugal Durão.
Colonies, Capt. Alfredo Rodriguez Gaspar.
Instruction, Dr. Augusto Pereira Noone.
War, Gen. Antonio X. Correias.
Commerce, Senhor Eduardo Lima Bastos.
Marine, Capt. Victor Hugo de Azeredo Coutinho.
Labour, Senhor Vasto Borges.
Agriculture, Senhor Ernesto Navarro.

Minister Extraordinary and Plenipotentiary, Senhor M. Teixeira-Gomes, G.B.E., 12, Gloucester Place, Portman Square, W. 1.
1st Secretary, Senhor J. A. de Bianchi, O.B.E., 32 Cumberland Mansions, Bryanston Square, W. 1.
2nd Secretaries, Senhor H. G. da Silva; Senhor J. de Lima Santos.

Naval Attaché, Comm. F. Branco.

Military Attaché, Col. A. L. Ferraz, D.S.O.

Commercial Counsellor and Consul-General (London), Senhor O. G. Potier, 12, Tavilton St., Gordon Square, W.C. 1.

Vice-Consul (London), Maj. M. C. V. Hurst, Queen Anne's Mansions, St. James's Park, W. 1.

Portugal lies in 37°—42° 8' N. lat. and 6° 15'—9° 30' W. long., being 360 miles in length from N. to S., and averaging about 100 in breadth from E. to W. Continental Portugal contains an area of 35,500 square miles, with a population in 1920 of 6,399,355, and the Portuguese Colonies a total area of 804,841 square miles, with a population estimated at 9,675,000. The Azores and Madeira are regarded, not as colonies, but as a part of continental Portugal. The chief products are wheat, barley, oats, maize, flax, hemp, and the vine in elevated tracts; in the lowlands, rice, olives, oranges, lemons, citrons, figs, and almonds. There are extensive forests of oak, chestnut, sea-pine, and cork, the cultivation of the vine and the olive being among the chief branches of industry; the rich red wine known to us as "port" is shipped from Oporto. Its mineral products are important—copper, lead, tin, antimony, coal, manganese, iron, slate, and bay-salt, which last, from its hardness and purity, is in demand. Its manufactures consist of gloves, silk, woollen, linen, and cotton fabrics, metal and earthenware goods, tobacco, cigars, &c. The exports consist to the extent of 50 per cent. of wine, which is the chief industrial product of the country; others are cork, cattle, copper-ore, fruits, oil, sardines, and salt. The imports are manufactured goods—hardware, cotton and woollen stuffs, machinery, wheat, sugar, dried fish, coal, &c. The commercial marine (1917) numbered 104 steam and 102 sailing vessels, with a tonnage of 122,726. In 1918, 5,566 vessels, of 3,284,995 tons, entered the ports of the Republic. Railways 1,827 miles in extent were open for traffic in 1917, and there were 5,351 miles of telegraph line in 1917. For many years the national income was considerably less than the expenditure; this deficiency has added to the national debt.

Defence.—Service in the militia is universal and compulsory. The peace effective is about 32,000. War strength, about 150,000. The Navy consists of 1 coast-defence ship, 4 protected cruisers, some old pattern gunboats, 4 destroyers, and 3 submarines and 4 gunboats, acquired in England (1920), and 6 ex-Austrian destroyers, manned by about 4,898 sailors.

Education is free and nominally compulsory between the ages of 7 and 15, but is not strictly enforced, and over 75 per cent. of the population above 7 years old are illiterate. Secondary education is conducted in State lycées. There are also military, naval and other special schools. The University of Coimbra (1921) had 1,100 matriculated students in 1910.

	1921.

Honorary do., M. N. Gologan, 28 Crescent Road, Norbiton.

Commercial Attaché, M. Gr. Michaelso.

Rumania is a kingdom of South Eastern Europe in the classical *Dacia* and *Scythia Pontica*, the territory roughly defined by the three great rivers Danube, Theiss, and Dniester, whose central point is the line of the Carpathians. The territory is known as Wallachia, Moldavia, Bessarabia, Bukovina, Crizana-Maramuresh, Transylvania, with part of the Banat and of the Dobrudja. The kingdom has its origin in the union of the Danubian principalities of *Wallachia* and *Moldavia* and the addition thereto of a strip of Southern *Bessarabia* under the *Treaty of Paris* (April, 1856). The principalities remained separate entities under the suzerainty of the Turkish Empire until 1859, when Prince Alexander John Cuza was elected Prince of both Principalities, still under the suzerainty of the Porte. Prince Cuza abdicated in 1866 and was succeeded by Prince Charles of Hohenzollern-Sigmaringen, in whose successors the crown is now vested. By the *Treaty of Berlin* (July 13, 1878) a new Principality (consisting of the two above mentioned) was recognised as an independent State, and part of the *Dobruja* (which had been occupied by the Rumanians) was incorporated in the new Principality. On March 27, 1881, the former Principality was recognised by the Great Powers as a Kingdom. Rumania is not a "Balkan" State. She took no part in the military operations of the Balkan League against Turkey in 1912-13. Her unexhausted military power secured for her a readjustment of her south-eastern (*Dobruja*) frontier in 1913. In the War of 1914-1918, Rumania fought on the side of the Allies from Aug. 27, 1916, and after many vicissitudes (due mainly to the sudden collapse of the Russian Armies in 1917), she emerged in triumph at the cessation of hostilities. Her territories were greatly increased as a result of the War, and the *ante bellum* area of the Kingdom (53,000 sq. miles) was more than doubled by the inclusion within its borders of *Bessarabia*, *Transylvania*, *Bukovina*, and part of the *Banat* of *Temesvar*. The area of the enlarged Kingdom of Rumania may thus be estimated at 122,282 sq. miles, and the 1914 population of 7,000,000 has been increased to 17,000,000. The dominating religion is that of the Greek (Orthodox) Church.

GOVERNMENT.—The government is that of a Constitutional Monarchy, the legislative assembly consisting of a Senate (56 members) elected for 8 years, and of a Chamber of Deputies (361 members) elected for 4 years by universal suffrage, provision being made for the proportional representation of minority parties. The executive is entrusted to a council of ministers.

PRODUCTION.—The soil of Walachia, Bessarabia, and Moldavia is among the richest in Europe, and it was stated in August, 1921, that "from a comparative point of view Rumania would probably be one of the first war convalescents to attain complete recovery." The wheat crop for 1921 was 2,138,148 metric tons. The agricultural produce consists of wheat, maize, millet, oats, barley, rye, beans,

and peas. Vines and fruits are abundant. The fertile plain of Transylvania yields large crops of maize, wheat, rye, oats, flax, and hemp, and the rich lands of Bessarabia produce wheat, maize, barley, flax, tobacco, water melons, fruit, and grapes. Agriculture and sheep and cattle raising are the principal industries of the kingdom, but the climate of this part of South-Eastern Europe is of the Continental character, with intense winter cold and summer heat, and fierce summer droughts sometimes defeat these principal industries. The forests of the mountainous regions are extensive (11,888,792 acres), and the timber industry is important. The country is rich in minerals, and produces petroleum, salt, coal, lignite, iron, gold, and mica; the workers in the oilfields number about 50,000 and are the largest single unit of workers in any one industry; the production of petroleum was 1,885,225 tons in 1913, 1,934,048 tons in 1920, and 1,163,780 tons in 1921. Manufactures are in their infancy, and the imports are chiefly the manufactured goods of Western Europe; the exports consist principally of wheat, barley, maize, oats, petroleum, timber, cattle, salt and hides. All estates over 100 hectares have been expropriated and divided among the peasants.

DEFENCE.—Service in the Army is universal and compulsory. In the War of 1914-1918 over 900,000 all ranks passed into the Armies of Rumania, and of this number over 25 per cent. were killed or returned as "missing." At the resurgence of Nov. 1918, an army of 400,000 was again in the field. This force was the deciding factor in the Rumanian-Hungarian question, and it drove the Bolshevik dictator (Bela Kun) into exile from Buda Pest. There is a small Navy on the Black Sea (30 vessels) and on the Danube.

EDUCATION is free and nominally compulsory, there being 19,374 schools with 1,612,763 in attendance. Secondary schools are well attended. There are also special schools and Universities at Bucharest, Jassy, Cluj, and Cernauti. A Government High School of Commerce was opened in 1913.

COMMUNICATIONS.—In 1919 there were about 7,131 miles of railway open for traffic in the whole kingdom; railway communication requires great development in order to cope with the problem of carrying the cereal crops to the shipping ports. There are 19,715 telegraph and telephone offices. The mercantile marine consists of about 120 steamers and 600 sailing vessels. The Black Sea port of Constantza (*Dobruja*) is linked with the interior by a railway. A European Commission, exercising sovereign powers over the navigation of the Lower Danube, has its seat at Galatz.

Budget revenue	1921-22.	*lei 7,708,477,296
Budget expenditure		7,708,477,296

Prior to the War of 1914-18 the Russian Empire

of the Tsar Nicholas II. covered more than

8,500,000 square miles, with a population of

about 183,000,000.

The area of Soviet Russia may be estimated

at 5,500,000 to 6,000,000 square miles, and a

census taken under the auspices of the Soviet

Government in August, 1920, gave a population of about 136,000,000, of whom 47 per cent. were males and 53 per cent. females; estimates appear to have been made for the territories not immediately under the control of the Soviet Republic.

The territory of the former Russian Empire was diminished as a consequence of the Great War of 1914-18 by the severance of Poland, Finland and the Baltic States (Estonia, Latvia and Lithuania), and the remaining territory now consists of a collection of States, of which the greater number form a confederation, with the Russian Socialist Federal Soviet Republic as the centre. Others are nominally independent, but are bound by treaty or other arrangement to the central government at Moscow, while the Ukraine, Khorezm (Khiva), Bokhara, Georgia, Armenia, Azerbaijan, White Russia and the Far Eastern Republic have been recognised by Soviet Russia as Independent States.

The Russian Socialist Federal Soviet Republic (Capital, Moscow), arose from the military revolution of Nov. 7, 1917, which transferred the power from the Republican Cabinet of Kerensky to "People's Commissioners," appointed by an "All Russia Congress of Soviets," the Soviets being Councils of delegates elected by workmen, soldiers and peasants throughout the country. The opposing theories of government were known as "Maximalist" and "Minimalist" rule, the Soviets claiming to represent the Maximalists or largest class, the Republican Cabinet being accused of representing only the bourgeoisie, or smallest (Minimalist) class. The Maximalists or Bolsheviks (Bolshevik = majority) professed to act in the name not only of the people of Russia, but in harmony with a projected "Federation of the Proletariates of the World."

The military revolution took place during the Great War of 1914-18. It was accompanied by a *déba*che in the field, and many of the soldiers abandoned their arms and returned to their homes, while the armies of the Central Powers advanced victoriously into Russian territory, and after granting an armistice they imposed on the Soviet government the crushing conditions of the Treaty of Brest Litovsk (March 2, 1918), which remained effective until the military strength of Germany and Austria was broken by the Allies.

The Bolshevik régime had been fostered by the Central Powers and was opposed by the Allies, who sent such naval and military help as could be afforded to various bodies who were stemming the tide of Bolshevism in Siberia (Admiral Kolitchak), South Russia (Denikin), and North Russia (Tchaikovsky), mainly with a view to create a diversion on the eastern German-Austrian front, and in response to a declaration of war by the Soviets against governments which were held by them to be representative of Minimalist rule and of the bourgeoisie they had pledged themselves to eradicate. But the

• Bolshevik propaganda work has been extensively carried on in Europe and the United States, but has gained few adherents in democratic countries. The principal agency for Bolshevik propaganda abroad is the *Rosta* (Russian Telegraph Agency), which has at its disposal considerable sums derived from the "nationalisation" of the banks and commercial houses of the bourgeoisie. Personal propaganda is directed by Koppelmann Semenov. In 1920 the sum of £575 was offered by the Soviet government as a subsidy to the London Labour organ, *The Daily Herald*. The money available is derived principally from the sale of jewels of murdered Russian men and women.

victorious close of the European War caused a growing reluctance among the Allied Nations for further military adventures, and the reinforcements sent in 1918 were withdrawn during the autumn and winter of 1919 from Archangel and Murmansk in the North, from Odessa in the South, and from Vladivostok in Siberia. The withdrawal preceded a collapse of the "White" resistance to the "Red" (Bolshevik) armies. In 1920 war broke out between the Republic of Poland and the Soviet armies, in conjunction with operations under General Wrangel, the successor of Denikin in the South. After initial successes the Polish armies were driven back and Warsaw appeared to be in imminent danger of capture, when a dramatic recovery saved the Polish capital and brought about negotiations for peace on terms favourable to Poland, under the *Treaty of Riga* (March 19, 1921).

The Central Government of pre-War Russia was an absolute autocracy, the country being regarded as the estate of the autocrat and the public revenue as his private income, from which the expenses of administration were met. Reforms of various kinds were introduced from time to time. The peasants, who constituted 75 per cent. of the inhabitants, were freed from the condition of serfdom in 1861 by the Tsar Alexander II., and land was allotted to them in communal ownership; and in 1906 the Imperial *Duma* (parliament), elected under the tentative constitution, was opened by the Tsar, but it possessed little authority and its recommendations were usually ignored, while it was liable to be dissolved at the will of the Tsar. The government in force at the outbreak of the War in 1914 was "Constitutional" in name alone, as the limits to the power of the ruler were subject to the possibility of an immediate and complete resumption of the former autocracy, at the will of the autocrat.

Local Government, on the other hand, was highly developed. In the rural districts (containing 80 per cent. of the inhabitants) the village communities elected councils under the presidency of a *starosta* (mayor), villages being grouped into provinces and thus into governments, with larger elective councils for the administration of local affairs. Combined with this system of village communities was a highly organised system of co-operative trading, the villagers being grouped by voluntary association into districts, usually corresponding with local government areas. The produce of the soil was disposed of in return for manufactures obtained by the Society and distributed at the Co-operative shops. Municipalities were also administered by elective councils under the presidency of a mayor, but in many cases the local authority of such municipalities was overshadowed by the superior authority of the military governor.

Education was not widespread in the Tsar's dominions. Primary schools afforded only the most elementary instruction, and the attendance was voluntary, while they were closed in rural districts during the summer months. Secondary schools existed only in the great cities, and the eleven universities had only 40,000 students of both sexes. Fully 90 per cent. of the peasants (*i.e.* 72 per cent. of the people) were illiterate. A rural *starosta* who could neither read nor write was in no way unusual, and accounts were frequently kept for the local branch of the Co-operative Society by the village schoolmistress or by the priest, the *abacus* being employed by

the shopkeeper for simple additions of roubles and kopeks by means of movable balls (of different colours) on a wire frame.

For many years a sullen undercurrent of unrest had been noticeable in Russia, particularly among the University students and the educated classes. The movement spread rapidly among the workers and peasants from about the year 1860, and was secretly organised in 1869 as the "Society for the Liberation of the People." The reforms originally demanded were neither anti-dynastic nor revolutionary, but the impatient extremists endeavoured to hasten reform by violent means, and resorted to terrorism and assassination to achieve their aim, which was criticised as a desire to reduce rule to anarchy, and to substitute for existing authority "nothing," as expressed in their nickname. This *Nihilism* was kept in check by a large force of Secret Police, whose methods were generally arbitrary and frequently inhuman, arrest on suspicion of membership of a secret society, or of sympathy with Nihilism, being followed by banishment for life or by penal servitude in the mines of Siberia.

Involved in the War from Aug. 1, 1914, the military forces of the Tsar fought against the armies of the Central Powers with varying success. On March 12, 1917, owing to the avowed hostility of the *Duma*, the Tsar Nicholas II abdicated, but the successor nominated by him was not admitted to power, and a provisional government was set up under Prince Lvov. On May 16, 1917, this administration was taken over by a Republican Cabinet under Alexander Kerensky, but Kerensky failed to establish a settled government.

Soviet Russia is governed by the President and Council of the Peoples' Commissaries, in the name of the All Russian Congress of the Councils of Workmen's, Peasants' and Soldiers' delegates, of which the Council is the Central Executive Committee, nominally for the benefit of the People of Russia; but the so-called Bolshevik, or majority, rule is in effect that of a minority, and it is upheld by an army which contains a large proportion of foreign (largely Chinese) mercenaries, by methods in every way as undemocratic as those of Tsardom. "Liberty" is dismissed by the Soviet government as a *Bourgeoisie* superstition, and freedom of the Press and free speech are similarly regarded. The most powerful body in the country is a Secret Service Committee, known as the *Tche Ka*, which denounces all who are suspected of Counter-Revolutionary tendencies, and although this body was nominally dissolved in 1922 its activities do not appear to have ceased.

Before the War the annual revenue of the Empire was about 3,500,000,000 roubles (at the 1914 rate of exchange 9'458 roubles = £1 sterling).

The estimates of Soviet Russia for 1918, 1919 and 1920 are as under in paper roubles:—

	Revenue.	Expenditure.	Deficit.
1918 ..	15,800,000,000	46,700,000,000	30,900,000,000
1919 ..	50,600,000,000	325,800,000,000	75,300,000,000
1920 ..	150,000,000,000	2,150,000,000,000	2,000,000,000,000

◊ The Tsar Nicholas II, with the Tsaritsa, Tsarevitch Alexis (their apparent), and the Princesses (and such faithful adherents as remained to them), were arrested by order of the Kerensky Cabinet. They were subsequently captured by the Bolsheviks, and on July 16, 1918, the Tsar and his family and attendants were butchered in cold blood.

showing a deficit for 3 years of 1,106,100,000,000 paper roubles. A budget for the first nine months of 1922 showed an expenditure of 1,403,000,000 gold roubles and a deficit of 239,000,000 gold roubles.

The Russian Debt.

The outstanding Foreign Debt of Russia on Jan. 1, 1917 (before the Revolution), with the annual charge for Interest, may be stated as under:—

	Debt.	Interest.
To Great Britain..	£629,674,406	£34,000,000
To France.....	Francs 3,950,000,000	Francs 828,700,000
To U.S.A.	\$282,136,011	\$10,100,000
To Japan	Yen 256,000,000	Yen 20,700,000
To Italy.....	Lira 36,123,836
To Netherlands..	Guilders ..	Guilders 59,800,000

In Aug. 1914 there was a gold reserve in the State bank to the value of £176,000,000. All internal and external obligations of the State were repudiated by the Soviet government, but in 1921 there were indications of a desire to reconsider the repudiation of the external debt, in order that trade relations might be resumed. The internal debt has been increased by many millions of roubles monthly by the indiscriminate issue of paper money, the amount in circulation on April 1, 1922, being stated at 17,250,000,000,000 roubles. Before the War of 1914-8 the paper rouble was worth about 2s.; on Oct. 4, 1921, the exchange in Moscow was quoted at 231,000 paper roubles = £1 sterling, and in July 1922 the rate of exchange was said to be 10,500,000 paper roubles to £1. All banks and financial and trading concerns and shipping enterprises have been declared to be the property of the proletariat, and the balances and credits have been dissipated by theft or neglect. Private ownership of land has been abolished and all real estate has been declared proletarian property. The Church was also disestablished and all Church property confiscated by the Soviet Government; while it was reported to the Archbishop of Canterbury that 23 Bishops had been murdered by Bolsheviks from 1917-1920.

The harvest of 1912 produced 21,478,312 tons of wheat, 25,842,956 tons of rye (the staple food of the peasants and workmen), 10,321,593 tons of barley, 15,569,348 tons of oats, 2,354,006 tons of millet, 2,861,106 tons of maize, 37,399,474 tons of potatoes, and 124,466 tons of tobacco. Before the War, Russia was one of the largest exporters of wheat, and produced a surplus of rye; but in 1921 the crops were reported to be insufficient for home requirements, and over two millions of the inhabitants were reported to be faced with starvation in the winter of 1921-22. The live stock included (1914) 52,052,000 cattle, 72,273,000 sheep, lambs and goats, 14,995,000 pigs, and 34,973,000 horses.

In 1913 the mineral output of Russia was 57,230,000 tons of coal (principally from the Donetz basin), gold, platinum (337 poods of 36lb.), pig iron (7,400,000 tons), copper, quick-silver, salt and lead.

In 1914 the Imports into Russia were valued at 1,100,000,000 roubles, and the Exports from Russia at 960,000,000 roubles, a total trade at 9,458 roubles = £1 of £217,480,000, the chief imports from the United Kingdom being machinery and coal, the exports to the U.K. being principally cereals, timber, eggs and flax. In March, 1921, the Tenth Communist Congress met at Moscow, and Ulianov Lenin is reported to have declared his abandonment of

Communism and conversion to the principle of natural economic development under Trade Treaties with Great Britain and such other Powers as can be induced to enter into similar obligations. At the Genoa Conference (May, 1922) the Bolshevik delegates failed to give assurances as to the attitude of the Soviet Government, and negotiations for loans and trade relations were abortive.

In 1921 the total trade of Russia was about one-tenth of that carried on in 1913. Russian imports were derived as to 35 per cent. from Great Britain, 24 per cent. from Germany, 15.8 per cent. from U.S.A., and 10.1 per cent. from Norway and Sweden. The exports were sent as to 47.9 per cent. to Great Britain, 22.7 per cent. to Latvia, 12.9 per cent. to Norway, and 5 per cent. to Germany.

Imports from U.K. ...	1920, £16,833,383	1921, £7,115,400
Exports to U.K.	35,522,892	...

There were (1913) 46,839 miles of railway with a gross revenue of £112,213,000, 15,261 post offices carrying 2,663,900,000 letters, &c., and 476,177 miles of telegraph wire. Under Soviet administration the financial deficit on the working of the railways has increased in proportion as transport conditions have deteriorated. In 1918 the deficit was 6,000,000,000 roubles, in 1919 more than twice that amount, and in 1920 it was 51,000,000,000 roubles. The principal railway lines are the main European network from Petrograd, through Moscow to Astrakhan and across the Urals *via* Perm, Ufa, Samara and Saratov, with northern extensions to the Kola Peninsula and to Archangel and running southwards to the Baltic, the Crimea and the Caucasus; the Trans-Siberian Line from Chelyabinsk, on the Ural frontier, to Omsk, and round Lake Baikal to Chita and Stryetensk. From Chita the line crosses the Manchurian frontier (as the Eastern China Railway) to Harbin and Vladivostok, where a northward extension runs to Khabarovka. The projected Amur Railway, when completed, will connect Stryetensk with Khabarovka, and the Trans-Siberian line will thus connect the western and eastern limits of Russia on Russian territory. The Trans-Caspian Railway runs from Krasnovodsk (opposite Baku) to Askabad, Merv, Bokhara, Samarkand, Khokand and Andijan, with a 200-mile branch from Merv to Kushk (near Herat) on the Afghanistan border. The Orenburg-Tashkent Line, from the European boundary, across the Kirghiz Steppe to Kazalinsk, Perovsk and Tashkent, whence a short line connects with the Trans-Caspian system. The Trans-Caucasian Line runs through the autonomous Republics of Georgia, Azerbaijan and Armenia, from Batum and Poti, on the Black Sea, *via* Tiflis, to Baku, on the Caspian, where it is met by the European system of Rostov on the Don. From Tiflis branches run to Kars, and *via* Erivan to Mount Ararat on the Armenian frontier, and to the Persian frontier at Julfa. There are in European Russia about 150,000 miles of navigable rivers and canals and lakes, of which total about one-fourth of the distance is navigable by steam vessels, a further eighth by sailing vessels, and nearly one-third by rafts. In Asiatic Russia there are 85,000 miles of waterway, of which 20,000 miles are navigable. Some 175,000 persons were engaged in the traffic (1910), the vessels numbering (in 1910) 4,000 steamers and 23,000

sailing vessels. In 1906 the ships and rafts carried over 400,000,000 tons of goods.

The principal ports of Soviet Russia are Petrograd and Kronstadt on the Gulf of Finland; Archangel on the White Sea, and Ekaterinsk in the Kola River (Murmansk); and Petropaulovsk in Kamchatka.

On March 14, 1918, the seat of Government was transferred from Petrograd to Moscow, which had a population in 1914 of about 1,500,000, reduced by famine, assassination and misrule to about 700,000 in 1920. PETROGRAD (before the War "St. Petersburg") the former Capital, founded by Peter the Great on the banks of the Neva in 1721, had a population in 1914 of 2,000,000 (estimated at 1,000,000 in 1920). Other centres are Saratov (240,000), Rostov (200,000), Ivanovno-Voznesensk (170,000), Samara (150,000), Tula (135,000), Yaroslavl (130,000), Nijni-Novgorod (120,000), Vitebsk (100,000), Gsmel (100,000), Ufa (100,000), Perm (100,000), and Tsaritsin (100,000). Archangel had about 45,000 inhabitants in 1914.

Republics in Federation with Soviet Russia.—The following governments have been set up since the dissolution of the Russian Empire. Their existence has been recognized by Soviet Russia, but their autonomy is limited, *Foreign Affairs, Foreign Trade, and War* being excluded from the Local government and reserved for the Federal Authority at Moscow; while the military forces in the various states are under the orders of the "All Russia Extraordinary Commission."

The Crimean Republic, consisting of the Crimean peninsula (the ancient Tauric Chersonese), created by decree Oct. 8, 1921, with its capital at Simferopol (population about 85,000), the chief port being Sevastopol (population about 62,000), on the Black Sea.

The Daghestan Republic, bounded on the south by Georgia and Azerbaijan and on the east by the Caspian, with the Gorsky Republic as a western neighbour. The capital is Derbent (population 35,000) on the Caspian.

The Gorsky (Mountain) Republic, bounded on the east by Daghestan and the Caspian, and on the south by Kabardá Province and Georgia. Capital, Vladikavkaz (population 80,000) on the Azov-Caspian railway.

The Bashkir Republic, between Ekaterinburg and the Kirghiz Republic. Capital, Sterlitamak. The Bashkirs are Muhammadans and are believed to number about 600,000.

The Tartar Republic, south of the Votyak Province, includes the confluence of the Vyatka with the Volga, the capital being Kazan (population 200,000) on the Moscow railway.

The Kirghiz Republic, south of the Trans-Siberian Railway, is bounded on the south by Turkistan and on the west by the Caspian. The capital is Orenburg (population 150,000) on the Moscow railway. Other large centres are Ural'sk (50,000) and Akmolinsk (45,000).

The Turkestan Republic, comprising the former Russian Provinces of Ferghana, Syrdaria, Amu-Daria, Samarkand and Semirychensk, with a total area of about 420,000 sq. miles and a population of about 7,000,000, extends from the Aral Sea in the W. to the boundaries of the Chinese Republic in the E., and between the Kirghiz Republic on the N., and Khiva, Bokhara and Afghanistan on the S. The capital is Tashkend (population

1914, 275,000), other large centres being Khokhland (pop. 1914, 125,000), Samarkand (pop. 1914, 100,000), Andijan (pop. 1914, 90,000), and Namangan (pop. 1914, 80,000).

Quasi-Independent Provinces.—The following Provinces have been recognized as autonomous, but there is a link with the Central Authority at Moscow in the person of a "Commissar for Nationalities" at each Provincial Capital, while each Province has a representative attached to the "Commissariat for Nationalities" in Moscow.

The Karelian Labour Commune, bounded on the west by Finland and extending eastward to the White Sea and the Murmansk-Petrograd Railway, the southern limit being Lake Ladoga, with an undefined boundary in the north in the neighbourhood of Lake Imandra. Capital, Petrozavodsk (population 20,000) on the western shore of Lake Onega and a station on the Murmansk railway.

The Ziriensk Province, part of the former government of Archangel, and extending westward to the North Dwina river. Capital, Ust Syolsk.

The Votyak Province, part of the former government of Viatka, extending northwards to the Petrograd-Ekaterinburg railway. Capital, Ijevsk (population 40,000).

The Marinsk Province, to the west of the Tartar Republic, is part of the former government of Nijni-Novgorod, the capital being Krasnokokshaisk.

The Tchuwash Province, south of the Marinsk Province. Capital, Tcheboksarakh.

The German Volga Province, consisting of the old German settlements on the Volga, with capital at Markstadt, on the Saratov-Samara railway.

The Kalmuick Province, which includes the mouth of the Volga and extends round the western shore of the Caspian from the Kirghiz Republic (N.) to the Gorsky Republic (S.) and westward to the Tsaritsin-Ekaterinodar railway. Capital, Astrakhan (population 200,000), on the Caspian Sea.

The Kabardá Province between the Gorsky Republic (N.) and Georgia (S.), with capital at Naichik, on the Azov-Caspian Railway.

The Buryat Mongol Province, extending from the Yenisei River (W.) to Lake Baikal and the Far Eastern Republic, and (S.) to the Chinese boundary. Capital, Irkutsk (population 130,000) on Lake Baikal and a station on the Trans-Siberian Railway.

The Yakut Province, a sparsely populated area of 1,500,000 sq. miles in North Eastern Siberia, contained in 1914 a population of less than 350,000, the chief industry being hunting and trapping in the forest regions and agriculture in the S. There is considerable mineral wealth. The capital is Yakutsk on the Lena river, the centre of the Siberian fur trade (pop. 1914, 20,000).

Sovereign States.—Certain parts of the former Russian Empire (in addition to Finland, Poland and the Baltic States) have declared their independence of the Moscow government and have been recognized by Soviet Russia as sovereign states.

The Independent Republics in European Russia so recognized are:—

The Ukraine Socialist Soviet Republic, see UKRAINE.

The Georgian Socialist Soviet Republic, see GEORGIA.

The Armenian Socialist Soviet Republic, see ARMENIA.

The Azerbaijan Socialist Soviet Republic, see AZERBAIJAN.

The White Russian Socialist Soviet Republic, see WHITE RUSSIA.

The Independent Republics in Asiatic Russia so recognized are:—

The Khorezm People's Soviet Republic, see KHIVA.

The Bokhara People's Soviet Republic, see BOHKARA.

The Far Eastern Republic, see FAR EASTERN REPUBLIC.

SARRE TERRITORY.

Under the *Treaty of Versailles* Germany renounced the government of the Sarre Basin in favour of the League of Nations, the government being entrusted to a commission of 5 members nominated for one year by the League. At the expiration of 15 years from June 28, 1919, the population will be called upon to decide by a plebiscite the government under which they wish to be placed. The total area is about 743 square miles, with a population of about 700,000. The chief towns are Sarrebruck (110,000), Neunkirchen (35,000) and Saint Ingbert (18,000).

SALVADOR.

Republica del Salvador.

President (1919-1923), Señor Jorge Melendez, assumed office March 1, 1919.

Vice-President, Dr. Alfonso Quinonez Molina.

Interior and Public Works, Dr. Arturo Arguello.

Foreign Affairs (ad int.), Dr. Arturo R. Avila.

Finance, Dr. Reyes Arrieta Rossi.

War and Marine, Dr. Pio Romero Bosque.

Consul-General in London (acting), G. Le Bourdonnec, 7, Union Court, Old Broad Street, E.C. 2.

The Republic of Salvador extends along the Pacific coast of Central America for 170 miles, with a general breadth of 43 miles, and contains an estimated area of 7,225 square miles, with a population estimated at 1,271,336. It is divided into 14 departments.

Salvador was conquered in 1526 by Pedro de Alvarado, and formed part of the Spanish vice-royalty of Guatemala until 1821. In 1840 the Republic broke away from the federation of Central American States. The constitution rests upon the fundamental law of 1864 (revised in 1886), the President and Vice-President being elected for four years by direct vote of the people, the President being ineligible for a successive term in either office.

There are distinct areas in the low alluvial plains of the coast and the interior plateau, with a mean elevation of about 2,300 feet, broken in many places by volcanic cones, of which the highest are Santo Ana (8,300 feet) and San Miguel (7,120 feet). The lowlands are generally hot and unhealthy. There is a wet season (winter) from May to October, and a dry season (summer) from November to April. Earthquakes are frequent, and on June 8, 1917, a series of seven shocks nearly destroyed the capital, and ruined the towns of Santa Tecla, Armenia, and Apopa. The volcano on Mount Salvador was actually in eruption in Oct. 1917, and a severe earthquake

was experienced on April 28, 1919, doing great damage to the capital.

The principal river is the Rio Lempa, which rises in Guatemala and flows into the Pacific, with tributaries in the Santa Ana, Asaguate, Sumpul and Torola, the Lempa being navigable for most of its course by small steamers. In the eastern districts the Rio San Miguel rises near the Honduras boundary and flows into the Bay of Fonseca. The western boundary crosses the Laguna de Guija, the greater part of which lies within the borders of Salvador, and in the centre of the Republic is the large volcanic lake Ilopango, with a smaller lake, Contepeque, further west.

The chief industry is the cultivation of coffee; sugar is also grown and indigo, rice, &c., are important crops. The principal exports are coffee, indigo, tobacco, sugar, silver, balsam (known as balsam of Peru), rice, hides, cedar, and fustic. The chief imports are cotton goods (from the U.S.A. and U.K.), and leather, hardware, chemicals and motor cars.

A British railway nearly 100 miles in length connects Acajutla with the capital and Santa Ana, the coffee centre, and a line from the port of La Union to the capital was opened in 1922. The principal ports are Acajutla, La Libertad and La Union.

There are 120 post-offices and 234 telegraph offices, with 2,400 miles of wire.

The language of the country is Spanish.

SAN MARINO.

A small Republic in the hills near Rimini, on the Adriatic, founded, it is stated, by a pious mason of Dalmatia in the 4th century, and governed by a Council of 60, of whom two are elected as Regents for six months (1 April and 1 October), being thereafter ineligible for office for three years. The area is 33 square miles, the population 12,036. There is an army of about 1,000. The city of San Marino (pop. 2,000) occupies the slope of Mount Titano, and has an impregnable castle, where King Berengar of Lombardy took refuge in 950 A.D., a fine church

* \$ (Colon) at par = 50 cents U.S. currency.

and Government palace, and a theatre. Agriculture and viticulture flourish. A Treaty of Extradition was concluded between the Governments of Great Britain and the Republic of San Marino on 16th Oct., 1899.

FLAG: Two horizontal bands, white, blue.

British Consul for San Marino, E. Mervyn de Garston (Leghorn, Italy).

Consul-General for San Marino in Great Britain, Commendatore Melvill A. Jamieson, F.R.G.S., 17 Cockspur Street, S. W. 1.

SERBIA. See Yugo-Slavia.

SIAM.

(Muang T'ai.)

King, Rama VI., G.C.B., G.C.S.I., G.C.V.O., born January 1, 1880; succeeded October 23, 1910.

Foreign Minister, H.R.H. Prince Dewawongse.

Envoys Extraordinary & Minister Plenipotentiary, in London, Phya Buri Navarath, 23 Ashburn Place, S. W. 7.

Consul-General (Vacant: Temporary Offices, 23 Ashburn Place, S. W. 7).

The Kingdom of Siam, or Muang T'ai (area about 195,000 square miles; population, 1914, 8,150,000), is a buffer State between British Burma and French Indo-China, and its integrity is guaranteed by the British and French Governments by the Anglo-French Agreement of April, 1904. The King is an absolute monarch, and appoints his successor. There is an Executive Council of Ministers and a general adviser in Foreign affairs (usually of American nationality), and, since 1895, a Legislative Council of State, consisting of the Ministers, eight royal princes, and over twenty members appointed by the King, who has an absolute power of veto. A number of English, French, Italians, Danes, and Americans are employed in the various State departments. There is an army of nearly 50,000 men, and a few small gunboats; compulsory military service has been introduced. The Kingdom contains many Chinese (largely engaged in trade and industry), besides Shans, Laos, Malays, Burmese, and Cambodians, and over 1,600 Europeans. The principal religion is Buddhism. Education is now under the Minister of Public Instruction. There are 394 public schools and 4,137 schools of all kinds, attended by 122,800 children. A University is in process of organisation.

The upper part of Siam is mountainous, the lower flat. Bangkok is the only much-frequented port. Over two-thirds of Siamese sea-borne trade, which centres at Bangkok, is with the British Empire, and is largely in the hands of British firms or of Chinese trading from Singapore and Hong Kong. German shipping, which had held the lead in tonnage for many years past, has ceased to visit Bangkok since August, 1914, and, as a consequence, there has been a large increase in Norwegian and British shipping. The chief products of Siam are rice, teak, and tin (from Lower Siam). The area under rice is being much enlarged by irrigation. There is a large number of rice mills, mostly in or near Bangkok. The teak industry in the great forests of N. Siam is mainly in English hands. In 1918-19 rice constituted 81 per cent. and teak 3½ per cent. of the exports from the port of Bangkok; while hides and marine products are also exported in considerable quantities. Among imports are treasure, cotton goods and yarn, silk goods, provisions, gunny bags, kerosene, sugar, opium, metals and

metal wares, machinery, &c. The general tariff rate is 3 per cent. *ad valorem*. Burma imports teak and cattle overland from Siam, and exports thither cotton and silk goods, &c. Except tin, wolfram, rubies and sapphires, there are no important mineral products as yet. About 1,200 miles of railroads (mostly State-owned) are now open for traffic. Railways from Bangkok run to Korat (165 miles N.E.), Chiangmai (820 miles N. of Bangkok), Petrii (40 miles E.); the southern line to Trang, on the west coast of the Malay Peninsula, was open to traffic in October, 1916, and in July, 1918, was completed to the Kedah border where junction with the Federated Malay States Railway system was effected. There is through railway connexion between Bangkok and Penang and Singapore. Good roads are few. There are 3,000 miles of telegraph lines.

Naval Attachés, Lieut.-Comm. Señor Don Manuel
 de Vierna; Surg.-Lieut.-Comm. Señor Don
 Emilio Gutierrez Pallardo.
Consul-General, Excmo. Señor Don José Con-
 gosto, 40 Trinity Square, E.C. 3.
Vice-Cons., Señor Don Pedro Lecuona.

A Kingdom situate in the south-west of Europe,
 between 36° 43' 45" N. lat. and 4° 25' E. — 9° 20'
 W. long., bounded on the south and east by the
 Mediterranean, on the west by the Atlantic and
 Portugal, and on the north by the Bay of Biscay
 and France, from which it is separated by the
 Pyrenees; and occupying the larger portion of the
 great Iberian Peninsula. Its coast-line extends
 1,317 miles—712 formed by the Mediterranean and
 605 by the Atlantic—and it comprises a total
 area of 196,700 English square miles, and an
 estimated population, in Jan. 1921, of 21,347,335
 —108½ to the square mile. The interior of the
 peninsula consists of an elevated tableland
 surrounded and traversed by mountain ranges
 —the Pyrenees, the Cantabrian Mountains,
 the Sierra Guadarrama, S. Morena, S. Nevada,
 Montes de Toledo, &c. The principal rivers are
 the Douro, the Tagus, the Guadiana, the Guadal-
 quiver, the Ebro, and the Minho. The Consti-
 tution upon which the present Government is
 formed is dated 30 June, 1876. The principal
 towns are Madrid (pop. 751,352), Barcelona
 (710,335), Valencia (443,783), Seville (205,527),
 Malaga (150,584), Murcia (141,175), Saragossa
 (141,350), Bilbao (112,819), Granada (103,368),
 Cartagena (96,891), and San Sebastian (61,971);
 and there are 16 other towns with over 50,000
 inhabitants. Spain is rich in iron, copper,
 and lead; its mineral resources are only
 partially exploited, and principally by foreign
 capital under foreign direction. The country
 is generally fertile, and well adapted to agri-
 culture and the cultivation of heat-loving
 fruits—as olives, oranges, lemons, almonds,
 pomegranates, and dates. The agricultural pro-
 ducts comprise wheat, barley, maize, oats, rice,
 with hemp and flax of the best quality. The
 vine is cultivated in every province; in the
 south-west, Jerez, the well-known sherry and
 tent wines are made; in the south-east, the
 Malaga and Alicante. The principal articles
 imported are raw cotton, spirits, fish, wheat and
 flour, sugar, coal, timber, woollen manufactures,
 machinery and railway materials, hides, &c.
 The principal exports are wine, copper and
 copper ores, lead, iron ores, olive oil, raisins,
 oranges, cork, esparto grass, wool, salt, quick-
 silver, grapes, &c. Trade was for many years
 mostly confined to France and Great Britain, but
 Germany had, before the war, become a serious
 competitor, while the United States and Belgium
 share an increasing proportion of Spanish trade.
 Home manufacture is protected by high customs
 duties.

In 1920 there were 9,430 miles of railway open,
 and 69,400 miles of telegraph line. The sea-
 going mercantile marine over 50 tons, on Jan. 1,
 1921, consisted of 621 steamers (912,817 tons)
 and 581 sailing vessels (101,285). In 1919, 14,811
 vessels of 9,520,196 tons entered and 15,358 vessels
 of 10,017,056 tons cleared at Spanish ports.

Defence.—The authorised peace establishment,
 including forces in North Africa, was, in 1922,
 19,827 officers and 217,000 men (275,000 in 1922,

owing to the situation in North Africa). War
 strength: Field Army, first line, 300,000; second
 line, 450,000.

The Navy consists of 3 (15,700-ton) battleships
 and 3 modern cruisers, with 1 old battleship and
 4 old cruisers; there are also 7 torpedo-boat
 destroyers, 20 torpedo-boats, 7 submarines, and
 21 gunboats.

Education, *Primary*, is nominally compulsory
 and mainly free, and is State-aided, the public
 schools being maintained by local taxation.
 Many private schools are under clerical control,
 and supervision is lacking. *Secondary* High
 Schools are in each province, but the curriculum
 is defective. *Universities* at Barcelona, Granada,
 Madrid, Murcia, Oviedo, Salamanca, Santiago,
 Saragossa, Seville, Valencia, and Valladolid.

BRITISH CHAMBER OF COMMERCE FOR SPAIN,
8 Rambla de los Estudios, *Barcelona* (Branch,
9 Calle Marqués de Cubas, *Madrid*).
Madrid, 1,150 miles; transit, 45 to 50 hours.

The BALEARIC ISLES are an archipelago of 15 islands in the Mediterranean, the largest being Majorca, Minorca, Ibiza, and Formentara; the total area is 1,935 square miles, with a population (1921) of 338,894. The archipelago forms a province of Spain, the capital being Palma in Majorca.

CEUTA, which forms part of the Province of Cadiz, is a fortified post on the Moroccan coast, opposite Gibraltar. The total area is 5 miles, with a population of 34,708.

The CANARY ISLANDS are an archipelago in the Atlantic, off the African coast, consisting of 7 islands and 6 uninhabited islets. The total area is 2,807 square miles, with a population of 473,497. The Canary Islands form a Province of Spain, the capital being Santa Cruz in the island of Tenerife.

Spanish Colonies.

The Spanish Colonies (exclusive of Ceuta and the Canary Islands, which form an integral part of the kingdom) consist of certain settlements and islands of Western Africa, with a total area of close on 82,400 square miles, and a population exceeding 275,000.

FERNANDO PO (*Fernando Póo*) lies in the Bight of Biafra in 3° 12' N. lat. and 8° 48' E. long., about 20 miles distant from the west coast of Africa, and is a mountainous island (Pico de Santa Isabel, 10,800 feet), with forests of oil palm, ebony, mahogany, and oak and sugar-cane, cotton, and indigo. Cocoa, coffee, sugar, tobacco, vanilla, and kola nut are cultivated, and large quantities of cocoa and other products are exported. The capital is Basile, and the largest town Port Clarence (1,500 inhabitants). Dependencies of the island of Fernando Po are:—

Annobon Island (*Anno Bom*), in the Gulf of Guinea, in 1° 24' S. lat. and 50° 35' E. long.

Corisco Islands, consisting of Corisco, Bana, Elobey Grando, and Elobey Chico, lie in Corisco Bay, and export ebony, logwood, and other forest produce.

Fernando Po—British Vice-Consul, A. C. Reeve (acting).

RIO DE ORO is a possession on the north-west coast of Africa, between Cape Bogador and Cape Blanco, or approximately between 21° 20'–26° N. lat., and extending eastwards to about 13° W. long. The territory is part of the waterless Sahara, with a sparse population of wandering Muhammadan Arabs.

RIO MUNI (or *Spanish Guinea*) is a coastal settlement of West Africa between Cameroonian and French Congo (1° N.—2° 10' N. lat.), extending about 125 miles inland. The inhabitants are Bantu tribes, and the principal settlements are at the mouths of the Muni, Benito, and Campa rivers, and at Bata on the coast.

Spain exercises a protectorate over a part of Northern and of Southern Morocco (see pp. 802–3) and on the Moroccan seaboard are certain Spanish *presidios*, formerly used as convict settlements.

Melilla is a town on a rocky promontory of the Riff coast, connected with the mainland by a narrow isthmus. The population is 37,565.

Alhucemas is a settlement on the bay of that name, and includes six islands.

Peñon de la Gomerá (or *Peñon de Velez*) is a fortified rocky islet about 40 miles west of Alhucemas Bay.

The Chafarinas (or Zaffarines) are a group of three islands near the Algerian frontier, about 2 miles north of Cape del Agua; population about 1,000.

Ifni, on the Atlantic coast of Morocco, about 100 miles south of Agadir, affords access to the interior of south-west Morocco, but has no great trade at present.

SPITSBERGEN.*

The Spitsbergen ("Pointed Mountain") Archipelago lies between $76^{\circ} 26' - 80^{\circ} 50'$ N. lat. and between $10^{\circ} 20' - 32^{\circ} 40'$ E. long., with an estimated area of 25,000 square miles. The archipelago consists of a main island, known as West Spitsbergen (12,000 sq. miles); North East Land, closely adjoining and separated by Hinlopen Strait; the Wiche Islands, separated from the main land by Olga Strait; Barents and Edge Islands, separated from the main land by Stort Fjord (or Wybe Jansz Water); Prince Charles Foreland, to the W.; Hope Island, to the S.E.; Bear Island (70 square miles) 127 miles to the S.; with many similar islands in the neighbourhood of the main group.

The archipelago is generally mountainous and there are traces of extinct volcanic action. The highest points are Mount Newton (5,676 feet), Mount Poincaré (5,446 feet) in the N.E., and Hornunstind (4,690 feet) in the S., of the main island. The coast is deeply indented by fjords, of which the largest are King's Bay, Cross Bay, Ice Fjord, Bell Sound, Lowe Sound, and Horn Sound in the W., and Red Bay, Liefde Bay and Widje Bay in the N.; of these, Ice Fjord from the W. and Widje Bay from the N., the heads of which are only about 10 miles apart, give access to the centre of West Spitsbergen.

The principal minerals are coal, gypsum, oil and building stones. In 1917 the coal export was 40,000 tons, and in 1918 60,000 tons (mainly to Scandinavia); the 1919 output is estimated at 100,000 tons. The archipelago is visited by whalers (but the industry is declining), and by hunters for seal and wild fowl.

Certain districts in the main island (West Spitsbergen) have been named as follows:—King James Land and New Friesland (W. and E. of Widje Fjord) in the N.; Sabine Land, in the centre; and Torell Land in the S. There are settlements at Longyear "City" (on Ice Fjord); Davis "City" (on Lowe Sound); Green Harbour (at the S. entrance of Ice Fjord) with a high power Telefunken wireless station (erected by the Norwegian Government) connecting with Europe; and Coal Haven (in King's Bay).

South Cape is 370 miles from the Norwegian Coast. Ice Fjord is 520 miles from Tromsø, 650 miles from Murmansk, and 1,300 miles from Aberdeen. Transit from Tromsø to Green Harbour (the postal station) $2\frac{1}{2}$ to 3 days; from Aberdeen 5 to 6 days.

THE SUEZ CANAL.

The Suez Canal.—The *Compagnie Universelle du Canal Maritime de Suez* is an Egyptian company, authorised in 1856, and confirmed in 1866, with a capital of 200,000,000 francs in 400,000 shares of 500 francs each. The British Government acquired from the Khedive in 1875 a total of 176,602 shares (cost £4,000,000, value March 31, 1922, £19,740,125).

The Suez Canal was opened in 1869. The total length of the canal is 101 miles, with a width of 45 metres (147 ft. 8 in.), having cost 761,522,220 francs to construct and enlarge; the maximum draught of water allowed for vessels using the canal is 9.14 metres (30 feet). The average time for the transit through the canal is 16 hours 28 minutes. By a convention, signed on Oct. 29,

1888, the canal was exempted from blockade, and vessels of all nations, whether armed or not, are to be allowed to pass through it in peace or war. The management of the canal is entrusted to a council of 32 administrators, of whom 10 are British (three representing H.M. Government and seven the shipowning interest).

British Directors, Lord Inchcape, O.C.M.G., K.C.S.I., K.C.I.E. (*Vice-President of the Company*); Sir Fredk. Green, K.B.E.; T. Harrison Hughes; Oswald Sanderson; Sir E. Wyldbore-Smith; Sir Owen C. Phillips, G.C.M.G.

Representing H.B.M. Govt., H. T. Anstruther, Sir Ian Malcolm, K.C.M.G.; Sir J. T. Davies, K.C.B., C.V.O.

The transit receipts in 1870 were 5,718,756 fr., and in 1920, 151,917,267 fr.

The rate of transit dues as from Oct. 1, 1921, is 8 fr. per ton, and 5 fr. 50 c. for vessels in ballast.

The net dividends for the year 1915 amounted to 120 fr. on the ordinary 500 fr. shares, and 97.915 fr. on the Actions de Jouissance. In 1920, the dividends were 243.851 fr. and 218.091 fr., respectively.

The following table shows the number and tonnage of vessels which have passed through the Suez Canal since 1914, with the percentage of British vessels:—

Year.	No. of Vessels.	Net Tons.	British Tonnage.
			%
1914	4,802	19,419,495	66.5
1915	3,708	15,266,155	76.3
1916	3,110	12,325,347	79.6
1917	2,353	8,368,918	73.6
1918	2,522	9,251,602	79.5
1919	3,986	16,013,802	70.9
1920	4,009	17,574,657	61.7
1921	3,975	18,118,999	62.9

The tonnage of the merchandise carried was 25,776,000 tons in 1913; 17,049,000 tons in 1920; and 17,509,000 tons in 1921. Details of the nationality of the vessels passing through the Canal in 1921 are appended:—

	No. of Vessels.	Net Tons.	Per cent. (Tonnage).
British	2,418	11,397,019	62.9
Netherlands	459	2,031,625	11.2

Attachés, L. R. G. Arfvedson; G. O. Broms.

Social Attaché, Dr. E. R. Sjöstrand.

Naval Attaché, Commander A. de Bahr.

Agricultural Adviser, M. W. F. de Wachenfelt.

Chancellor, J. Stille.

Consul-General, E. G. Sahlin, 329 High Holborn, W.C. 1.

Vice-Consuls, S. Lagerberg; Harry Eriksson.

Swedish Church, Harcourt Street, Marylebone Road, W. 1.

Sweden comprises the eastern half of the Scandinavian peninsula, and comprises the capital and 24 governments, "Län," with an area of 173,086 square miles, and a population, Dec. 31, 1921, of 5,954,316, nearly all Protestant. This area includes the great lakes of Hjälmaren, Mälaren, Vänern, and Vättern. Nearly 46 per cent. of the population are devoted to agriculture, about 208,000 being owners and 50,000 tenants of the land they cultivate. The country for the most part is flat with pleasant undulations, rising in the north-west to the Kölen Mountains, which separate Sweden from Norway; and may be divided into three separate districts—the northern, forest; central, mining; the southern, agricultural. The climate in the south is favourable for producing grain. The principal articles of cultivation are the various cereals—oats, rye, barley, wheat—and potatoes. The forests are very extensive, covering one-half of the surface of the country, and con-

sisting of pine, birch, fir; these are of great importance, supplying timber, pitch, and tar, and the chief fuel of the country, in addition to sulphite and mechanical wood pulp for the paper-making industry. The mineral products are extremely rich; iron of excellent quality, that known as the Dannemora iron being converted into the finest steel; gold and silver in small proportions; copper, lead, nickel, zinc, cobalt, alum, sulphur, porphyry, and marble. There is a railroad opening up the rich iron-ore districts of Lapland, and mineral trains run from Gellivare and Kiruna to Luleå on the Gulf of Bothnia and to Narvik on the Atlantic. Considerable mines of coal are being worked in Scania. The chief imports are coffee, wine, tobacco, and other ordinary colonial produce, coal, cloth, yarn, wool, cotton, skins, manure, iron, fish, oils, wheat, rye, pork, and machinery. The chief articles of export are timber, butter, iron, steel, wood pulp, paper, matches, stone, iron and zinc ores, &c. In 1920 the exports of paper were 274,575 tons, and in 1921 the exports were about 183,000 tons.

Railroads 9,433 miles in length (of which 3,419 are the property of the State) were open on Jan. 1, 1922; and 49,659 miles of telegraph wires (inclusive of 22,150 railroad telegraph wires), 149 stations, and 1,913 railroad and 1,425 other telegraph stations. There were at the same date 419,237 miles of telephone wires.

Defence.—Service in the Army is universal and compulsory. The peace effective is about 92,000 trained men. The first line can be raised to war strength of about 110,000; second line, 85,000. The Navy consists of 71 fighting vessels (436 guns), 19 being ironclads, with submarines, submersibles, and some training ships, &c.

Education.—(i.) *Primary*: Compulsory and free. Illiteracy rare. Maintained by local taxation, with State grants. Attendance good. (ii.) *Secondary*: Well-developed, schools numerous and efficient. (iii.) *Special schools* make a feature of technics and navigation. (iv.) *Universities*: Lund, Upsala, and private faculties in Stockholm and Gothenburg.

* The President is elected in December, and remains in office from 1 Jan.—31 Dec.; he is generally succeeded by the Vice-President.

It is composed of 22 Cantons, of very dissimilar size, united under a Constitution dated 29 May, 1874, and comprises a total area of 15,950 square miles, with a population of 3,888,320 in 1920, who are divided between Roman Catholics, 40 per cent., and Protestants, 59 per cent., Jews numbering 7,400, and others 11,000. The population is formed by three nationalities, distinct by their language, as German 71 per cent., French 21 per cent., Italian 6 per cent., and Romanshe (in the Grisons), 1½ per cent. The most important cities are Zurich, pop. (1920) 207,161, Bale 135,976, Geneva 135,059, Berne 104,626, and Lausanne 68,533. It is the most mountainous country in Europe, having the Alps, covered with perennial snow and glaciers, rising from 5,000 to 15,213 feet in height, not only along its southern and eastern frontiers, but throughout the chief part of its interior; and the Jura mountains in the north-west. Agriculture is followed chiefly in the valleys, where wheat, oats, maize, barley, flax, hemp, and tobacco are produced, and nearly all English fruits and vegetables are grown. The forests cover about one-sixth of the whole surface. The manufactures consist chiefly of silks, cottons, linen, lace, thread, woollens, &c.; clocks and watches have long been the staple products of Geneva and Neuchâtel, while leather, gloves, pottery, tobacco and snuff, cheese, &c., are made. In 1914 there were 3,530 miles of railway in working order, 17,333 miles of telegraph line, 317,403 miles of telephone line, and 2,099 post-offices; the profit on the railways in 1920 was 47,300,000 francs.

The legislative power is vested in a Parliament, consisting of two Chambers, a National Council of 189 members, and a Council of States of 44 members; both Chambers united are called the Federal Assembly, and the members of the National Council are elected for three years, an election taking place in October. The executive power is in the hands of a Federal Council of 7 members, elected by the Federal Assembly, presided over by the President of the Confederation. The President has a salary of 27,000 francs; the Vice-President and other members of the Federal Council 25,000 francs each. The members of the Federal Council are elected for three years; each year the Federal Assembly elects from this council the President and the Vice-President; they are elected for one year, the five other members for three years. Not more than one of the same canton may be elected member of the Federal Council.

Defence: Militia. Active Army, 12 yrs.; initial trg., 65–90 days. Subsequently 11 days per ann.; then Landwehr, 8 yrs.; 1 trg., 11 dys. for dismt. branches only; then [Landsturm to age 48]. War Strength, 140,600; Landwehr, 65,000; Landsturm, 57,000.

Education.—Control by cantonal and communal authorities. No central organ. Illiteracy rare in Protestant cantons. (i.) Primary: Free and nominally compulsory, but attendance is not strictly enforced in the essentially Roman Catholic cantons. School age varies. (ii.) Secondary: Age 12–15 for boys. Schools numerous and well-attended, and there are many private institutions. (iii.) Special schools make a feature of commercial and technical instruction. (iv.) Universities: Bale, Berne, Fribourg, Geneva, Lausanne, Zurich, and Neuchâtel.

SYRIA, LEBANON AND CILICIA.

French High Commissioner, Général Gouraud.

Syria.—British forces, together with small French and Arab detachments, drove the Turks out of Syria and Lebanon in 1918, and occupied those districts and the district of Cilicia. By decision of the Supreme Council of the Allies the districts in question were entrusted to France, to be administered under a mandate.

The Emir Feisal (son of the King of the Hedjaz and, since 1921, King of Iraq) had from the outset assumed the administration of the districts of Aleppo, Hama and Homs, which had been assigned as Independent Arab districts under an earlier agreement of May, 1916, between France and Great Britain (the *Sykes-Picot Agreement*), and it was intended to allow the Emir to remain under French guidance, but on March 8, 1920, the "Syrian Congress" at Damascus declared Syria independent, and the Emir Feisal was crowned King of Syria. The action of the Syrian Congress did not receive the sanction of the Allied Powers, and General Gouraud occupied Damascus, Aleppo, Hama and Homs. The Emir Feisal left the country, and afterwards became King of Iraq (q.v.). The French Mandatory Zone has

* Estimated.

been divided into the four autonomous states of Great Lebanon, Damascus, Aleppo and the Alawites (the region round Latakia), each having a French adviser responsible to the High Commissioner at Beyrout. The actual form of government differs in each of the states, but the guiding principle in each is real and effective French control.

Syria is a geographical term for part of the former Turkish territories in Asia Minor, and its Northern limits are still undefined. The present temporary Northern boundary between Syria and the territory occupied by the forces of Mustafa Kemal Pasha (the leader of the Nationalist movement in Asiatic Turkey) was defined in the agreement between France and the Kemalists, and is roughly as follows:—From a point immediately S. of Payas (on the Gulf of Alexandretta) to Meidan Ekbes (the railway station and environs remaining in Syria), thence S.E. to the railway station of Tchoban Bey, leaving the districts of Marsova to Syria and of Karnaba and Killis to the Kemalists; thence along the Baghdad Railway to Nussebin and along the old highway to Jizireh-ibn-Omar on the Tigris (the districts of Nussebin and Jizireh-ibn-Omar remaining in Kemalist territory, with the roadway between these two places). The E. boundary separates Syria from Mesopotamia along a line running roughly N.E. from the E. side of Jebel Drazé to a point 15 miles S.E. of Jezir Ibn Omar (80 miles E. of Mardin); the S. boundary follows a line from Ras el Nakoura on the coast, N. of Akka, and running S.E. by E. to the Hedjaz railway line S. of Nashib, with a projection northwards to include the head waters of the Jordan, the Hule Lake and the Lake of Tiberias being included in Palestine. Within these limits, the estimated area is 100,000 sq. miles, with a population of about 3,000,000, of whom the greater number are Orthodox Muhammadans, with a proportion of Shiites and Druses. The products of Syria are wheat, tobacco, fruit, wine and silk, but there is little cultivation without irrigation, the inland districts being cut off from the moisture-laden winds by a mountain barrier, running parallel with the coast. The mineral wealth is believed to be unimportant, but there is a certain amount of bitumen. The principal Syrian towns are Damascus (est. pop. 300,000), Aleppo (250,000), Homs (70,000), and Hama (60,000). The administrative capital is at Beyrout (Grand Lebanon). Damascus contains the Mosque of the Omayyedes (where is the tomb of Saladin), and in the south-western quarter is "The Gate of God," through which the pilgrimage to Mecca passes annually, while the "street called Straight" (Acts ix, 11) runs E. to W. through the city. Damascus is an important commercial centre, and among its industries are metal work and mother-of-pearl inlay. At Baalbek (Heliopolis), on the western slopes of the Anti-Lebanon range (35 miles N.N.W. of Damascus), are ruins of 1st to 3rd century Roman temples (the Circular Temple, the Great Temple and the Temple of Bacchus), and in the vicinity of the ruins is the largest cut stone in the world (60 × 17 × 14 feet), weighing 1,500 tons. The railway system consists of a line from Beyrout to Damascus (narrow gauge), with a connexion at Rayak for Homs, Hama and Aleppo (standard gauge). A line from Tripoli to Aleppo is being re-laid, and was expected to be open in 1921. A narrow-gauge tramway runs

from Mameltein along the coast. From Damascus there is railway communication with Palestine, *via* Deraa, and the Syrian railways link up with the Baghdad railway at Aleppo.

The administrative Capital of Syria is Beyrout.

The *Great Lebanon* (the former Turkish provinces of Lebanon and Beirut), declared a State by the High Commissioner, under the title of *Etat du Grand Liban*, in 1920, extends along the Mediterranean littoral from the Palestine frontier to Nahr el Kebir (15 miles N. of Tripoli) and is bounded on E. by the Great Central Depression, known as the Bekaa, in which flow the rivers Orontes and Litani. Its total length is about 120 miles, and its width varies from 30 to 35 miles. The estimated area of the Great Lebanon is about 4,300 square miles, with an estimated population of 579,778. The products of the soil are olives, wheat, grapes, oranges and mulberry-trees; the live stock are numerous and one of the principal sources of wealth. The Capital is Beyrout (pop. 91,498), which is the chief seaport and also the administrative capital of Syria. Tripoli is the next important town, and as a seaport may rival Beyrout on the completion of the railway to Homs. Minor ports are Junieh, Tyre and Sidon. The national flag is the French tricolour with a Cedar of Lebanon on the white band.

Governor of the Great Lebanon, Capitaine de Frégate Traubaud.

Beyrout—British Consul-General, H. E. Satow, O.B.E.

" Vice-Cons., Lt.-Col. G. Mackereth, M.C., and L. C. Pettit (acting).

Aleppo—Consul, J. Morgan.

" Pro-Consul, A. Akras.

Alexandretta—Vice-Consul, J. A. Catoni.

Damascus—Consul, C. E. S. Palmer, D.S.C.

Cilicia extends round the Gulf of Alexandretta, from Lebanon in the south to the Anti Taurus in the north, and from the Seihun Irmak river in the west to Urfa in the east, the total area (which includes part only of the ancient Roman province of Cilicia, or of the Turkish vilayet of Adana) being about 12,000 square miles with a population estimated at 300,000. The country is generally fertile and produces wheat, cotton, wool, sesame, &c., and is capable of considerable agricultural development. The principal towns are Adana (45,000), the former capital of the Turkish vilayet of that name, Marash (50,000), and Alexandretta or Iskanderun (10,000), the chief port and an important strategical centre, with command of the Beilan Pass. Cilicia was handed over to the Kemalist forces by the French on Jan. 4, 1922. The district is now under the control of the Nationalist Assembly of Angora.

TAURIDA.

In March 1918 the former government of Taurida declared its independence as the *Taurida Republic*. The area is 13,312 sq. miles, with a population (1914) of 2,000,000, and the Republic is bounded on the N. by the Dnieper river and the Province of Ekaterinoslav, on the W. and S. by the Black Sea, and on the E. by the Sea of Azov. The soil is very productive, especially in its southern peninsular, known as the *Crimea* (the ancient Tauric Chersonese). The capital is SIMFEROPOL (pop. 1914, 85,000), other towns being Sevastopol (pop. 1914, 62,000), Kertch (pop. 1914, 60,000), Theodosia (pop. 1914, 44,000), Berdiansk (pop. 1914, 41,000), Yalta (pop. 1914, 31,000), Eupatoria, Melitopol, and Perekop.

TURKESTAN.

In Jan. 1918 the former Russian Provinces of Ferghana, Syr-Daria, Amu-Daria Samarkand and Semiriyehensk, with a total area of about 420,000 sq. miles and a population of about 7,000,000, declared their independence as the *Republic of Turkestan*. The territories of this Republic extend from the Aral Sea in the W. to the boundaries of the Chinese Republic in the E., and between the River Chu and Lake Balkash on the N., and Khiva, Bokhara and Afghanistan on the S. The capital is TASAKEND (pop. 1914, 275,000), other large centres being Khokhand (pop. 1914, 125,000), Samarkand (pop. 1914, 100,000), Adijan (pop. 1914, 90,000), and Namangan (pop. 1914, 80,000).

TURKEY.

(Memalik-i Osmaniye.)

*Sultan, Muhammad VI. (Wahid Ed-din), b. Jan. 12, 1861; succeeded his brother, July 4, 1918.

*His Presumptive, Abdul Medjid Effendi, born May 25, 1868.

Turkish Delegate in London, Mustafa Reshid Pasha, 169 Portland Place, W. 1.
1st Secretary, Chefik Bey Muftyzade.

The Ottoman Turks are derived from Central Asian tribes, who were converted to the Muhammadan faith in the seventh century. These Muhammadan tribes attacked and conquered the Asiatic Provinces of the Byzantine (Eastern Roman) Empire, and by the middle of the fourteenth century they had spread from Asia Minor into South East Europe. In 1453 they captured Constantinople, and spread over the whole of the Balkan Peninsula, their name of Osmanli, or Ottoman Turks, being derived from Othman, or Osman (1259–1326), a notable Turkish leader in the fourteenth century. Early in the sixteenth century the Ottoman Empire was spread over Egypt and northern Africa, and penetrated northward into Hungary, a great part of which was incorporated with the Turkish dominions until 1699, when the *Peace of Carlowitz* freed the country from Turkish rule. In the nineteenth century the outlying African dominions, with the exception of Tripoli, broke away from their suzerain, or were occupied by other Powers, and in the latter part of the century the northern states of the Balkan Peninsula asserted their independence, under guarantees of the Christian Powers. The outcome of these political upheavals was a demand for better government in the remaining dominions of the Sultan. During the process of constitutional reforms, which drove the Sultan Abdul Hamid (1876–1908) from the throne, war broke out between Italy and Turkey, and Tripoli and Benghazi were ceded to Italy under the *Treaty of Lausanne* (Oct. 12, 1912). These events were followed in the autumn of 1912 and the early months of 1913 by a disastrous war with the states of the Balkan League (Bulgaria, Montenegro, Serbia and Greece). At the outbreak of hostilities the European dominions of Turkey extended westwards to the Adriatic and northwards to Bosnia-Herzegovina (Austria), thus

* Following the military successes of Mustapha Kemal Pasha (Commander-in-Chief of the armies of the Angora Government in Anatolia) against the Greeks, the Angora Government called upon the Sultan to resign, and appointed Rafet Pasha "Governor of Constantinople," announcing that a Caliph would be appointed in place of Muhammad VI, but without civil functions. The Sultan had not abdicated at the time of going to press.

including the districts known as Macedonia, Thrace, and Albania. By the *Treaty of London* (1913), the north-western boundary of European Turkey was a line drawn from Enos, on the Adriatic coast, to Midia, on the Black Sea, thus excluding Adrianople, which had capitulated (after a long siege) to the Bulgarian forces. At the outbreak of the second Balkan war (in which Serbia and Greece were aided against Bulgaria by Rumania), Turkey re-occupied Adrianople, thus recovering a part of the lost dominions. In the war of 1914-1918, Turkey threw in her lot with the Central Powers and made unsuccessful attacks on Egypt and South Russia. Great Britain sent expeditions to Gallipoli (which were withdrawn) and to Mesopotamia and Palestine, which freed those countries and Syria from Turkish rule, while various tribal revolts in Arabia ended the Turkish suzerainty in that peninsula. On Oct. 30, 1918, Turkey surrendered unconditionally before the conquests of the various Anglo-Indian and Imperial British columns and their Arabian allies. The final peace settlement with Turkey has been the subject of protracted negotiations. The first definite proposals were embodied in the *Treaty of Sevres*, a summary of which was given in the 1922 "WHITAKER." This treaty was signed on Aug. 10, 1920, but was never ratified. The rise of the Turkish Nationalist movement in Asia Minor, which brought into existence a *de facto* Government at Angora, and the defeat of the Greek armies in August-September, 1922, have finally destroyed any possibility of the *Treaty of Sevres* being brought into force. The latest Allied proposals (Sept.-Oct., 1922) contemplate the re-establishment of Turkish sovereignty in Eastern Thrace up to the Maritza, including Adrianople, subject to certain guarantees for the "Freedom of the Straits" and for the protection of minorities. The Asiatic frontiers of the future Ottoman Empire remain still to be determined, except in so far as the frontier with Syria has been laid down in the Franco-Turkish (Nationalist) Agreement of Oct., 1921. It is proposed (Oct., 1922) to hold a Conference of interested Powers (including Turkey) to elaborate a final peace settlement.

Turkey in Europe is separated from Asia by the Bosphorus at Constantinople and by the *Dardanelles* (Hellespont)—about 40 miles in length, with a width varying from 1 to 4 miles—the political neighbours being Greece and Bulgaria on the west.

Turkey in Asia (200,000 sq. miles, estimated population 11,000,000) comprises the whole of Asia Minor, and extends from the Aegean Sea to the western boundaries of Georgia, Erivan and Persia, and from the Black Sea to the Mediterranean, and the northern boundaries of Syria, Arabia and Iraq. This area corresponds approximately with *Anatolia* ("Land of the Rising Sun," or Orient) of the Greek historians.

All other territories formerly subject to the Ottoman Empire are now independent of Turkey. The *Aegean Islands* and the *Dodecanese* are transferred to Greece and Italy, *Cyprus* and the *Sudan* are recognised as British Protectorates, while *Syria*, the *Great Lebanon*, *Mesopotamia*, *Palestine* and *Arabia* are independent of Ottoman rule. *Egypt*, transferred from the suzerainty of the Sultan by the *Treaty of Sevres*, became an independent kingdom in 1922.

The Capital of the Ottoman Empire and the principal town of European Turkey is Constanti-

nople (the Roman city of Byzantium, selected by Constantine the Great as the capital of the Roman Empire about A.D. 328 and renamed by him; became capital of the Eastern Roman Empire, A.D. 364), population estimated at 1,200,000; those of Asiatic Turkey are Smyrna (200,000), Broussa (100,000), Scutari in Anatolia (80,000), Kaisariya (70,000), Sivas or Sebasteia (65,000), and Trebizond (60,000).

The present Sultan is in direct descent from Othman, the founder of the Empire, in whose line the succession is vested, the eldest male representative in the direct succession being the presumptive or apparent heir. The Sultan is Caliph of the Muhammadan world.

The religion of the State is by law Muhammadan, and the majority of the inhabitants are Muhammadans, but there are large numbers of Christians (of the Latin and Eastern rites) and Jews. Education is nominally compulsory and free. There are primary schools, training schools for teachers, and at Constantinople a university, founded in 1900.

Although the soil of Turkish Asia Minor is generally fertile, agriculture is still very primitive. Cereals are abundantly produced, cotton, tobacco, and coffee are generally cultivated, and figs, nuts, grapes, olives, and many varieties of fruit are grown. Samsoun is the chief centre of the tobacco growing industry, which is also of importance at Smyrna, Ismidt and Broussa. Cattle raising is an important industry. The export of merchandise was considerable before the War, and consisted principally of coffee, opium, tobacco, cotton, carpets, gums, and oil of roses. The forests are a source of wealth, and the mulberry is planted for the silkworm industry, which centres round Broussa. The mineral wealth of Asia Minor is considerable, but almost undeveloped. Chrome ore, zinc, manganese, antimony, copper, borax, corundum (emery), coal and lignite, petroleum, gold (from the ancient gold mines of Troy), silver, and arsenic are among the minerals produced. The principal manufacture is carpet-weaving. Before the War the total exports were valued at about £125,000,000 annually, and the imports at about £145,000,000 (£111 = £10). In 1913 the share of Great Britain in the import trade of Turkey was 40 per cent., in 1920 it had fallen to 29 per cent., and in 1921 to 21 per cent.

About 120 miles of railway, under French supervision, remain to Turkey in Europe. In Asia Minor the Anatolian Railways run from Haidar Pasha to Eski Shehir, Afion Karahissar, Konia and Eregli. Less important lines include the Eski Shehir - Angora, Mudania - Brussa, Smyrna-Cassaba, and Smyrna-Aidin systems. These railways have a total length of about 1,500 miles. There are electric trams in Constantinople and Smyrna.

Turkish Finances.—In 1921-22 the expenditure in the budget was placed at £127,705,104, required almost entirely for salaries and departmental expenses; the amount actually expended was £121,890,067, leaving about £6,000,000 unpaid. The ordinary revenue was derived from customs (£15,096,770), taxes in Constantinople vilayet (£13,903,035), consumption taxes (£13,278,503), and miscellaneous (£11,058,231), a total of £13,336,239. The extraordinary revenue was £19,553,121, made up principally of Régie tobacco monopoly (£2,879,084), Eastern Telegraph Company (£2,353,249), Ottoman Public Debt (£13,333,393). The total receipts for 1921-22

were thus £T22,889,661, but of this total nearly £T18,000,000 is exceptional and non-recurrent, so that the 1921-22 deficit will be more than doubled in 1922-23.

The General Debt of the Ottoman Empire amounted on March 1, 1915, to *£T170,048,107. New loans, advances, &c., issued during the war increased the total to £T488,115,647 on March 1, 1921, exclusive of indemnities or reparations due to Allied subjects. These figures are subject to modifications, no accurate accounts being available under present conditions.

UKRAINE. (Ukraina.)

President of the Soviet of People's Commissars and Commissar for Foreign Affairs, C. T. Rakovsky.

* Gold £T = 18s. at par., or 120 Piastres = £1 sterling; on Dec. 29, 1921, the exchange was 723 Piastres = £1.
 † Turkey within 1921 boundaries.
 ‡ Turkey within former boundaries.

On Nov. 21, 1917, the greater part of "Little Russia," consisting of the former governments of Chernigov, Kharkov, Kieff, and Poltava (with Ekaterinoslav and Kherson in "South Russia," and Podolia and Volynia in "West Russia"), was encouraged by Germany to declare itself independent as the *Republic of the Ukraine*. The new Republic was despoiled by Germany in 1917-18, and subsequently overrun by Bolshevik forces, and a military and economic alliance was concluded between Soviet Russia and the *Ukraine Socialist Soviet Republic* (Dec. 28, 1920). The total area of the Republic is about 174,000 sq. miles, with a population of about 30,000,000. The chief town and seat of government is Kharkoff (pop. 1914, 260,000), other large centres being Odessa, the great port on the Black Sea (with a population in 1914 of 650,000), Kieff (pop. 1914, 600,000), Ekaterinoslav (pop. 1914, 180,000), Nikolayev (100,000), Kremenchug (100,000), Poltava (85,000), Elisabetgrad (80,000), and Vinnitza (50,000). The Ukraine is the great wheat-growing district of Russia, and contains large deposits of iron ore and coal. Agriculture is the principal industry, and there are large iron and steel works. Before the War of 1914-8 the exports from the Ukraine (wheat, sugar, hides, bristles and wool) were of the annual value of about £75,000,000, and the imports (manufactured goods and machinery) about £50,000,000.

Cons.-Gen., Señor Juan Carlos Muñoz, 55-57 Chancery Lane, W.C. 2.

The smallest Republic in South America, on the east coast of the Rio de la Plata, situate in lat. 30°-35° S. and long. 53° 25'-57° 42' W., containing an area of 72,220 square miles, and a population on Jan. 1, 1918, of 1,407,247.

Uruguay resisted all attempted invasions of the Portuguese and Spaniards until the beginning of the 17th century, and 100 years later the Portuguese settlements were captured by the Spaniards. From 1726-1814 the country formed part of Spanish South America and underwent many vicissitudes during the Wars of Independence. In 1814 the armies of the Argentine Confederation captured the capital and annexed the province, and it was afterwards annexed by Portugal and became a province of Brazil. On Aug. 25, 1825, through the heroism of the 33 liberators (whose memory is perpetuated in the name of the province of *Treinta y Tres*), the country threw off the Brazilian yoke. This action led to war between Argentina and Brazil,

which was settled by the mediation of the United Kingdom, Uruguay being declared an independent state in 1828. In 1830 a Republic was inaugurated, with a Constitution of Sept. 10, 1829. The President is elected by the legislature for a term of 4 years and is ineligible for a consecutive period of office. By an amendment to the Constitution (which came into force March 1, 1919) an administrative council was appointed to share the Executive power with the President.

The country consists mainly (and particularly in the south and west) of undulating grassy plains. The principal chains of hills are the Cuchilla del Haedo, which crosses the Brazilian boundary and extends southwards to the Cuchilla Grande of the south and east. In no case do the peaks exceed 2,000 feet. The principal river is the *Rio Negro* (with its tributary the Yi), flowing from north-east to south-west into the Rio de la Plata. The boundary river *Uruguay* is navigable from its estuary to Salto, about 200 miles north, and the Negro is also navigable for a considerable distance. Smaller rivers are the Cuareim, Yaguaron, Santa Lucia, Quequay, and the Cebollati. On the south-east coast are several lagoons, and the north-east boundary crosses (the Brazilian) Lake Mirim. The climate is extraordinarily healthy, with great uniformity of temperature, the summer heat being tempered by the breezes of the Atlantic and the geographical position causing a high thermometer in winter.

Wheat, barley, and maize are cultivated, but the export is at present prohibited. The wealth of the country is obtained from its pasturage, which supports large herds of horned cattle (7,802,450 in 1916) and sheep (11,472,900 in 1916), the wool of which is of excellent quality. Gold mines exist at Cuñapirú. The exports are entirely animal products, and include frozen and preserved meat, wool, hides, horn, hair, tallow, and jerked beef; the imports are principally machinery, textiles and clothing, food substances and beverages, coal, oil, timber, fuel and bloodstock. In 1920 the U.S. sent 30·52 per cent. of the imports, Argentina 21·72 per cent., and Great Britain 17·23 per cent. The principal imports from the U.K. are woollen and cotton goods, hardware, and coals. There are 1,499 miles of railway open (1922), all in British hands, and three short lines owned by the State; and 4,850 miles of telegraph, with 19,039 miles of telephones. There were 995 post-offices, dealing with 101,638,265 letters and packets. The language spoken is Spanish.

The most northerly Confederation of South America, situated approximately between 1° 40' S. lat. and 12° 26' N. lat. and 59° 52'—73° 15' W. long. It consists of 20 States and 2 federal territories. The best authorities calculate the actual present area to be approximately 363,728 square miles. The census of 1920 gave the population as 2,411,952.

Venezuela lies on the north of the South American continent, and is bounded on the north by the Caribbean Sea, west by the Republic of Colombia (with which Republic the boundary is in dispute), east by British Guiana, and south by Brazil. Included in the area of the Republic are over 70 islands off the coast, with a total area of about 14,650 square miles, the largest being *Margarita*, which is politically associated with Tortuga, Cubagua and Coche to form the newly constituted State of *Nueva Esparta*. *Margarita* has an area of about 400 square miles.

Venezuela was visited by Columbus in 1498, and in 1499 by Alonso de Ojeda and Amerigo Vespucci, the former naming the Gulf of Maracaibo Venezuela, or "Little Venice" (on account of the Indian pile-built settlements on the coast and shores of the lake), and the name was afterwards extended to the whole of the Orinoco basin. In 1550 the territory was formed into the captaincy-general of Carácas, and the country remained under Spanish rule until the revolt under *Simon Bolivar*, a native of Carácas, who defeated the Spanish forces in the battles of Lastoguanes (1813) and Carabobo (1811), and thus secured the independence of the country. Bolivar was an untiring hero in the cause of independence, and through his efforts (and those

of his adjutant Sucre) Venezuela, Ecuador and Colombia (Upper Peru) achieved their freedom from Spain, while Peru was enabled to establish its independence in consequence of his victories. He died in 1830, at the age of 47, and his remains were re-interred at Caracas in 1842. Venezuela formed part of the Federal Republic of Colombia from 1822-1830, since which time it has been independent. There have been many revolutions since 1846, particularly in 1849, 1868, 1889, 1891, 1900, and 1908. In 1854 President Monagas liberated the African slaves, and in 1864 President Falcón divided the country into States and formed them into a Federal Republic. The present constitution rests upon the fundamental law of June 13, 1919, under which the government is that of a Federal Republic of twenty autonomous States, a Federal District, and two Territories, with a President elected by the Federal Congress for seven years.

The Eastern Andes from the south-west cross the border and reach to the Caribbean Coast, where they are prolonged by the Maritime Andes of Venezuela to the Gulf of Paria on the north-east. The main range is known as the Sierra Nevada de Merida, and contains the highest peaks in the country in Picacho de la Sierra (15,420 feet) and Salado (13,878 feet), the maritime ranges containing the Silla de Caracas (8,531 feet). Near the Brazilian border the Sierras Parima and Pacaraima and on the eastern border the Sierras de Rincote and de Usupamo enclose the republic with parallel northward spurs, between which are valleys of the Orinoco tributaries. The Sierra Parima contains Yaparana (7,175 feet) and Duida (8,120 feet), and Para Caima contains Maraguaca (8,228 feet) and Roraima (8,530 feet), the latter being on the Venezuela-Guiana boundary. The slopes of the mountains and foothills are covered with dense forests, but the basin of the Orinoco is mainly *llanos*, or level stretches of open prairie, with occasional woods.

The principal river of Venezuela is the *Orinoco*, with innumerable affluents, the main river exceeding 1,500 miles in length from its rise in the north-western mountains of the republic to its outflow in the deltaic region of the north-east. The Orinoco is navigable for large steamers from its mouth for some 700 miles, and by smaller vessels as far as the Maipures Cataract, some 200 miles further up stream. Among the many tributaries of the main stream are the Ventuari, Caura and Caroni from the south, and the Apure (with its tributary the Portuguesa), Arauca, Meta, and Guaviare from the west, the Meta and Guaviare being principally Colombian rivers. The upper waters of the Orinoco are united with those of the Rio Negro (a Brazilian tributary of the Amazon) by a natural river or canal, known as the *Casiquiare*. The coastal regions of Venezuela are much indented and contain many lagoons and lakes, of which Maracaibo, with an area exceeding 7,000 square miles, is the largest lake in South America. Other lakes are Zulía (290 square miles), south-west of Maracaibo, and Valencia (216 square miles), about 1,400 feet above sea level in the Maritime Andes. The *llanos* also contain lakes and swamps caused by the river floods, but they are dry in the summer seasons.

The climate is tropical and, except where modified by altitude or tempered by sea breezes, is unhealthy, particularly in the coastal regions and in the neighbourhood of lowland streams

and lagoons. The hot wet season lasts from April to October, the dry cooler season from November to March.

The principal imports are cotton prints and shirtings and cotton drill, mainly from the U.K., and hardware, principally from the U.S. The principal articles of export are coffee (81,552 metric tons in 1919); cacao (19,833 metric tons in 1919); goatskins, asphalt, sugar, hides, and balata. The U.S. is the principal customer.

Spanish is the language of the country.

	1919-20.	1920-21.
Revenue	£4,045,377	£3,230,127
Expenditure	2,722,621	4,065,575
Debt (Dec. 31, 1921)	4,942,185
Total Imports	11,037,078	7,485,228
Total Exports	9,014,441	4,662,338
Imports from U.K.	2,661,857	1,470,276
Exports to U.K.	638,886	523,109

The exchange at par = 25'25 Bs. = £ sterling. Average exchange in 1921, Bs. 23'25 = £1; rate in Aug., 1922, Bs. 25 = £1.

CAPITAL, Caracas. Population (1920), 92,212; other principal towns are Maracaibo (46,706), Valencia (29,466) and Barquisimeto (23,943).

FLAG: Three horizontal bands, yellow, blue, red (with seven white stars on blue band).

BRITISH LEGATION.

British Envoy Extraordinary & Minister Plenipotentiary, H. H. D. Beaumont (1916) £2,500
Chaplain (Hon.), Rev. S. P. Hendrick, M.A.

WHITE RUSSIA.

President of the Soviet of People's Commissars and Commissar for Foreign Affairs, M. Tchervyakof.

The independence of White Russia was recognised by Soviet Russia in 1919, and a military and economic alliance was concluded Jan. 16, 1921. The independent republic covers the former government of Minsk and parts of Vitebsk and Moghilef, and its area may be estimated at 55,000 sq. miles, with a population of about 6,000,000. The political neighbours are Lithuania and Poland, on the west, and the Ukraine, on the south. The capital is Minsk (pop. 120,000). Although bound by treaty to Soviet Russia, there is a political tendency towards the Baltic States, and fusion with these is a possible result of the movement.

CAPITAL, Minsk. Population, 120,000.

YUGO-SLAVIA.

(Kraljevina Srba, Hrvata i Slovenaca.)

King of the Serbs, Croats, and Slovenes, Alexander, born, Dec. 17, 1888, acceded, Aug. 16, 1921, married, June 8, 1922, Princess Marie of Rumania.

Premier (Jan. 1, 1921) and Foreign Affairs, M. Pachitch.

Minister in London, Dr. M. Gavrilovic.

Legation, 195 Queen's Gate, S. W. 7.

1st Secretary, M. K. Fotie.

2nd Secretary, M. Slobodan Jovanovic.

3rd Secretaries, M. Stefanovic; M. V. Milanovic.

Attachés, M. M. B. Gavrilovic; M. V. Andjeikovic.

Military Attaché, Col. G. Ostojic, C.V.O.

The Kingdom of the Serbs, Croats, and Slovenes is an outcome of the War of 1914-1918, through the fusion of the Kingdoms of Serbia and Montenegro with the Yugo-Slav districts of Austria-Hungary. The area and population of the new kingdom are approximately as under:—

District.	Sq. Miles.	Est. Pop.
Serbia	34,500	5,000,000
Montenegro	5,800	500,000
Croatia and Slavonia.....	16,418	2,700,000
Banat (part)	6,000	800,000
Bosnia	16,233	1,630,000
Herzegovina	3,527	270,000
Carniola (part)	2,500	350,000
Styria (part)	1,900	350,000

Total..... 86,878 11,600,000

The political neighbours are the Republics of Austria and Hungary on the north, Albania and Greece on the south, Bulgaria and N.W. Greece on the east, and, on the west, the "buffer state" of *Fiume* and the Adriatic Sea. This "buffer-state" has been constituted by agreement with Italy, and has a special status.

In 1913 Serbia, as a member of the *Balkan League* (Bulgaria, Greece, Serbia, and Montenegro), waged a successful war against Turkey, and enlarged her boundaries; but in August, 1913, Serbia and Greece were attacked by Bulgaria, their former ally, owing to disputes concerning the division of the spoils. The second war collapsed in a few weeks through the threatened intervention of Rumania, and ended in the *Treaty of Bucharest* (Aug. 7, 1913), by which the whole of "Old Serbia" (the greater parts of the Turkish vilayets of Macedonia) were included within the Serbian boundaries. The assassination of the Austrian Heir Presumptive (June 28, 1914) brought about an invasion of Serbia by the forces of Austria-Hungary and resulted in the War of 1914-1918, during which the whole country was overrun by the forces of Austria, Germany, and Bulgaria. On Aug. 28, 1916, the Serbian Parliament met at Corfu, but in Oct., 1918, the Serbian armies were again in occupation of Nish, and on Nov. 3, 1918, the capital was re-occupied.

Old Serbia has no seaboard, but the whole coast of Croatia, Dalmatia, and Montenegro is included in the Yugo-Slav Kingdom, and access is thus possible to the Adriatic at any point of the littoral of these territories. By a convention with Greece of May, 1914, similar access is obtained to the port of Salonika, on the Aegean. The bulk of the trade before the Great War was with Austria. There were (1913) 980 miles of railway, and (1914) 2,820 miles of telegraph line, with 1,560 post-offices and 2,325 miles of telephone line.

The Army on a peace footing consists of 30,000 officers and men, the war strength being about 250,000.

The religion of the state is Greek-Orthodox. Primary education is free and nominally compulsory, but the attendance does not exceed

25 per cent. of the young. The State also maintains Secondary and Girls' High Schools. The University is at Belgrade.

Montenegro (*Tzrna-Gora*) was formerly a province of the old Serbian Empire which came to an end after the battle of Kossovo in 1389, since which date it has always claimed to be independent, and it was recognised to be so by the *Treaty of Berlin* (July 13, 1878). It has an area of 5,800 square miles (including the territory acquired from Turkey in 1913) and a population estimated at 500,000. On Nov. 29, 1918, the National Skupshchina deposed King Nicholas (who had reigned since Aug. 28, 1860), and a decision was made to reunite Montenegro with Serbia. King Nicholas died on March 21, 1921, and the union of the country with Yugo-Slavia is now an accomplished fact. The chief town is Cetinje (pop. 5,000) and the ports are Antivari and Duleigno.

Croatia, Slavonia, &c.—On Oct. 30, 1918, at the dissolution of the Austro-Hungarian Kingdom, the National Assembly of the former Hungarian provinces of Croatia and Slavonia proclaimed the complete independence of those provinces, and a National Council was established, to which representatives of other Slav States (Boznia, Herzegovina, and parts of Austria and Hungary) were admitted. On Dec. 29, 1918, a Ministry was formed for the Serb, Croat and Slovene Kingdom, in which representatives of Croatia and Slavonia were included.

Finances of Yugo-Slavia.—The budget of 1922 balanced at 6,257,800 *dinars* for revenue and expenditure. The *dinar* at par is equivalent to the franc, £1=25.25 *dinars*; the exchange of 1922 is shown on p. 439. The value of the imports far exceeds that of the exports.

Belgrade (*Beograd* = White Fortress), at the confluence of the Save and Danube, is a modern city, with electric tramways and light, and wide streets; it contains the university, the national museum and library, and the old Turkish citadel; the population of Belgrade was about 120,000 in 1922. Other towns are Zagreb (Agram) 80,000; Liubliana 60,000; Sarejevo 50,000; Novi Sad 40,000; Nish 25,000.

CAPITAL, Belgrade.

FLAG: Red, blue, white.

BRITISH LEGATION.

ANIMALS ON THE STAGE.

A SELECT Committee of the House of Commons was appointed on July 12, 1921, and re-appointed on February 22, 1922, to enquire into the conditions under which performing animals are trained and exhibited, and to consider whether legislation is desirable to prohibit or regulate such training and exhibition, and, if so, what lines such legislation should follow. General interest in this question has been aroused, both in this country and abroad, with the result that certain exhibitions have been brought into disfavour, and audiences of animal acts rendered very critical. Evidence of cruelty was laid before the Committee by representatives of animal protection societies, persons associated with the stage, and private persons; rebutting evidence was given by trainers, exhibitors, and proprietors of theatres and circuses. The Committee in their report stated that they were convinced that there have been in the past, and certainly still are, many cases of ill-treatment and wanton cruelty in the training and performances of animals, but they also realised that in the large majority of cases the best results obtained in training are effected by kind and patient treatment. Generally speaking, the evidence before the Committee tended to show that there had been a marked improvement in the care and treatment of animals during recent years. The Committee were of opinion that the exhibition of all performing animals should not be prohibited; but they recommended:—

(a) That a Committee of Supervision should be appointed consisting of a Chairman and four members to be appointed by the Home Secretary, two members by animal protection societies and two members by the profession, and should have power to increase their numbers to 13 in like proportion; and that this Committee should have the power of prohibiting, restricting, suspending or modifying any performance, or training of animals for any performance, which they consider undesirable on the ground of cruelty to the animals.

(b) That all persons who train animals for public exhibition or performance, and the places where they train them, should be registered.

(c) That a representative of each county council, the officers of the R.S.P.C.A., and the police should have access at all times, without giving previous notice, to the training places and the performances.

(d) That the Committee should have power to prohibit the performances of animals trained abroad in the cases where, in their opinion, the conditions of their training involved cruelty.

(e) That the training and performances of all chimpanzees and of all anthropoid apes should be prohibited.

(f) That the training and exhibition of all the larger carnivora should have the special attention of the Committee.

(g) That the use of mechanical and other appliances in the execution of conjuring tricks, which involve cruelty, should be prohibited.

(h) That the penalties for cruelty to animals should be revised and increased.

BUILDING SOCIETIES.

CONSIDERABLE demands have been made upon Building Societies since the War by persons desiring to obtain houses in which to live. Purchase, with the help of a mortgage, has been one

of the comparatively sure ways of securing a residence, but in view of the inflated values, Building Societies have wisely decided to limit the percentage of loan to a much lower figure than previously. Membership has grown from 679,749 in 1919 to 754,766 in 1920, and the number of properties mortgaged from 200,000 to 229,000. The income of the Societies in 1920 was stated to be £48,625,000. Building Societies have been exempted from the Corporation Tax until Dec. 31, 1925. A meeting of the Building Societies' Association was held at Margate in August, 1922, with Mr. E. Hill in the Chair.

CO-OPERATION.

THE Co-operative Union in Great Britain and Ireland consists of about 1,300 Societies with an aggregate membership of 4,500,000. The 54th Annual Congress was held at Brighton, June 5 to 7, 1922. Miss L. Davies, the first lady President, took the Chair, and 1,400 delegates were present. Labour made another attempt to capture the Congress. The proposed Co-operative College was required by the Labour wing to be worked in conjunction with Ruskin and Labour Colleges, but the delegates decided to keep it under the control of the Co-operative body. In regard to the proposed new daily paper, the Congress decided to keep the project in the Co-operative movement rather than have a joint organ with the Trade Union Congress and the Labour Party. Resolutions were passed upon extension of national education, amendment of Old Age Pensions Act and a review of the work of the International Co-operative Alliance. The 1923 Congress will meet at Edinburgh during Whit-week.

WOMEN'S CO-OPERATIVE GUILD.

The 39th Annual Congress of the Women's Co-operative Guild was held at Portsmouth on June 20 and 21, 1922, with Mrs. Dewsbury in the Chair. Six hundred and eighty-eight Delegates, representing 1,022 branches and 51,000 members, attended. Resolutions were passed welcoming the formation of an International Women's Co-operative Committee as a step towards the International Guild, urging the Co-operative Movement to redouble its energies to secure a Labour and Co-operative Government, protesting against economies in education, demanding removal of restrictions upon Local Authorities in house building, and calling for extension of the Rent Restrictions Act. Cardiff will be the venue for the 1923 Congress.

CHESS CONGRESS SUCCESS.

THE most important chess meeting ever held in England was opened at the Central Hall, Westminster, on July 31 last. Great public interest was shown in the meeting, particularly in the International Masters' Tournament, and the hall was crowded with chess enthusiasts during the three weeks play lasted. In addition to the Masters' Competition there were Women's Open, Major Open, Minor Open and other tournaments. The entries of Masters were the best in any International contest since the London Tournament of 1899, and included Alekhine (Russia), Atkins (Great Britain), Bogoljubow (Ukraine), Capablanca (Cuba), the world's champion, Euwe (Holland), Maroczy (Hungary), Marotti (Italy), Morrison (Canada),

Reti (Czecko-Slovakia), Rubenstein (Poland), Tartakower (Ukrania), Vidmar (Jugo-Slavia), Wahlutuch (Great Britain), Watson (Australia), Yates (Great Britain), Znosko-Borovsky (Russia). Dr. Lasker was the most notable absentee. The full results in the Masters' Tournament are tabulated as follows:—

Player.	Capablanca.	Alekhine.	Vidmar.	Rubenstein.	Bogoljubow.	Reti.	Tartakower.	Maroczy.

CO-PARTNERSHIP.

PROGRESS in the direction of the sharing of profits in an establishment between the proprietors and workpeople still continues to be slow. At the end of 1921, it was believed officially that 201 firms with 288,852 workpeople permanently employed had schemes of profit-sharing or co-partnership in operation, and in the first nine months of 1922 three of the above number had been abandoned and two others begun. Only 169 firms made financial returns of the schemes, and the amount of bonus so paid during 1921 was stated at £750,090 amongst 118,440 employees. Gas Companies are chief supporters of co-partnership, with 32 profit-sharing gas companies concerning 37,767 workpeople.

DISARMAMENT.

FOLLOWING the work of the Washington Conference on Naval Armaments in 1921, much discussion has taken place during the past year on important matters connected with the question of disarmament, which it is hoped will lead to important practical results in the not distant future. A specially appointed Commission of the League of Nations has devoted much time to the consideration of various proposals, among which may be mentioned—(a) A scheme known as the Esher scheme for the reduction of land armaments by fixing the army of each nation at an agreed maximum, represented by a certain number of units, each unit consisting of 30,000 men. (b) A scheme suggested by Lord Robert Cecil, the basis of which was a mutually defensive guarantee by all members of the League coupled with a general reduction of armies. (c) A scheme put forward by Admiral Seagrave proposing an extension of the principles of the Washington naval agreement to all naval powers. (d) The abolition of the manufacture of arms by private enterprise. The most far-reaching of these proposals is the scheme suggested by Lord Robert Cecil, than whom no one has done finer work for the great cause of disarmament, and much time was devoted to the consideration of his proposals. The French representative on the Commission expressed general approval of the scheme, but suggested as a first step a mutually defensive treaty which would specify the contribution each nation would make in case of need for defence against an aggressor, to be followed later by disarmament proposals. As a compromise it was agreed that the proposal should be that a guarantee treaty should be worked out in detail, but should only take effect when armaments are reduced. Later the question of reparations and war debts was raised. A series of resolutions were eventually agreed to by the Commission and embodied in a report which was carried to the Assembly of the League of Nations. Some notable speeches were made during the discussion of the report, after which the Assembly passed a number of most important resolutions, calling for (a) an international conference to extend the Washington naval agreement to all naval powers; (b) a conference of all nations on the private manufacture of arms; (c) the preparation by a Commission of the League of a draft treaty embodying the scheme for reduction of armaments coupled with guarantees for mutual defence against aggression. Further the Assembly expressed the opinion that the reparations problem must be solved before the disarmament scheme can be carried out, and resolved to take up the consideration of the question if the next Allied Conference fails to settle it.

EVEREST UNCONQUERED.

THE reconnaissance carried out during 1921 by the expedition under the leadership of Colonel Howard-Bury determined the one possible route of approach to the summit of Mount Everest (see p. 843 of the 1922 "WHITAKER"). A strong expedition was sent out early last year, thoroughly organised and equipped for the purpose of making the attempt to reach the summit, under the leadership of General C. G. Bruce, a veteran Himalayan climber. A large quantity of stores and equipment was despatched in advance of the expedition to Phari Dzong, which was reached

by the expedition, which started from Darjeeling, early in April. Base camps were established on the slopes of Mt. Everest, and early in May four of the climbers started to make a reconnaissance for sites for camps at the foot of the North Col. The reconnaissance was carried out satisfactorily and three camps were formed, No. 1 at a height of 17,600 feet, No. 2 at 19,360 feet and No. 3 at about 21,000 feet; Camp 3 forming the advance base of operations and storing food for the climbers and a large number of porters, together with a full alpine kit and the large oxygen plant with which the expedition was provided. The first attempt to reach the summit was made by Messrs. Mallory, Somervell and Norton. After camping at 25,000 feet on May 20, and spending a night there, they reached a record height of 26,800 feet the following day, without using oxygen, after undergoing great hardships and suffering badly from frost-bite. While this attempt was being made, Mr. Finch and Capt. Bruce moved up to Camp 3 to make another attack on the summit, with the aid of oxygen. The following night was spent in a terrific snow-storm, and after this had abated, the two climbers started again, finally reaching an altitude of 27,300 feet, when the violent winds and intense cold forced them back. The final effort, which ended in disaster, was made by a party who left the main base camp on June 3. This party consisted of Messrs. Mallory, Somervell and Finch, Wakefield, Crawford and Morris, with native porters. Finch was forced to stop at Camp 1, which was reached after a heavy snowstorm which lasted for 36 hours. Camp 3 was reached on June 5, and the next day the party set out with the 14 porters, carrying food and the oxygen apparatus, which it was intended to use only on the highest slopes of the mountain. Half way up the North Col an avalanche caught the party and buried seven of the porters, the Englishmen and the rest of the porters narrowly escaping with their lives. Following this catastrophe, the monsoon caused the final abandonment of the attempt to reach the summit. All the members of the expedition suffered terribly from the effects of the altitude, and the winds and cold. At Camp 3 the thermometer fell to 29° below zero and on the warmest night registered only 1° above zero. Despite all the difficulties, the explorers are of opinion that with better weather than they experienced, the summit can be reached.

FOOTPATH RULE.

A DETERMINED effort was made at the beginning of July last by the London "Safety First" Council to alter the rule of the pavement in the Greater Metropolitan area from "keep to the right" to "keep to the left." The Council, which is composed chiefly of representatives of municipal authorities and traffic concerns, was formed in 1916 with the object of endeavouring to diminish the number of street accidents in Greater London. It is stated that the Council's investigations show that nearly one-third of the accidents to pedestrians are directly attributable to the custom of walking to the right of the pavement; owing to the rule of the roadway being to drive to the left, pedestrians temporarily stepping off the footways are in grave danger of being hit from behind by on-coming traffic. As pointed out by the Council, a huge expenditure would be necessary to alter the rule of the roadway to "drive to the right," as is the

rule on the Continent and in America. This would involve alteration of all tramway points, the construction and entrance to all public vehicles, the steering gear position on all motor vehicles, and alteration to many horse-drawn vehicles, and the consequent changes in statute at present laying down the left as the correct rule of the road. It was deemed advisable therefore to make a great effort to alter the custom of the footpath to "walk to the left," a change which has already been introduced by many provincial municipalities. The views of the local authorities in Greater London were invited, with the result that 65 of them passed resolutions in favour of the change, including 24 out of the 28 metropolitan borough councils. Of these 65, about 40 agreed to exhibit "walk on the left" notices throughout their areas on July 1, whilst the remainder before taking this step wished to be assured that the action would be supported by the majority of authorities in Greater London. The Ministry of Transport and all the national organisations of local government authorities expressed themselves in favour; but the Commissioner of the City Police was opposed to the suggested change.

The response to the requests was not satisfactory; and although the instruction was at first obeyed fairly widely in some districts, the old habit of walking to the right soon re-asserted itself, and it would appear clear that the desired change will only be brought about by further persistent efforts on the part of the "Safety First" Council and the local authorities. The question was raised in Parliament as to whether the Home Office would be willing to authorise the police to assist in recommending the change, and the reply was that at present the Home Secretary was not prepared to recommend the police to take any action in the matter.

FORESTRY POLICY AND PROGRESS.

THE depletion of our timber reserves during the War has emphasised the value and urgency of afforestation from the point of view of national defence as well as of economics. Action has been taken by Parliament in establishing the Forestry Commission in 1919 and voting a fund of £3,500,000 to be devoted to the development of forestry and forest industries over a period of years. In the year 1920 a grant of £470,000 was made to the Commissioners for their operations, but owing to financial stringency the grant for 1921 was reduced to £200,000. In their first year of working, ended September 30, 1920, the Commissioners acquired 33,628 acres, of which 6,684 acres were purchased and 26,944 leased. In the second year 14,068 acres were purchased and 19,893 acres leased. The immediate objectives of the forest policy on which the Commissioners are working are summarised by them in a recent report as follows:—

- (1) The afforestation of 150,000 acres of new land by direct action of the State.
- (2) Assistance to local authorities and private owners for the afforestation or re-afforestation of 110,000 acres.
- (3) The purchase and reconstruction of hardwood areas.
- (4) Education of forest officers, landowners and land-agents, working foresters and foremen.
- (5) Research and experiment.
- (6) Encouragement of forest industries.

With regard to State forests, the programme of planting of conifers proposed by the Acland

Committee and the Commissioners' revised programme are as follows:—

Year.	Acland Committee's Programme.	Commission's Revised Programme.
	Acres.	Acres.
1st year, 1919-20	Nil	1,600
2nd " 1920-1	3,300	5,700
3rd " 1921-2	6,700	8,100
4th " 1922-3	10,000	11,500
5th " 1923-4	13,300	14,800
6th " 1924-5	16,700	...
7th " 1925-6	20,000	...
8th " 1926-7	23,300	...
9th " 1927-8	26,700	...
10th " 1928-9	30,000	...
Total	150,000	...

The areas actually planted with conifers by the Commission were in the first year 1,296 acres and in the second year 6,105 acres. It is proposed that 20,000 acres suitable for hardwoods shall be acquired; and up to September 30, 1921, nearly 400 acres had been planted. The terms under which advances may be made to local authorities and private owners under the Forestry Act of 1919 have not proved attractive, and no progress has been made with this section of the scheme. But during the winter of 1921-22 the Commissioners, by the Forestry Act, 1921, were enabled to make grants to landowners and corporate bodies for planting schemes, on condition that unemployed labour was utilised, and this scheme was highly successful. Employment was given at 500 centres, and about 11,000 acres were planted, a similar acreage prepared for planting, and 4,000 acres of scrub were cleared. Unfortunately for the progress of the forestry scheme, the Government decided not to use this method to meet unemployment during the winter of 1922-3.

HOSPITALS' FUTURE.

THE Departmental Committee appointed by the Minister of Health in 1921 "to consider the present financial position of voluntary hospitals and to make recommendations as to any action which should be taken to assist them," have, during the past year, issued their final report. In their interim report the Committee stated that they were convinced that it was desirable in the public interest to preserve the voluntary system of hospital management, and in order to meet the serious deficiencies of income with which many hospitals were faced, they suggested that the schemes to be submitted to the Minister of Health by approved societies under the National Health Insurance Acts for the disposal of their surplus funds, estimated at not less than £7,000,000, should provide for a substantial part of this surplus to be allocated to contributing towards the cost of maintaining members of the societies in hospitals. In their final report, the Committee made suggestions as to the measures which might be voluntarily adopted by hospital managers for the improvement of the financial position of the hospitals under their charge. These related to reduction of expenditure, accounts, co-operative buying, appeals for donations, contributions by wage-earners and employers, contributions by approved

societies, payments by patients, staff funds, &c. Further recommendations were made by the Committee, among which are the following:—

(1) That a Hospitals Commission for Great Britain be set up primarily to administer the temporary grant suggested by the Committee. It should be appointed by the Minister of Health, and should consist of not more than 12 members, of whom three should be elected by the Minister and one by the Secretary for Scotland, and of the remainder one should be nominated by each of the following:—The Joint Committee of the Red Cross Society and the Order of St. John of Jerusalem, the Council of King Edward's Hospital Fund, the British Hospitals Association, the Royal College of Physicians, the Royal College of Surgeons, the British Medical Association, and the Scottish Committee of the latter.

(2) That Poor Law Guardians be authorised to enter into arrangements as to the use of infirmaries.

(3) That County Councils be empowered to contribute to the expenses of Voluntary Hospitals Committees.

(4) That failing the provision in the National Health Insurance Acts of a "hospital benefit," the Courts be authorised to award to hospitals compensation under the Employers' Liability and Workmen's Compensation Acts.

(5) That local authorities be authorised to pay the cost of the treatment in hospitals of persons in their employ.

(6) That all contributions by employers to hospital funds be allowed as deductions from profits for income tax purposes.

(7) That where the payment to a hospital of a testamentary gift of residue is delayed for more than a year, the hospital be authorised to claim repayment of income tax.

(8) That legacy and succession duty on testamentary gifts to hospitals be remitted.

HOUSING.

BUILDING PROGRESS.

GOOD progress was made with the provision of houses during the past year, but a great shortage of accommodation still exists. During the financial year 1920-1 the cost of building rose to such a height that the Government, in July, 1921, decided to limit the amount of building to be undertaken at the expense of the Exchequer (see p. 839 of the 1922 "WHITAKER"). It was hoped that such limitation in conjunction with the general tendency to deflation in the price of commodities would in due course secure such a reduction in the cost of working-class houses as to pave the way for the resumption of unsubsidised building by private enterprise. This limitation has been followed by great reductions in the cost of building, but it cannot be said that up to the present it has resulted in private builders erecting houses for the working-classes to rent. Whilst the houses erected by local authorities have been built to let—not invariably to persons of the working-class—those erected by private builders have been built with a view to immediate sale. The reduction in the cost of building is shown in the following table, which gives the average amounts of the tenders accepted by local authorities for houses of the "parlour" and "non-parlour" types. The parlour type contains a parlour, living room, three bedrooms, scullery, bathroom with w.c., coal shed and

larger, and the non-parlour type has the same accommodation excluding the parlour.

	Parlour Type.	Non-Parlour Type.
	£	£
Year 1920-1	944	855
April, 1921	798	697
June, 1921	792	693
September, 1921	659	594
December, 1921	566	514
March, 1922	513	436
June, 1922	422	379

The factors which have contributed to this great reduction in costs are reduced wages, cheaper materials (due partly to the collapse of rings in the building trade), smaller profits, and a great improvement in output on the part of the workers. The houses completed at the end of the financial year 1921-2 numbered 130,335, of which 56,908 had been erected by local authorities, 3,608 by public utility societies, and 29,819 by private builders. On March 31 last there remained 75,484 houses to be erected under the Government scheme of 1921 by local authorities and public utility societies, and of these 52,417 had already been commenced. In addition, preliminary certificates had been issued in respect of 12,295 houses to be erected by private builders. On August 1 last the total number of houses finished by local authorities and public utility societies was 129,791, and under the private builders' subsidy scheme a further 38,604 had been provided.

RENTS.

One of the most difficult problems connected with the Housing question during the past few years has been the regulation of rents. The first Rent Restrictions Act, passed in 1915, allowed no increase on the pre-War standard rents; the Act of 1919 allowed a 10 per cent. increase in the case of houses not exceeding certain specified values, but before this increase became operative the Government appointed a Committee to inquire into the whole question of rent restriction, and the Act of 1920 was passed, which allowed increases equivalent to 40 per cent. of the standard rents. Of this 40 per cent., 25 per cent. was in respect of increased cost of repairs, 10 per cent. was in respect of the permitted increase of the rate of mortgage interest, and 5 per cent. was to allow an increased interest on the capital invested by the builder or owner not covered by mortgage. These increases were in accordance with the recommendations of the Committee which sat in 1920 under the chairmanship of Lord Salisbury. With regard to repairs, it was estimated that at March, 1920, they cost two and a-half times as much as they did before the War, and that, therefore, an increment of one and a-half times the pre-war cost should be allowed for and added to the net rent. (The pre-war cost of repairs was taken as being about one-sixth of the net rent; one and a-half times this amounts to one-quarter, or 25 per cent., of the net rent, which is the increase the Act allowed.) In a great many cases this increase has not been accompanied by the execution of repairs by landlords at the pre-war standard, either internally or externally. This factor and the fall in the cost of repairs since

1920 will doubtless enter into a consideration of the percentage increase to be allowed after June 24, 1923, when the Act of 1920 expires. The working of the Act has brought other questions into consideration, e.g., sub-letting by tenants; the provision of alternative accommodation; the rights of the one-house owner; premiums; the rate of mortgage interest, etc. The Committee appointed by the Government to advise what steps should be taken to continue or amend the Act have ascertained authoritative opinions upon these and other points by means of a comprehensive questionnaire which was circulated throughout the country to local authorities and organisations and interests concerned with the Act. At the time of going to press the Committee had taken no oral evidence. It is probable that the Committee will make an interim report advising continuance of the Act in some form, leaving details of any suggested amendments to a later report.

GARDEN CITIES.

The Garden City idea has not made as great an advance as its advocates would have wished since the Letchworth experiment demonstrated the advantages of this method of dealing with the housing problem. The Garden City idea is that new houses, instead of being added to the towns, should be built to create new cities, scientifically planned and constructed, either in entirely new areas, or, as at Letchworth, out of the old villages and small towns; and that industries should be attracted and agriculture developed so as to make these cities self-contained, but with fairly easy access to the larger towns. Such decentralisation of industry, it is claimed, is more desirable than the extension of existing industrial areas, as it would simplify many problems of transport, cheapen production, and very largely increase the well-being of the community. State aid was made available to assist Garden City schemes by the Housing Act of 1922, section 7 of which authorised the Public Works Loan Commissioners to make advances to "Authorised Associations" up to an amount approved by the Treasury. The Welwyn Garden City Company, Ltd., is the first authorised association to receive Government assistance, and they have received a first instalment of loan amounting to £117,000 from the Public Works Loan Commissioners. To carry out what is the second enterprise on Garden City lines, the Company have acquired an estate of about four square miles in Hertfordshire and intend developing on its central area an entirely new town, leaving the rest of the estate as an agricultural belt. At the end of June last, leases had been granted upon 51·7 acres of land in the residential area for the building of 354 houses, and sites had also been let for industrial and commercial purposes. Houses are being built by private persons for their own occupation and by builders for sale, and Public Utility Societies have built houses for sale and on a tenancy-investment basis. It is expected that a population of about 40,000 will eventually be housed in this Garden City. Closely allied to the principles of the Garden City are the ideas underlying the policies of Town Planning, already dealt with by the Legislature, and Zoning, which up to the present has received no legislative notice in this country, but which has long been the subject of statutory enactments abroad, notably in Germany and the

United States. On March 31 last the total number of local municipal authorities which had proposed or were engaged in the preparation of town planning schemes was 167, the total area covered by these schemes amounting to 744,222 acres.

LABOUR.

COMMUNIST PARTY OF GREAT BRITAIN.

THE actual size of the Communist Party is not known, but it includes most of the advanced Socialists in Great Britain and Ireland, who are followers of Lenin. A Conference was held at St. Pancras, London, March 19 and 20, 1922, at which 200 delegates attended, with Mr. Arthur MacManus in the chair. The Press was not admitted to the discussions. The object of the Party is "extending the solidarity of the working class toward a world revolution." The Party hoped by affiliating with local and national Labour Parties to "make the political organisation of Labour an instrument of political progress."

GENERAL FEDERATION OF TRADE UNIONS.

The 23rd Annual Conference of the General Federation of Trade Unions opened at Dumfries on July 13, 1922. The membership consisted of 126 trade unions with an aggregate roll of 1,371,634, these figures showing a decrease of 8 and 211,424 respectively. The Federation is not so much a political body as a mutual insurance concern amongst certain unions for help in time of trade disputes. The G.F.T.U. is of opinion that the membership of unions will decrease still further owing to the general poverty and the fact that the Government has become responsible for many of the benefits usually provided by unions in the form of unemployment and sick pay.

INDEPENDENT LABOUR PARTY.

The 30th Annual Conference was held at Nottingham, April 16 to 18, 1922, with R. C. Wallhead (re-elected for 1923) in the Chair and 300 delegates in attendance. The financial report of the National Administrative Council was regarded as too pessimistic by the delegates. Application for affiliation to the Communist Party was rejected and a resolution was carried unanimously against a Labour and Liberal coalition. A majority vote was carried against Prohibition, but a motion in favour of Local Option was shelved. The Party is in favour of nationalisation, but seeks it by methods different from those of the Social Democratic Federation and the Labour Parties.

LABOUR DISPUTES.

With the exception of the engineering and shipbuilding trades, 1922 has been (to Oct. 31) an unusually quiet year in labour disputes. Strikes may have been numerous, but mainly they have been not only of short duration but affecting small numbers of people. The main factor has been wage and bonus reductions. The shipbuilding industry was at a standstill because the men refused to accept a cut of 16s. 6d. weekly, and the way out was found by stretching the reduction over a period. The engineering dispute concerned a question of workshop practice in that the men desired to control

rather than the employers, but they failed to accomplish their end.

The figures for the past two years and for the nine months of 1922 are

	Disputes in Progress.	Workpeople involved (in '000's).	Days lost directly (in '000's).
1920	1715	2,024	27,111

Aug.	67	31	312
Sept.	61	15	142
Summary			
Jan-Sept 22	452	536	19,632

THE LABOUR PARTY.

The 22nd Annual Conference of Labour Party was held at Edinburgh on June 27 to 30, 1922, when 805 delegates attended, representing societies with a membership of 3,908,548, a decrease of 349,446 from last year's figures. Mr. F. W. Jowett was in the Chair, a position to be taken by Mr. Sidney Webb at the Conference of 1923. The most important resolution carried confined delegates to those who had accepted the constitution of the Labour Party and refused admission to anyone belonging to any body that supported a candidate not approved by the Labour Party. A proposal to reduce the interest upon War Loan was referred back by 2,226,000 votes to 1,281,000. Motions in favour of Free Trade, re-establishment of the Agricultural Wages Board, extension of the Workmen's Compensation Act, and general Nationalisation were carried. Suggestions to establish own Labour Diplomatic Service and to forbid any member of the Party becoming a Privy Councillor (3,694,000 to 386,000) were lost.

LABOUR WOMEN.

The National Conference of Labour Women was held at Leamington May 9 and 10, 1922. Miss Margaret Bondfield presided over 338 delegates, representing various Labour bodies. Resolutions were passed in favour of Endowment of Motherhood, Ratification of the Maternity and Hours Conventions adopted at the Washington Conference, Maintenance of Unemployed from National Exchequer, retention of Trade Boards, and the usual proposals of Labour Conferences.

SOCIAL DEMOCRATIC FEDERATION.

The 36th Annual Conference was held at Manchester Hotel, Aldersgate, London, August 5 to 7, 1922. In addition to the usual nationalisation resolutions, motions were passed in favour of the socialisation of hospitals, examination of milk supplies, and protesting against the abolition of the feeding of necessitous school children during holidays. The party is numerically weak, and feels the loss of its veteran founder, Hyndman. *Justice*, its weekly organ, has a sale much outside the party.

TRADE UNIONS.

A remarkable fall in the aggregate membership of Trade Unions is taking place, as may be seen from the following figures:—

Year.	Membership.	Percentage on Previous Year.
1913	4,189,000	+ 20·8
1919	8,081,000	+ 21·3
1920	8,493,000	+ 5·1
1921	6,793,000	- 20·0

The sexes are divided into :—

Males	5,760,000
Females	1,033,000

The largest decrease has been with the General Labour Unions, which show a drop from 1,353,530 to 862,645, or a loss of 36·3 per cent. Railway Unions report a fall from 618,000 to 507,000; Miners, 1,155,000 to 942,000, and Engineers and Shipbuilders, 1,148,000 to 1,014,000 during the year 1921. Reasons given for the decreases are lack of confidence in leaders, unprecedented unemployment, and inability of unions to obtain increased wages for members. Latest details of finance relate to 1920. At the end of that year 726 unions, with a membership of 7,145,000, had funds totalling £16,104,000. Their annual income was £13,091,000, out of which £6,672,000 went directly in benefits. In the last eight years the actual ratio of funds per member has remained almost stationary at £2 5s.

TRADE UNION CONGRESS.

The 54th Congress met at Southport, Sept. 4 to 9, 1922, under the Chairmanship of Mr. R. B. Walker, of the Agricultural Workers' Union. Comparative Statistics :—

	1921.	1922.
Societies represented...	171	159
Delegates...	810	716
Society membership ...	6,390,523	5,065,170

The falling off of membership was due almost entirely to drop in Trade Union support. On an omnibus proposal of a joint defence of Trade Union standards at time of labour disputes, the previous question was carried by 3,576,000 to 1,205,000. Responsibility of the *Daily Herald* was accepted in agreement of annual increase of levy of 2d. per member. Age 70 was decided upon as retiring age for all Congress officials—this affected Mr. Bowerman, M.P., Secretary. Resolutions carried included a demand for revision of the Versailles Treaty, Trade with Russia, Unemployment Relief schemes, formation of National Guild Council, Adequate Housing scheme, Agricultural Wages Board, Extension of 44-hour working week, Mothers' Pensions, and protests against reduction in Education Estimates, and a suggested annulment of Trade Boards. A monthly meeting of the General Labour Council is held by the Trade Union Congress and the Labour Party. In September a very energetic protest was made against any war in the Near East, and by a careful selection of previous resolutions of the deputation to the (then) Prime Minister, the Council members were placed in an invidious position.

LONDON CENSUS.

AMONG the changes of the intercensal period 1911-1921 the most striking is the increase in the preponderance of women, due in part to war losses among the male population. At the date of the census there were in the county 341,365 more women than men. When the census was taken on June 19 the total population of the administrative county was 4,484,523. This is a

decrease on the figures for 1911 of 37,162, due to the outward drift which has been in progress for two decades. Modern London has, however, long outgrown the county boundary, and in the wider area comprising the metropolis the rise in population has continued unchecked. Within the limits of Greater London the growth followed that of the county very closely between 1801 and 1851, and has considerably exceeded it ever since, the total figure of 7,480,201 for 1921 being the highest yet recorded. As compared with the whole of England and Wales, the rate of growth in Greater London was greatly in excess up to 1901, which year appears to have marked a turning-point in its special development, the rate of progress since that date being increasingly less than that for the rest of the country. The figures for each census since 1801 are as follows :—

Date of Census.	Administrative County.	Outer Ring.	Greater London.
1801	959,310	155,334	1,114,644
1811	1,139,355	184,544	1,323,899
1821	1,379,543	216,798	1,596,341
1831	1,655,582	248,170	1,903,752
1841	1,949,277	286,067	2,235,344
1851	2,363,341	317,394	2,680,735
1861	2,808,494	414,226	3,222,720
1871	3,261,396	624,245	3,885,641
1881	3,830,297	936,364	4,766,661
1891	4,227,954	1,405,852	5,633,806
1901	4,536,267	2,045,135	6,581,402
1911	4,521,685	2,729,673	7,251,358
1921	4,484,523	2,995,678	7,480,201

PREPONDERANCE OF WOMEN.

A notable feature of the tables is the preponderance in the number of women in the great majority of the metropolitan boroughs. Further, the effect of the war is shown in the fact that, while in nearly all districts the number of women has increased in the inter-censal period, in several boroughs the male population was substantially lower in 1921 than in 1911. For London as a whole the figures are :—

	Males.	Females.	Total.
1911 ...	2,126,341	2,395,344	4,521,685
1921 ...	2,071,572	2,412,944	4,484,523

Dec. 54,762 Inc. 17,600 Dec. 37,162

HOUSING CONDITIONS.

Much valuable information has been collected by the Registrar-General concerning London's dwellings and housing conditions. In the sub-joined table the main results are summarised and compared with the position in 1911 :—

	1911.	1921.
Structurally separate dwellings—		
Occupied	678,712	705,450
Vacant	47,260	18,969
Private families	1,023,951	1,120,897
Excess of private families over occupied dwellings	345,239	414,447
Average No. of private families per occupied dwelling	1·51	1·59
No. of persons per occupied dwelling	6·66	6·35

The increase in the average number of families per occupied dwelling arises from the fact that whereas the number of private families has increased by 9·5 per cent. in the decennium, the growth in the number of occupied dwellings

has been 4·1 per cent. only, or less than half. An analysis of the dwellings, according to the number of rooms they contain, yields the following results:—

Three rooms or less	18·1 per cent.
Four-five rooms	27·2 per cent.
Six-eight rooms	42·3 per cent.
Nine rooms or more	12·4 per cent.

But although the number of families has increased, the average size of the family has been reduced from 4·15 persons in 1911 to 3·79 persons in 1921, a drop of 9 per cent. On a general average of rooms per person, therefore, the London population is less densely housed than in 1911. This is further evidenced by the following comparison between 1911 and 1921 of the families living under the overcrowded conditions of two or more persons per room. It will be seen that the actual number of families and persons and the proportion of the total population living under such conditions is reduced:—

	1911.	1921.
Families living more than two persons to a room	121,591	110,451
Population in such families	758,438	683,498
Percentage to total population	17·8	16·1

LONDON GOVERNMENT. THE ROYAL COMMISSION.

MUCH progress has been made during the past year by the Royal Commission appointed towards the end of 1921 "to enquire what, if any, alterations are needed in the local government of the Administrative County of London and the surrounding districts, with a view to securing greater efficiency and economy in the administration of local government services, and to reducing any inequalities which may exist in the distribution of local burdens as between different parts of the whole area." The case for the extension of the boundaries of the Administrative County of London—which date from 1855—was presented to the Commission on behalf of the London County Council by Mr. R. C. Norman, Vice-Chairman of the Council's Local Government Committee, and some of the Chief Officers of the Council. At present such services as water supply, police, and main drainage are carried out for areas which include large parts of Extra-London in common with London itself, and it was urged that it is desirable that a much larger area than the Administrative County of London is necessary to ensure the efficient administration of other services, such as housing and town planning, traffic regulation, education, etc. The need for some measure of equalisation of rates was also laid before the Commission. As regards the suggested enlarged London area, the representatives of the London County Council did not definitely commit themselves to a boundary, but they put forward much evidence relating to the area of Greater London. This area covers 692·9 square miles, the Administrative County being 116·9 square miles in extent, and the Extra-London district 576 square miles. It was suggested that the new Central Authority should administer certain important central services and should act in co-operation with a number of large, strong and independent local

throughout Greater London such as the London Labour Housing and Town Planning Institute of British Architects Association, etc., and the before them the views of Much of the evidence of has been in general opp put forward by the Lo Many conflicting views ha various points, but no gen policy, alternative to th Council, has emerged wh the Council, calls for th information was availab going to press as to the by the Royal Commission evidence of all the author

NEW COUNTY

London's new County H King on July 17 last, His Majesty had laid the scheme for the County H London County Council in sanction was given in 19 the site on the south side eastern end of Westminster preliminary to the utilis the construction of an en ing which the foundati formed with a raft of Po Upon this the substruc reaching to the ground flo ed. This was completed superstructure of seven f in the latter part of 19 part of the northern wi been postponed for a tim cost. An estimate for th based on prices obtaini amounted to about £38 expenditure on the wo follows:—

Building	

Total.

The building when co long, with an average w 300 feet. The architect be best described as a Renaissance adapted to a great number of offices a considerably in size and ment of the crescent, feature of the river front central block, Belvedere location of the more imp with the Council's work, itself forms the exact façades of the building a stone on a substructure covering is of red tiling English manufacture. O building the two baseme storage floors; the fin

about 60 feet across, provides accommodation for 200 members and has galleries for the press and public. The decorative work is of a magnificent character, many beautiful varieties of marble having been used. The corridors and lobbies round the Chamber and the main entrance hall and ceremonial staircase are also treated lavishly in marble. The other corridors on the principal floor are lined with oak panelling, with a vaulted ceiling in plaster. The office floors, which are plain in design and devoid of decoration, afford accommodation for over 2,000 officials.

LORDS' REFORM. GOVERNMENT PROPOSALS.

THE question of the reform of the House of Lords has again assumed importance by reason of the formulation of the Government proposals during the past year. The preamble to the Parliament Act of 1911 stated that "it is intended to substitute for the House of Lords, as it exists, a Second Chamber constituted on a popular instead of hereditary basis." In 1917 Lord Bryce's Committee, after an exhaustive enquiry, presented a report on the subject, but it was not until July of last year that the Government introduced its proposals in the Upper House in the form of resolutions "on which to found a Bill for the Reform of the House of Lords." These resolutions were as follows:—

"1. That this House shall be composed, in addition to Peers of the Blood Royal, Lords Spiritual, and Law Lords, of—

(a) Members elected, either directly or indirectly, from the outside.

(b) Hereditary Peers elected by their order.

(c) Members nominated by the Crown, the numbers in each case to be determined by statute.

"2. That, with the exception of Peers of the Blood Royal and the Law Lords, every other member of the reconstituted and reduced House of Lords shall hold his seat for a term of years to be fixed by statute, but shall be eligible for re-election.

"3. That the reconstituted House of Lords shall consist approximately of 350 members.

"4. That while the House of Lords shall not amend or reject Money Bills, the decision as to whether a Bill is or is not a Money Bill, or is partly a Money Bill and partly not a Money Bill, shall be referred to a Joint Standing Committee of the two Houses, the decision of which shall be final. That this Joint Standing Committee shall be appointed at the beginning of each new Parliament, and shall be composed of seven members of each House of Parliament, in addition to the Speaker of the House of Commons, who shall be *ex officio* Chairman of the Committee.

"5. That the provisions of the Parliament Act, 1911, by which Bills can be passed into law without the consent of the House of Lords during the course of a single Parliament, shall not apply to any Bill which alters or amends the constitution of the House of Lords as set out in these resolutions, or which in any way changes the powers of the House of Lords as laid down in the Parliament Act and modified by these resolutions."

Much criticism was directed against the proposals during the debate in the House of Lords, particularly with regard to the vagueness of the

proposal dealing with the composition of the Second Chamber and the proposal for the settlement of disputes in connection with Money Bills. Further it was claimed that the Government had almost entirely ignored the recommendations of Lord Bryce's Committee. At the time of the Dissolution the resolutions had not passed through the House of Lords.

WOMEN AND THE LORDS.

The position of women with regard to the right to sit in the House of Lords has been definitely settled for the time being by the decision of the Committee for Privileges on the claim of Lady Rhondda that as a peeress in her own right she was entitled to a writ of summons to the House. The first Committee to hear Lady Rhondda's petition decided in her favour, but after reporting to the House of Lords objection was raised and a re-hearing ordered on the ground that sufficient attention had not been paid to the legal position. For the re-hearing the Committee were reinforced by an additional number of Law Lords, including the Lord Chancellor, and this Committee decided against Lady Rhondda. The Lord Chancellor gave the leading opinion of the majority of the Committee, in the course of which he said that "upon a perusal of the words in Viscountess Rhondda's Petition it was clear that, according to the ordinary principles of construction, and apart altogether from such disqualifications as were imposed by the Common Law, she was incapable of receiving a writ by reason of the terms of the Petition itself. . . . A peerage held by a peeress in her own right was one to which in law the incident of exercising the right to receive a writ was not and never was attached. A right to sit and vote was personal to the holder of a peerage who possessed it. A peeress in her own right was not a person who had an incident of peerage but was disqualified from exercising it by her sex. She was a person who for her life held a dignity which did not include the right of a female to exercise that function at all." Lord Haldane, who delivered judgment in favour of the petition, said that the initial words of the Sex Disqualification (Removal) Act appeared on the face of them sufficient to enable a woman to exercise what was obviously a public function—that of sitting and voting in Parliament. The very title of the Act showed that the removal of sex disqualification of all kinds imposed by the law was its express and general purpose. Lord Wrenbury alone was in agreement with Lord Haldane. Lords Cave, Dunedin, Atkinson, Muir-Mackenzie, Phillimore and Riddell agreed with the Lord Chancellor. Thus the position at present is that women are eligible for the House of Commons but ineligible for the House of Lords. Following the decision of the Committee for Privileges, Mr. Chamberlain, in answer to a question in the House, made it clear that the Government did not intend introducing legislation to reverse that decision.

PROPERTY LAW SIMPLIFIED.

GREAT reforms in connection with the transfer and devolution of land are contained in the Law of Property Act passed during the past year. The Act, which was first introduced in the House of Lords in 1920, is the longest measure ever passed by Parliament, comprising 191 sections and 16 schedules and running into 313 pages. The eleven parts into which it is divided are

concerned with (i) assimilation and amendment of the law of real and personal estate; (ii) amendments of the Settled Land Acts; (iii) amendments of the Conveyancing Acts; (iv) amendments of the Trustee Acts; (v) abolition of copyhold and customary tenure; (vi) extinguishment of memorial incidents; (vii) provisions respecting leaseholds; (viii) amendment of the law of intestacy; (ix) repeal and re-enactment with amendments of Part I of the Land Transfer Act, 1897, relating to personal representatives; (x) amendment of the Land Transfer Acts, 1875 and 1897; (xi) general provisions. The main object of the measure, which is the result of many years' labour of legal reformers, prominent amongst whom are Lord Haldane and the late Lord Chancellor, Viscount Birkenhead, is to facilitate and cheapen all dealings in land. The present complicated law, which is the growth of centuries of legislative enactments and decisions in the courts, is reduced to a comparatively simple code. The law of real property is assimilated to that of personal property, and all property, real and personal, will, under the new Act, descend in the same manner and under the same regulations. Far-reaching changes are made in the law relating to the descent of property. The heir-at-law and the widow's dower are abolished; and for the first time women are placed on a footing of complete equality with men in regard to succession and in cases of intestacy. The Act puts an end to relics of the feudal system, including copyhold and customary tenure, Gavelkind, Borough-English, and other local customs affecting succession. Perpetually renewable leaseholds are to be converted into long terms, and after the Act comes into operation there will be only two systems of land tenure—freehold and leasehold. With regard to the question of general compulsory registration of title, which is in force in the County of London, this will not be extended for ten years from the commencement of the Act, and then only after an enquiry conducted by a person appointed by the Lord Chancellor. The Act, which comes into force on January 1, 1925, does not apply to Scotland or Ireland.

RECONSTRUCTION PROBLEMS.

ALTHOUGH the industrial output of Great Britain and Ireland in 1919-20 was considerably lower than in 1913, unemployment was then very small; whilst in 1922 a volume of exports not very different from that of 1920 is accompanied by severe unemployment. The reason must be found in the decline of the home trade. Britain finished the War with her territory intact, save for the damage caused by a few naval and air raids. Her manufacturing plant was better than before the War and optimism was rampant. Men with money in their pockets were still being demobilised and were not obliged to find work immediately. Employers and workmen alike thought the millennium had come, as prices were soaring although production waned, being somewhere between 70 to 80 per cent. of pre-war output. High wages and short working days reduced output per hour but gave big profits on a small production. Shipbuilding for British owners was active, making up for war-time losses, without considering the world's needs. Great schemes for new industrial undertakings were launched, and they were not stopped at once, as the effects of the 1920 Budget

were not immediately felt. Continental buyers were obliged to pay any price asked, especially for coal, steel, and machinery, and freights rose to enormous levels, the total earnings of shipping for 1920 being estimated at £440,000,000. The nation was living up to its income, believing that the boom would last several years. Extra staffs, extra wages, extra expenditure on organisation and advertisement, were cheerfully paid out of Excess Profits Duty, and available capital was used at home. In 1920, of new issues totalling £384,000,000, £331,000,000 were invested in Great Britain and Ireland. In fact, the significant feature of the 1919-20 boom was the attention paid to the home market. The nation is now resuming its pre-war habit of measuring national prosperity in terms of external trade, but it is generally conceded that greater efforts on the part of all classes might result in a considerable extension of the home market, particularly in the building, clothing, furniture, and motor trades.

ROAD TRAFFIC FIGHT.

FOLLOWING the failure of the Railway Companies to get a clause inserted in the Railways Act of 1921 giving them power to run road transport services, a Bill was promoted during the past year by the North Western and Midland Railway Group seeking powers to enable the Group to carry goods by road. The promoters also proposed to ask for powers to convey passengers and their baggage by road, but did not proceed with this proposal. A vigorous debate took place on the second reading of the Bill, and by a majority of five—146 against 141—it was passed and referred to a Select Committee of the House of Commons. Strong opposition to the proposals was shown by the motor transport companies and organisations representing all kinds of trading and manufacturing interests. It is stated that there are now some 3,000 road transport companies in Great Britain, with a capital of 100 millions and about 600,000 employees. The cost of motor traffic is between 10s. and 12s. per ton cheaper than carriage by rail, and it is contended that if the railway companies were empowered to use the roads for carrying goods, they would be able to cut rates so as to drive the road companies out of business and secure a monopoly of goods traffic by road and rail. The London Chamber of Commerce opposed the Bill, on the ground that its proposals were not in the public interest, and suggested that if any powers were granted to the railway companies they should be limited to special areas defined by the Ministry of Transport. Opposition was also expressed by the Federation of British Industries, the National Union of Manufacturers, the National Chamber of Trade and other organisations, on the ground that the grant of the powers sought would lead to the railway companies securing a monopoly of the transport of the country. After the Select Committee, to whom the Bill was referred for consideration, had sat for ten days, the Ministry of Transport objected to the method of charging road rates proposed in the Bill, and expressed the opinion that charges should be identical for identical services whether rendered by road or rail or both. The promoters thereupon withdrew the Bill. In their report the Select Committee, after criticising the delay on the part of the Ministry of Transport in notifying their objection, stated that "the case for the

petitioners was not fully before the Committee, but, subject to the possibility of eliminating unfair competition, the Committee are unanimously of opinion that it would be in the public interest to allow the fullest possible participation by the railway companies of this group and all competitors in the service of road transport."

RURAL INDUSTRIES.

THE Rural Industries Intelligence Bureau offers skilled advice in the establishment of rural industries. A selling agency (County Industries Co-operative Society, Limited, of Westminster Bridge Road, London, S.E. 1) exists to supply raw materials and to market the rural manufactures. The Bureau has the support of the Development Commissioners and receives a grant from the Treasury. The Bureau is controlled by a Committee from Government Departments, with five trustees appointed by the Ministry of Agriculture.

SHIPPING OUTLOOK.

THE total of new tonnage to which classes have been assigned by the Committee of *Lloyd's Register* during the year ended June 30, 1922, amounts to 623 vessels, of 2,523,992 tons gross, a reduction of 22 per cent. on the figures for the preceding twelve months. This tonnage is, however, well in excess of the highest figure recorded (in 1913-14) in pre-war years.

The Society's returns show, further, that at the end of June last 464 vessels, of 2,010,912 tons gross, were being built throughout the world under the Special Survey of *Lloyd's Register*, with a view to classification in the Society's Register Book. Included in this total, however, were 526,592 tons upon which work was suspended for one reason or another, so that the tonnage to be classed by the Society actually under construction at that time was approximately 1,484,320 tons gross. In view of the exceptional paucity of new orders during the past year, this figure is likely to suffer further reduction, unless an early stimulus to international trade should be forthcoming.

The countries in which the majority of the 623 vessels classed by *Lloyd's Register* during the year have been built, are shown by the following statement:—

Where Built.	No.	Gross Tons.
United Kingdom	406	1,536,423
United States of America	45	286,539
Netherlands	44	159,184
Japan	26	152,524

The nationality of the principal proprietors of the new tonnage is more widely distributed, as will be seen below:—

Where Owned.	No.	Gross Tons.
United Kingdom	307	1,089,574
Netherlands	50	248,400
United States of America	37	231,133
Japan	26	152,524
Italy	22	144,400
France	34	137,332
Norway	30	135,432
British Dominions	35	125,853

SMOKE PREVENTION.

THE indiscriminate and wasteful use of raw coal for all purposes, industrial and domestic, and the lax administration of the law by the responsible authorities, have combined to produce a state of smoke pollution of the air in

this country which is discreditable to a highly civilised community. Such is the opinion of the Departmental Committee appointed by the Ministry of Health to enquire into the question of smoke prevention. The most serious results of this pollution of the air are the danger to health and damage to property; but, apart from this, the waste of fuel alone is enormous. It has been estimated that in Great Britain $\frac{2}{3}$ million tons of potential fuel in the form of soot escape annually into the atmosphere from domestic fireplaces, that is more than half the total amount of fuel required to heat the Metropolitan area for a whole year. In addition, the loss from industrial chimneys amounts to 500,000 tons. At £2 per ton, this represents a total annual waste of £6,000,000. With regard to the public health, statistical evidence shows a close relationship between the death rate and atmospheric conditions, and the health of urban communities is most injuriously affected by the loss of sunlight due to coal smoke. Something like 20 per cent. more sunshine is experienced in the country than in a smoky town. Members of the Departmental Committee on Smoke and Noxious Vapours Abatement who visited Germany in the latter part of 1921 reported that the amount of atmospheric pollution in comparable districts is very much less than in this country.

The legislature has long regarded the emission of black smoke from locomotives, manufactories, and trade processes as a nuisance, but there is no law touching the emission of domestic smoke. The Departmental Committee were of opinion that, although amending legislation is necessary, the chief requisite is the enforcement of the provisions of the existing law, strengthened and altered as regards its administration. In their report, the Committee stated that the great majority of local authorities throughout the country had failed to do their duty, and that in many parts the law is practically a dead letter. Important suggestions and recommendations were made by the Committee with regard to the nuisance of domestic smoke, and in connection with industrial smoke they recommended *inter alia*, "that the general legal obligation on all manufacturers, users and occupiers of any business premises or processes, engines or plant of any description whatever, should be to use the best practicable means, having regard to all the circumstances of the case, for avoiding the pollution of the air by smoke, grit, or any other noxious emissions; that the same law should also apply to all Government establishments, and all rail and road locomotives, and motor-cars of whatever weight and type, and to steamers on rivers, estuaries and lakes." A Government Bill was introduced at the end of July last, but many recommendations of the Committee were not included therein, particularly those relating to private dwelling houses.

SUMMER TIME CURTAILED.

WITH the expiration of the Act passed during the War which authorised the fixation each year by Orders in Council of the period of Summer Time, it became necessary to introduce fresh legislation during the past year. The duration of Summer Time in each year since the passing of the Act in 1916 has been as follows:—

1916.....	May 21 to October 1.
1917.....	April 8 to September 17.
1918.....	March 24 to September 30.
1919.....	March 30 to September 29.

1920.....March 28 to October 25.
 1921.....April 3 to October 3.
 1922.....March 26 to October 8.

The late start in 1916 was due to the fact that the Act authorising the change was not passed till May of that year, and the late termination in 1920 was due to a prolongation for four weeks owing to the dispute in the coal industry. Objections to the continuation of Summer Time have been made in various quarters, the chief protests being concerned with the effects on agriculturists and school children. It would appear from the investigations of the Board of Education, who consulted education authorities throughout the country, that there is no reasonable ground for assuming that the custom of altering the clock has had any widespread harmful effect upon children. A small fraction of parents have doubtless not adapted themselves to the new idea, but education authorities generally have expressed themselves in its favour. Strong opposition to the Act has been shown by the farming community, and it is contended that the dairy farmer and the market gardener especially have a very genuine grievance. On the other hand, nearly 300 local municipal authorities throughout the country, many Chambers of Commerce, the Early Closing Association, and other organisations have expressed themselves against any curtailment of Summer Time. The debate in Parliament on the new Bill disclosed a marked difference of opinion between the representatives of the towns and those of the rural districts, the former generally supporting the measure and the latter demanding its withdrawal or a drastic curtailment of the Summer Time period. After a long discussion in the House of Commons some concession was made to the farmers, and Summer Time for 1923 was fixed to start on the day following the third Saturday in April and to end on the day following the third Saturday in September, a reduction of six weeks compared with the 1922 period. An amendment moved by the Home Secretary provided that the Act should "continue in force until December 31, 1923, and no longer, unless Parliament otherwise determines." In answer to a question, the Home Secretary said it was impossible to say what were the Government's future intentions with regard to Summer Time.

SUNDAY GAMES.

THE question of permitting the playing of games on Sundays in the parks under the control of the London County Council was raised during the past summer on a motion of Mr. W. C. Johnson that the Council's Parks Committee should "consider and report as to allowing as an experiment in selected parks and open spaces a certain amount of Sunday play under suitable conditions." A large number of petitions and communications were received by the Council from associations of various kinds and from individuals urging reasons for and against the granting of facilities for games on Sundays. The opposition was based chiefly on religious grounds and on the ground that the playing of games would interfere with the quiet enjoyment of the parks and open spaces by those who do not desire or are unable to avail themselves of the facilities for playing games, and who would have to bear the greater cost of providing such facilities. On the other hand, the executives of

various working lads' and girls' institutions were strongly in favour of facilities being provided, on the ground that, in the absence of such facilities, the boys and girls whom the institutions are designed to benefit are driven to expend their energies in harmful pursuits. Several of the metropolitan borough councils reiterated their support of the proposal. At certain of the parks some sports have been allowed on Sundays in the past without any public protest. For instance, boating has always been allowed by the County Council in Battersea and Victoria Parks, where it had been permitted for many years before the Council took over the parks. Bathing and athletic practice have been allowed early on Sundays, and fishing, kite and model aeroplane flying, skating and tobogganning have always been allowed on Sundays in their proper season and when circumstances permitted.

The Council decided that boating should be permitted on Sundays at all parks and open spaces under their control where the necessary facilities are or may be provided; and that, provided that the convenience of the general public be not in any way prejudiced, the games of badminton, bowls, cricket, croquet, football, golf, hockey, lawn tennis, netball, quoits, &c., should be allowed on Sundays from 1 p.m. in winter and 2 p.m. in summer, until the respective closing times for such games on other days of the week. Badminton can now be played in 2 parks, bowls in 28, cricket in 8, croquet in 3, football in 21, golf in 1, hockey in 10, lawn tennis in 47, netball in 49, and quoits in 2. Following the action of the London County Council, it has been decided to allow football on Sundays in certain of the Royal Parks.

THE SIX POINT GROUP.

THE leaders in the Six Point Group are drawn from every sphere of life, and amongst the prominent advocates of the "Points" are the two women members of the House of Commons (Viscountess Astor, M.P., and Mrs. Wintringham, M.P.) and a Peeress who recently sought admission to the House of Lords (Viscountess Rhondda). The "Six Points" are:—Satisfactory Legislation

1. on Child Assaults;
2. for the Widowed Mother;
3. for the Unmarried Mother and her Child;
4. for Equal Rights of Guardianship for Married Parents;
5. Equal Pay for Teachers;
6. Equal Opportunities for Men and Women in the Civil Service.

The six points are divisible into two groups, of which one is concerned with the better protection of children (1 to 4) and the other (5 and 6) with equality of status for men and women. With regard to the sixth point, the Committee hold the view that the State is regarded as a model employer, and its example is followed by other authorities and by commercial employers. So long, therefore, as the State refuses equality of pay, so long will its example be followed throughout the country, while acquiescence by the State in equality would be followed by universal adoption of the principle.

UNIVERSITY WOMEN.

THE British Federation of University Women is an organisation existing for the purpose of linking together British University Women in all professions, promoting their interests and ex-

pressing their opinions as a whole. In accordance with these general purposes the Federation seeks to foster friendship and co-operation among its members, to stimulate their interest in municipal and public life, to provide advice and information in regard to questions of employment, and to encourage independent research work by university women. In its capacity as a member of the International Federation of University Women the Federation endeavours to promote cordial and helpful relations between university women throughout the world. The Federation has, from time to time, successfully enlisted financial and other support for objects coming within the scope of its activities, and is at present engaged in an effort to establish in London an International Hall of Residence for University women. The Federation was formed in 1910 and has a steadily increasing membership. Local branches exist at Birmingham, Bristol, Cambridge, Cardiff, Glasgow, Leeds, Leicester, Liverpool, London, Manchester, Oxford and Sheffield. The President of the Federation is Professor Caroline Spurgeon, D.Litt. The headquarter offices are at 92 Victoria Street, S.W. 1, and further information can be obtained from the Hon. Secretaries at that address.

WAGES AND PRICES.

WAGES have continued to fall during 1922, though not quite so fast as during 1921. The fall has been due to the drop in the cost of living and to the need to reduce costs of production. In 1921, the official Index Figure fell from 165 to 92 above that of the August, 1914, standard. In the same twelve months, 7,100,000 workpeople suffered wage reductions totalling £6,006,000 weekly, or nearly £1 per week per employee. The monthly figures for 1922 are

	Index Figure.	Workpeople concerned.	Weekly Reduction.
Jan.	92	4,060,000	£570,000
Feb.	88	2,400,000	390,000
March	86	1,360,000	233,030
April	82	3,350,000	693,000
May	81	2,025,000	390,000
June	80	2,000,000	390,000
July	84	2,360,000	490,000
Aug.	81	2,000,000	450,000
Sept.	79	1,300,000	297,000
(1 Oct.	78)		

The two worst paid industries are agriculture, in which the weekly wages of the labourers have fallen to £1 5s., and the miners, whose wages are back to the 1914 basis in certain places.

WELFARE WORK.

BIG establishments have come to realise that a department to deal with the human side of their employees is now an essential part of their structure, although prior to a visit of Mr. Lloyd George to a munition factory in 1915, welfare work was almost unknown in this country. Its growth is demonstrated by the 3rd Annual Congress of the Industrial Welfare Society at Balliol College, Oxford, in Sept., 1922, when Lord Inverforth presided over welfare organisers from 150 firms. The Duke of York is keenly interested in welfare work and attended a special meeting in room 14 of the House of Commons on Jan. 27, 1922, called in the interests of the welfare movement. He considered the movement helped "to influence and emphasise not the diverse but the common interests, and it

enables the two great partners in industry to approach each other in an informal and friendly way to discuss all questions of improvement."

WHIST DRIVES.

WONDERFUL developments have occurred in the old harmless game of whist. Huge meetings are held of whist players, who compete for large money prizes. Whist Drive promotion is now an industry. Money prizes from £100 downwards are competed for every evening by players who pay from 5s. to 6d. for the competition. Over 16,000 sat down at Olympia during August, each paying 5s. admission fee. During the winter of 1921-2, a Whist Championship was held in favour of St. Dunstan's and the National Institute for the Blind. About 1,000,000 players took part, and the result for the charities was a net profit of £37,000, after paying all expenses. Mr. Harvey Lloyd acted as the Chief Organiser of the Championship and the top player was Miss Rainford of Hightown, Liverpool, who won the first prize of £1,000 and a silver challenge trophy worth £50. A more ambitious Whist Championship under the auspices of the same Charities is in progress during the winter of 1922-23.

WIRELESS TELEGRAPHY AND TELEPHONY.

BROADCASTING.

THE broadcasting by wireless of news, music, lectures, weather forecasts and other matters of general interest had its origin in the United States of America, where, owing to the geographical position of the country, it was possible for war-time restrictions upon the use of private receiving sets to be relaxed at a much earlier date than in the Old World. The "boom" began in the autumn of 1921. Up to that time there were perhaps 10,000 amateur stations in America; by Christmas the number had grown to nearly 250,000, and the million mark was reached before the end of 1922. So popular has the new hobby become there that shops selling wireless goods now outnumber by three to one those which deal in gramophones. In Great Britain developments were considerably slower. The very small number of permits granted for the use of valves was gradually increased, and applicants for licences for receiving began to find that they were becoming less and less difficult to obtain. Then in April, 1923, the Postmaster-General announced in Parliament that, subject to certain necessary restrictions, anyone who desired a licence would in future be able to obtain it without the smallest difficulty. He also stated that broadcasting from seven great stations would shortly take place over the length and breadth of the country. The manufacturers of wireless goods formed a broadcasting company during August, but it needed some time and a great number of meetings with the Postmaster-General to bring into line the proposals of the company and the conditions laid down by the Post Office. In America broadcasting was financed entirely by the various manufacturing firms, who obtained in the enormous increase that took place in the sales of apparatus an ample return for the money that they had invested. The makers in Great Britain took a more conservative view, and pressed for such safeguards for the new industry as the

prohibition of the importation of foreign-made goods, and the provision of a subsidy from the money received by the Post Office in licence fees. Protracted negotiations were conducted in secrecy, and this gave rise to many rumours—"broadcasting would start next week"—"the idea of broadcasting had fallen through altogether"—"only sets of a special registered pattern would be allowed, so that those already bought would be useless"—"the use of home-made sets was to be prohibited"—and so on. The result of the long period of uncertainty was that though receiving licences were granted at the rate of about a thousand a week, wireless as a general hobby did not begin to make real headway until the autumn. It is clear, however, that the coming year will see great developments in broadcasting. The quality of the entertainments provided will be raised, and there is no reason why the world's finest musicians should not sing or play nightly to vast unseen audiences. The wireless telephone may well play an important part at times of national or international crisis. It will be possible, for instance, before the end of the year, for a Cabinet Minister sitting in his study to speak on the ordinary telephone to a broadcasting station, whence his words will be relayed on, to be heard in all parts of the country. On Oct. 7, 1922, the Prince of Wales spoke from York House to boy scouts throughout the land.

AMATEUR WIRELESS.

It is unlikely that such a thing as the relaxation of all restrictions upon the use of wireless apparatus will ever take place. Transmitting licences may be granted a little more freely, but the wireless telephone will not replace the wired instrument unless some means is found of eliminating the "jamming" that would occur if thousands of people were speaking through the ether at the same time. At present every wireless message must be broadcast so that it will affect any receiver tuned to its own wave-length, or nearly so. Some progress has been made towards confining messages to the stations for which they are intended, and mention of what is being done is made in a later paragraph. Restrictions are needed, too, upon methods of reception. Certain types of apparatus, though excellent in the hands of an expert, are not suited to the beginner or to the unskilful person. It is necessary therefore to lay a ban upon the sets that can be made to oscillate freely, for these, if carelessly handled, are liable to cause a great deal of annoyance to other people owing to the fact that they actually send out weak waves which interfere with genuine messages and signals. The attitude of the Post Office is that a distinction should be drawn between the person who uses a set, about the working of which he knows very little, purely to provide entertainment for himself and his friends, and the amateur experimenter engaged in conducting researches into wireless problems. The ordinary form of permit, then, restricts the amateur, and will probably continue to do so, to a certain general type of apparatus which is more or less fool-proof; but the man who takes up the scientific side of wireless can obtain a very much wider licence on giving proof that he is genuinely making researches. This is on the whole a very satisfactory condition of affairs, for it gives the fullest scope to the serious student, and at the same time frees the beginner from

any fear that he may have of causing unknown harm when he first tunes a wireless set.

COMMERCIAL WIRELESS.

Wireless telephony is not likely, for the reasons we have seen, to become of great use commercially in the near future, but wireless telegraphy for both long and short distance work is already an important factor in the world's system of communications, and it is destined before long to play an even greater part than it does now. Whether it will ever entirely supplant land lines and ocean cables it is difficult to say, though if its progress towards the goal of perfection continues at its present rapid rate there is every reason to believe that it will ultimately do so. It is already possible to send and receive automatically 100 words a minute, a number which will certainly be doubled in 1923. The increasing use of the valve as a transmitting agent renders it unnecessary to use such enormous power as was required in stations erected ten years ago or more, and there is no doubt that the wireless station of the future will be a much less costly affair to maintain. It is likely that there will be an international movement towards prohibiting the use of spark stations. In the United States steps have already been taken in this direction. Spark transmission produces signals of great intensity which can often be heard when the receiving instrument is tuned to quite a different wave-length. Hence they cause considerable interference and are responsible for the major portion of the jamming that occurs. When valves are employed much sharper tuning is necessary, so that several stations can work at once on wave-lengths differing by only a few metres without causing mutual interference. Long-distance wireless was severely tested in August 1922, when the transatlantic cables were put out of action during the disturbances in Ireland. Luckily, the new great station at St. Assise, which had just come into use, was able to aid existing stations in dealing with the enormous number of words that were waiting to be sent across the Atlantic. The task was successfully carried out and there was never any excessive delay. Most ships of any size now carry both transmitting and receiving sets; one has only to listen to the perfect Babel of 600 metres signals always to be heard (for that is the shipping wave-length) to realise what huge numbers of messages are constantly being transmitted between ship and ship, or ship and shore. Wireless sets of a compact and simple type are likely to be made compulsory for even quite small ships. When this is brought about the danger of collision will be very greatly reduced; whilst the sending out of storm warnings, and of sailing directions in foggy weather, will increase the safety of all shipping. The whole Empire is to be linked up by a chain of great wireless stations. Lendfield, the first of these, is already working, and the news which it transmits is regularly received in Australia.

WIRELESS DEVELOPMENTS.

The bugbear of wireless at present is the interference caused by electrical disturbances. When "atmospherics" (as they are called) are bad, receiving becomes difficult and sometimes altogether impossible. A great deal of experimental work has been done with a view to eliminating their influence, but so far no really

sound system has been found. The difficulty will be overcome in time, quite possibly before the end of 1923, and when this is accomplished the efficiency of wireless will be greatly increased. A second field of research deals with the problem of so directing wireless waves that only the receiver for which they are intended will respond to them. Both light waves and those of wireless are ether vibrations, and they have many qualities in common. Light waves can be focussed by means of lenses or parabolic mirrors into thin "pencils" such as the searchlight's beam. Wireless waves are refracted by certain substances, but the difficulty of focussing them lies in their length, which is enormous when compared with that of light waves. Experiments have been made recently with waves only one metre in length, and using these it was found possible to transmit quite selectively from London to a station in Birmingham. This is at all events a beginning, and it may well point the way to the solution of the problem of completely directional wireless. The discovery only a few short years ago of the thermionic valve, which can be used to receive, to transmit and to magnify, revolutionised wireless and made telephony through the ether a practical possibility. The valve is a very beautiful and delicate instrument, but it is comparatively inefficient, for much of the current applied to its filament is wasted in the form of light. In the near future we shall see valves that work with filaments that are barely red hot, or even perhaps quite cold. Hundreds of investigators are engaged upon the problem of perfecting the valve, and any day may bring the news of a marvellous discovery. In a very short time the clumsy and expensive outdoor aerial will be a thing of the past. Major Armstrong, an American inventor, has already devised a circuit which enables a single valve to do the work of several, and to obtain marvellous results on a small indoor aerial. The year 1923 will see the advent of receiving sets that, whilst smaller and less complicated, are even more efficient than those of to-day.

R. W. H.

WORLD FLIGHT FAILURE.

AN attempt to fly round the world was started from Croydon on May 20 last by Major W. T. Blake, Capt. N. Macmillan, and Lt.-Col. Browne, under the auspices of the *Daily News*. Lt.-Col.

Browne gave up his place to Mr. Malins, the well-known photographer, at Marseilles, in order to arrange for supplies, etc., on that part of the route between Siberia and Vancouver. The length of the route mapped out was about 30,000 miles—*via* Paris, Marseilles, Athens, Aboukir, Baghdad, Basra, Karachi, Calcutta, Rangoon, Hong Kong, Japan, Aleutian Islands, West Coast of Alaska and Canada, Vancouver, Chicago, New York, Quebec, Greenland, Iceland and Faroe Islands. Difficulties were encountered soon after the flight started, a forced landing near Marseilles putting the machine out of gear and necessitating the despatch of another plane. A long delay was caused here by the wait for the new plane and unfavourable visibility, and Brindisi was not reached till June 27. Here again delay was caused through engine trouble. Athens was reached on July 4, and a fine flight across the Mediterranean on July 6 took the aviators to Sollum—464 miles across the sea in a land machine. Thence the journey continued to Ziza, some 50 miles east of the Dead Sea, from which place the route lay over 500 miles of the Arabian Desert. After losing the track and draining the petrol tanks, which were replenished by search machines from Baghdad, this town was reached safely on July 13. The next stop was made at Basra, and from there the flight was continued to Bushire and Bundar Abbas. Karachi was reached on July 19 and Quetta on July 25, after a delay caused by mist and damage to the machine. The journey to Lahore was made on July 30, under very trying weather conditions. Bad luck continued to dog the airmen to Ambala and Delhi, reached on August 5, where they were caught in a very heavy thunderstorm. Engine trouble was experienced at Agra, and more bad weather before Allahabad was reached. On arrival at Calcutta Major Blake had to enter hospital to undergo an operation for appendicitis, and Macmillan and Malins continued the flight on a Fairey seaplane. A start was made for Akyab on the coast of Burma in stormy weather on August 18, after a forced landing on a sandbank due to engine trouble; but to the east of the Ganges estuary the engine again failed, and the airmen descended on a rough sea, from which they were not rescued until they had spent three days and two nights, without food or water, on the bottom of their overturned seaplane. This greatest misfortune caused the abandonment of the flight.

THE ELECTORATE.

OWING to the reduction in the Irish membership the electorate is smaller than at the General Election of 1918 by nearly 2,000,000. The following table shows the growth in the electorate through the extensions of the franchise under various Acts of Reform:

1832.....	(Men only)	1,000,000
1857.....	"	2,500,000
1885.....	"	5,000,000
1918.....	(Men and Women)	21,392,000

The latest official return for the United Kingdom (1920), showed the number of voters as under:

England and Wales	17,465,638
Scotland	2,306,996
Ireland	2,002,949

Total ... 21,775,583

A more recent return for England and Wales puts the number of voters at 17,657,723. The average population per member is:

England (Counties and Boroughs) ...	71,005
Wales (Counties and Boroughs)	72,099
England and Wales together	71,078
Scotland	66,862
Ireland.....	43,000

Parliamentary majorities of recent Governments:

Year.		Majorities.
1886.....	Unionist.....	114
1892.....	Liberal.....	40
1895.....	Unionist.....	152
1900.....	Unionist.....	134
1906.....	Liberal.....	356
1910 (Jan.)	Liberal.....	124
1910 (Dec.)	Liberal.....	126
1918.....	Coalition	263

THE BURDEN OF THE NATIONAL DEBT.

A RETURN published as this work goes to press shows that the aggregate gross liabilities of the United Kingdom at the commencement of the financial year 1922-1923 were £7,742,526,100. This is more than eleven times the amount of the National Debt at the corresponding period of 1914-1915, when the figure stood at £706,154,110, amounts in each case exclusive of the Public Liabilities of Local Government (County, Municipal, &c.) Authorities, whose obligations now stand at a far higher figure than formerly, but which are represented by comparatively tangible, if not always realisable, assets. The cost of the debt during the year was £338,210,700, of which interest and management absorbed £309,213,700, and £28,997,000 was utilised in repayment of principal. This compares with a cost in the former period of £24,500,000 (of which £5,228,485 was devoted to repayment of principal), or almost exactly 14 times the annual cost. If, however, the repayments of principal are omitted in each case, the annual cost of interest and management is 15 times that of the pre-war figure, on a total debt which is 11 times greater, and is 17 times the total national revenue (and expenditure) in 1914.

The most disquieting feature of the return is that although the Great War has been over for nearly four years, and that during the three completed years since the cessation of hostilities the country has been taxed to produce an average revenue of £1,328,000,000 per annum (seven times the pre-war taxation), this debt has grown during the past year by the net sum (after allowing for the sum of £28,997,000 applied in reduction of principal) of £108,377,800. The true position is even more serious, as over £150,000,000 of the "Revenue" of the year was realisation of capital in the form of war stores, &c., sold. The National expenditure therefore exceeded the income by, in round figures, over £250,000,000. It is obvious that nothing but disaster can result unless expenditure be curtailed, not only to the amount of the income, but to a figure less than the income, in order that some reduction in the amount of debt can be effected. It is equally clear that if any effective recovery in Trade—and consequently earning capacity—is to take place, the taxation must be reduced, involving a further restriction of Government expenditure. This has already been recognised in the reduction by 1s. in the £1 of the Income Tax for the current year.

The severity with which taxation presses upon industry is more easily perceived from a concrete example than from general observations. Production that is to be successful in competition for the absorption of the articles to be produced requires extensive plant, which can only be installed by the aid of capital to be sunk in the venture. Take, therefore, the case of a wealthy man, say of about 45 years of age, in the prime of life, who has acquired, or succeeded to, a capital of £1,100,000, all sunk in a highly-organised and successful industry giving employment to large bodies of men (and women), and yielding a net return of 7 per cent. The owner's normal expectation of life is about 20 years and he desires the business to continue on his death. His return on his capital and energy and foresight appears to be £77,000 per annum. Income Tax and Super-tax take at once about 11s. 3d. in the £1 of this sum—over £43,300, leaving him £33,700 per annum. But, if he and his heirs are

not to dissipate the capital, he must make provision to meet the Death Duties on this sum, calculated at 30 per cent. on the capital value for Estate Duty, and a further sum for Legacy Duty, varying from 1 per cent. to 10 per cent. according to the degree of affinity of his successor. Assume the low average of 3½ per cent. for this duty, making in all 33½ per cent. in Death Duties, or nearly £367,000. To ensure the payment at his death of this sum, and a sufficient further sum for the Death Duties thereon, he must needs pay an annual premium of about £310s. per cent. or nearly £13,000 per annum, thus reducing his income from his fortune to—in round figures—£20,000 per annum, out of which he has to pay indirect taxes and local rates, &c. These two taxes alone reduce his return on his capital, his energy, and foresight, from 7 per cent. to less than 2 per cent. Such a result is destructive of incentive to thrift and the provision of further capital, to provide in its turn further employment. *All capital is the result of somebody's savings, and savings only result from the expenditure over a given period being less than the incomes.*

CAPITAL LEVY PROPOSALS.

The desperate nature of the disease has aroused considerable interest in various suggestions of more or less desperate remedies, the most conspicuous of which has been the suggestion of a levy in some form or another upon capital. The proposal generally received support only from extremists of either a visionary or a predatory type, but in the subtle form of a levy on War Fortunes it gained more adherents than had been anticipated by those who were apparently competent to judge. The supporters of the proposal, although not carrying much weight on such matters, or representing a preponderance of public opinion, were sufficiently insistent to secure the appointment of a Committee to examine the proposals and report thereon to the House of Commons. This Committee reported, after careful examination, that the proposals were impracticable. Its proposers appeared not to have realised that what may be called "War Fortunes" had already been subjected to some such levy in the Excess Profits Duty, and that what was left to the "profiteer" had either been spent in extravagance of one kind or another or was invested, and in that form would be withdrawn from industry if it were to be confiscated. A considerable body who were in "sentimental" support of the idea of such a levy applied to War Fortunes only, would not entertain the same idea applied to a general capital levy, but the sponsors of the proposal continue to press the suggestion until it has become a political factor in the General Election now pending. In this country those propagating the idea keep to general terms and have not put forward any definite proposals as to the scale or operation of the levy and its collection. These proposals are, however, of an international character, emanating from a common source, and, through similar channels, being pressed in other countries. The proposal has attained concrete form in Switzerland, and is to be submitted to a referendum of the population at the end of 1922, or, if approved, is to become operative on the last day of the year. Briefly, the proposals, as submitted, are as follows:—(Note: the Swiss franc is translated as 25 to £1.)

All private individuals and companies are subjected to the levy, State and Municipal enterprises and funds, the Swiss National Bank and institutions of a charitable nature alone being exempt. The *paid-up Capital* of companies is exempted, but otherwise the rate on all Company funds is 10 per cent.

Fortunes under £3,200 are exempt, and an exemption for household effects, &c., up to £2,000 is allowed, but married couples' separate fortunes are to be combined for the purposes of the tax, an abatement of £1,200 being allowed for a wife, and £400 for each child under age.

Banks are to be submitted to all measures of control by the taxation authorities, and all securities must be stamped by the authorities under penalty of confiscation.

Subject to these provisions the proposed levy is to be:—

On the £		(on full amount)	
first	£		£
next	3,000 or fraction of this sum	8% =	160
	3,000	10% =	300
	4,000	12% =	480
	8,000	14% =	1,120
	12,000	16% =	1,920
	16,000	18% =	2,880
	24,000	20% =	4,800
	40,000	22% =	8,800
	40,000	24% =	9,600
	40,000	26% =	10,400
	80,000	28% =	22,400
	80,000	30% =	24,000
	80,000	32% =	25,600
	80,000	34% =	27,200
	80,000	37% =	29,600
	80,000	40% =	32,000
	80,000	43% =	34,400
	120,000	46% =	55,200
	120,000	49% =	58,800
	120,000	52% =	62,400
	120,000	56% =	67,200
On sums over this amount		60% =	..

The total sum paid under such a capital levy by the case suggested above would be £412,000. How such a sum could be withdrawn from productive occupation in the industry carried on by him without such industry being entirely ruined and all those dependent thereon being thrown out of employment, and spreading still further ruin in their turn, has not been explained, nor does it appear to be capable of explanation. Assuming, however, that such sums could be collected, our foreign creditors could not absorb these vast sums other than slowly, and to the complete demoralisation of the already badly affected rates of exchange. Any attempt of such collection would, however, result in every form of property becoming a drug on the market, and for all practical purposes unsaleable. If, on the other hand, the money were left in the business as a loan at interest from the Government this would merely increase the existing burdens on industry, or, by increasing the cost of production, narrow or destroy the market for the product.

The mere publication of the proposal has already caused a financial panic in Switzerland, particularly amongst the thrifty poor classes whom it professedly is to benefit, and it would appear that the public as a whole are seriously alarmed at the suggestion, and will reject the proposal decisively at the referendum, in which

case it is likely to disappear from the political arena in other countries in which the idea has been propagated.

The proposal is based on the fallacy—still widely held—that wealth consists largely of secret hoards of gold, or notes, or easily negotiable property, instead of the fact that capital is principally employed in financing industry, and earning its reward in common with other factors.

THE NATIONAL INCOME.

THE latest period for which the returns of the Inland Revenue Commissioners are available at the time of going to press is March 31, 1921. The net amount of Income Tax received during the year ending on that date was £340,665,338, and of Super-tax £55,668,985. This sum was received in respect of assessments on the preceding year, showing a gross income coming under view of the Department of £2,970,604,036, reduced by deductions for exemptions, repairs and reductions to an actual income of £2,547,179,823. The income upon which Tax was received, after deducting allowances, was £1,416,223,256.

The gross income coming under the notice of the Department for the year ending 31 March, 1914, was £1,167,184,229, but at that time the exemption limit was £160 as against the present £130. The lowering of the exemption limit and the rises in wages account for a total income of £863,815,869 from "weekly wage earners" alone in the latest year for which details are available. When allowance is made for this factor, and the rise in prices, it is evident from the Income Tax returns that the national income expressed in pre-war value is considerably less than it was in 1914.

The growth in the number of officials is evident from these returns, as the salaries of Government, Corporation, &c., officials of which the Department had notice, rose from £145,620,034 in 1914 to £429,248,070 in 1920.

The total cost of collecting the Inland Revenue duties rose from £2,399,813 in 1914 to £8,566,942 in 1921.

THE GROWTH OF LIFE INSURANCE.

THE Revenue returns furnish many interesting sidelights on the habits of the people. The growth of thrift in the form of life Insurance is remarkable, especially during the last two years. Life Insurance premiums are allowed, within certain limits, as deductions from income in arriving at the amount on which tax has to be paid. In six years the amounts so allowed have more than doubled. At the 31st March, 1914, the amount allowed as deductions during the preceding year was £13,304,633, and at the 31st March, 1920 (the latest date for which details are available) the amounts so allowed had grown to £21,357,870. This is a form of thrift deserving of more encouragement from the State than it receives at present, as the deduction is only allowed at the 3s. rate instead of the full (then 6s.) rate, and it bears somewhat hardly upon people who took out insurances years ago when the full deduction was allowed, and who now find themselves allowed only a partial deduction while their incomes (in purchasing power at any rate) are generally much less. Allowance at the full rate would not in any way defraud the State of its toll, as the State levies the toll in the form of death duties on the capital value of the

amount assured when it becomes payable. There is no practical difficulty in the way of differentiating between bona-fide life assurance, and short term assurances which might possibly be entered into with the object (amongst others) of evading tax. In the case of whole life assurances and long term endowments (with payment at death before the period of maturity) entered into before the War, when the deduction of full rate was allowed, the implied bargain of the State to allow the whole deduction for income in view of the levy made at death should be honoured. There is no such implication in the case of those contracted later, when the conditions were known to the insured, but it would be a wise act on the part of the State to allow the full deduction, as the encouragement of thrift was never needed more sorely than it is at present. Under present conditions the thrifty person who makes provision for his dependents by means of insurance is doubly taxed for his thrift in the very heavy death duties on the capital value of the sum assured, and the only partial allowance on income tax. There is strong ground, apart from the personal factor, for the State encouragement of thrift by life insurance, as practically all the companies competing for English business are of unquestionable stability, and have enormous funds available for investment. These funds are used to finance sound business as well as the requirements in the money market of the Government, and any growth in insurance, besides providing that personal security and incentive to personal thrift, also means further funds available for the financing of sound business and of Government requirements. The income of the purely British life insurance companies doing business in the United Kingdom alone was over £90,000,000 in 1920, and of that sum nearly £23,000,000 was available for re-investment, either in the form of net increases in the funds of the company, or of dividends and bonuses to shareholders. The State realises the importance of insurance in conducting (comparatively expensively) its insurance business, under the National Health and Unemployment schemes, as well as life and annuity business for small amounts through the Post Office, and yet discourages the great bulk of the business which might be so economically performed by the big companies to the great advantage of both the State and the individual.

CAPITAL AS DISCLOSED BY DEATH DUTIES.

THE net capital value of the property on which death duties were paid during the year ending 31st March, 1921, was £391,346,000, comparing with £298,006,000 for the corresponding period in 1914. Having regard to the increase in prices (and the year 1920-21 embraced the period of the "peak" of high prices) it will be seen that the National Capital expressed in pre-war values has diminished rather than increased. The net receipt of the duty was £47,181,000, as compared with £27,165,000, but the bulk of the increase is due to the heavier rate imposed in 1919 and the slight increases imposed in the early days of the War. The number of estates on which duty was levied during the year was 97,399, and of these 64,745, or roughly two-thirds, were under £1,000 in value. Of the remainder, 22,498 exceeded £1,000

but were under £5,000 in value, and 4,747 estates were between £5,000 and £10,000 in value. Only 6 per cent. therefore of estates exceeded £10,000 in value, while less than one-third per cent. exceeded £100,000 in value. The classification of the capital between the pre-war and the post-war periods present no particular object of interest, as the bulk of the increase is in Government securities, which would naturally be expected in view of the enormous increase in Government securities during that time.

HOUSING AND INHABITED HOUSE DUTY.

THE shortage of housing is reflected in both the Income Tax returns and the Inhabited House Duty returns. The net receipt from the Inhabited House Duty in 1920 shows a slight decline as compared with 1914, the respective figures being £1,933,898 and £1,966,987. The lowest figure for many years was reached at the end of 1918, when the receipt was £1,905,500. The income from the ownership of houses, &c., rose slightly from £228,628,670 in 1914 to £237,515,365 in 1920, which would appear to indicate a decrease in the number of houses when allowance is made for higher rentals obtained on new contracts, and for the slight increases allowed under the Rent Restrictions Acts. The total number of new houses coming within the scope of the department during the year was 5,512, of a total annual value of £111,289. Only 371 of these houses exceeded £40 per annum in gross value, so that it must be assumed that practically the whole of the remainder represented houses completed under the Government Housing Scheme. These houses are assessed on the net rental produced, and not on a valued figure based on costs, as would be the case in a house erected by private enterprise, either as a speculation or to the order of a private individual. There appears to be a prospect of the shortage being remedied by the operation of economic law as distinct from the Government "Assisted Schemes." Prices of the six or seven roomed house in the outer circle of London, as disclosed by tenders to public authorities building under the Government schemes, have dropped in the last two years from about £1,000 to about £400 per house, and private enterprise is once more in evidence. The interference of Government, while it was necessary in order to bring about some palliation of the state of things caused by the house shortage, tended at the same time to make matters worse instead of better, as it helped to prevent a free market in both the labour and material on the one hand, and in the demand on the other, as the private builder found it difficult to obtain free supplies of labour and material, and those in urgent need of houses naturally preferred to obtain one at a nominal charge as compared with the cost that would have been entailed for a house erected on economic principles. The curtailing of the Government scheme was perhaps the largest factor in the fall in prices, and with the fall in prices it then became "worth the while" of both the builder and the person desiring the house, either for occupation or investment, to get to work on more normal lines, and with the growth of competition, the housing shortage now seems well on the way to becoming remedied.

THE INCOME OF CHARITIES.

THE general financial stringency of the last few years, coupled with the serious increases in prices, has made it very difficult for our great charities, more especially the hospitals, to carry on their beneficent work, and strenuous appeals have had to be made to preserve these institutions and to carry on their work. The income of such institutions, which is exempt from income tax, is shown in the Inland Revenue report to have amounted to £14,858,572 in 1914, and £16,827,937 in 1920. When allowance is made for the new and very necessary institutions which the ravages of war made necessary, it will be seen that there is no practical appreciation of income expressed in sterling during the period, while the increased costs are known to all. The income in 1920 was actually slightly lower than in the year 1917-18, when no doubt special

appeals for war hospitals of a temporary character accounted for the increased income of that year. To some extent this shortage of income is offset during the current year by some exceptionally large bequests by wills which have become operative. Bequests, however welcome, are nevertheless uncertain in their incidence, and when received should be regarded rather as capital than as income. In this respect the big funds such as King Edward's Hospital Fund, do much to stabilise the income by regarding their funds primarily as capital, of which the income is to be distributed, than as funds available for immediate disbursement, and, by their examination into the needs of the individual institutions, tending to adjust any inequalities produced by the personal inclinations or vagaries of individuals. The principal Bequests to Charities in 1922 are shown in tabular form on pp. 458-9.

SHAKESPEARE AND STRATFORD-ON-AVON.

SHAKESPEARE (1564-1616), though uncanonised, is mainly England's patron saint. Over 200,000 visitors, from all climes and countries, yearly visit this literary shrine. High street still appears mediæval, and many oak-timbered houses attest the town's great age and dignity. This historic heart of England fitly preserves Britain's storied and stately past. Next to the Bible, Shakespeare's works, projected by Wm. Jaggard, 1623, forms the highest literary treasure, intrinsic and extrinsic, yet produced by England. The volume has been translated into almost every language and dialect.

Shakespeare's Birthplace (April 23, 1564), at Stratford-on-Avon, has been for over 200 years the goal of pilgrims. It was bought for £3,100 in 1847 and given to the nation. (Restored in 1857.) Managed by 26 Trustees (16 *ex-officio*). Holds library of rare editions, pictures, and relics. In the garden are many trees and plants named by the poet.

Clopton Bridge, built of stone, on 19 arches, about 1490 by Sir Hugh Clopton, Stratford native, and Lord Mayor of London.

Guild Chapel and Guildhall.—Built A.D. 1296. In the old hall young Shakespeare could witness strolling companies performing (mentioned in Records). In chapel were discovered beneath whitewash, 1804, mural allegorical paintings, done by mediæval priests.

Hall's Croft.—Unaltered old-timbered residence of Susanna, poet's daughter, wife of Dr. John Hall, churchwarden and poet's executor.

Harvard House.—Built 1596 by Alderman Thomas Rogers, whose descendant (John Harvard) founded Harvard University, U.S.A.

Hathaway Cottage.—At Shottery, one mile from Stratford, is the little thatched farmstead, the undisturbed birthplace of Anne Shakespeare, poet's wife, who bore him three children, Susanna, Hamnet, and Judith. Contains curious Tudor and Jacobean furniture. National property, controlled by Birthplace Trustees.

King Edward VI. School.—Founded by Thomas Jollyffe, priest, in Henry VI. reign; incorporated by Edward VI. Here Shakespeare acquired his "little Latin, less Greek," and matchless English.

The Shakespeare Memorial.—Mainly due to munificence of C. E. Flower (1830-92) and his wife. Group comprises *Library*, with 10,000 volumes of Shakespeare editions and ana including rare Wm. Jaggard collection, printed about 1600 by the poet's chosen publisher. His descendant, Capt. W. Jaggard (Curator of the Memorial Library) issued in 1911 an English Bibliography of Shakespeare, recording 37,000 entries, of which the largest extant collection is at Birmingham. *Gallery* of pictures (including unique "Droeshout" portrait). *Museum* of antiques and relics (including Irving collection). *Lecture rooms*. Tower, affording views of 50 miles. *Gardens*, and *Statuary* (Lord Ronald Gower's gift). *Theatre* (800 seats) holding recurring festivals of the poet's dramas with varying programme daily. Recently nine different plays were given in six days. Special celebrations and performances, with floral procession to tomb, mark the birthday, April 23, each year.

New Place.—Site of the poet's retirement. Shakespeare bought this estate in 1597; retired to it about 1610; died there April 23, 1616. House was rebuilt about 1700, and demolished by Francis Gastrell, the iconoclast, 1759.

The Cage.—For 36 years the home of Judith, poet's younger daughter, who married Thomas Quiney, vintner.

Town Hall.—Erected 1633; rebuilt 1768. Contains details of the unbroken sequence of Bailiffs and Mayors since A.D. 1292 (including the poet's father, John Shakespeare). Exhibits: Gainsborough portrait of Garrick; four Corporation Maces, gilt silver of 15-16th Century, and ancient Corporate Sword.

Trinity Church.—Dates from A.D. 692. Of cathedral-like proportions. Shelters remains of poet and family.

NOBEL PRIZES, 1921 and 1922.

Various awards have been made since the list on p. 592 was printed. The 1921 prize for *Physics* has been awarded to Professor Albert Einstein; *Chemistry* to Professor F. Soddy (Oxford); the 1922 prize for *Physics* to Professor Niels Bohr, and the 1922 prize for *Chemistry* to Dr. F. W. Aston (Cambridge). The 1922 *Literature* prize has been awarded to Jacinto Benavente, the Spanish Dramatist.

ACCOUNTANTS.

Chartered.—To become a Chartered Accountant it is necessary to be articled to a practising member of the Institute of Chartered Accountants in England or Wales for 5 years, or 3 years if the candidate be a University graduate. Minimum age 16. Premium, say, from £100 upward; in the case of a large firm of high repute several hundred pounds are usually required. A proportion of the premium is sometimes returned by way of salary during the term of service. A Preliminary Examination (fee 2 guineas) must be passed, exemption from which is allowed (fee 1 guinea) to University graduates and those who have passed certain other examinations. Numerous Chartered Accountants' Students' Societies are in existence, holding lectures and debates, and with technical libraries of educational volumes; membership is advisable. For the Intermediate Examination, held in London twice a year, an articled clerk is eligible on completing 2½ years' service (1½ for graduates), and for his Final at the end of his term: fee for both, 2 guineas; for admission as an Associate 10 guineas, and 10 guineas on admission as a Fellow. The Offices of the Institute are in Moorgate Place, E.C. 2. In Scotland (190, West George Street, Glasgow), and in Ireland (4, College Green, Dublin), the course is similar, but not identical. There are variations in the examinations and exemptions, and apprenticeship fees are lower.

Incorporated.—The Society of Incorporated Accountants and Auditors (London, Manchester, Glasgow, Dublin and Belfast) likewise requires the passing of 3 Examinations—Preliminary (1 guinea), Intermediate (1½ guinea), and Final (2 guineas). Exemption from the Preliminary is granted to those who have passed approved Examinations of equal calibre. Offices, 50, Gresham Street, E.C. 2.

Associated.—The London Association of Accountants (Temple Chambers, Temple Avenue, E.C. 4) consists of Members, Associates and Fellows. Associates have to pass an Intermediate and Final Examination.

WOMEN ACCOUNTANTS AND AUDITORS.

The Society of Incorporated Accountants and Auditors admit women on the same terms as men, both as Associates and as Fellows.

ACTUARIES.

"An official in an Insurance Office whose duty it is to compile statistical tables of mortality and estimate therefrom the necessary rates of premium, &c., or one whose profession it is to solve for Insurance Companies or the public all monetary questions that involve a consideration of the separate or combined effect of Interest and Probability in connection with the duration of human life, the average proportion of losses due to fire or other accident, &c." Such are the functions and duties of an Actuary as described by the latest edition of the Oxford Dictionary. To become an Actuary an aspirant should obtain an appointment in the Head Offices of a large Insurance Company and study as a probationer of the Institute of Actuaries (Staple Inn Hall, Holborn, W.C. 1), concurrently (entrance fee half-guinea, annual subscription half-guinea). The First Examination, held every May, is for admission as a Student, and is followed by two others for Associateship and two others for Fellowship (fee for each part, 1½ guineas; for a section of a part, 1 guinea).

Candidates for the First Examination who are not probationers must have passed already one of certain other examinations. As Students of the Faculty of Actuaries in Scotland applicants are received on the recommendation of two Fellows. Particulars from the Secretary, 14, Queen Street, Edinburgh.

ADVERTISEMENT EXPERTS.

The growth of Advertising has increased the opportunities and raised the status of Advertisement Agents, Canvassers and Copy-writers, the vocation of all of whom is open and may be entered without examination, fees or apprenticeship. A situation once obtained in the Advertisement Office of a newspaper or magazine, or of an Advertising Agency, the factor of success (subject to perseverance and good behaviour) is the possession of certain specific abilities, without which it is not to be expected. There is wide scope in the Advertisement world for artistic skill, in the provision of illustrations and posters, and in the effective display of printed matter.

ADVOCATES (SCOTLAND).

An Advocate is the Scottish equivalent of an English Barrister. The common course is to obtain entrance to the Faculty of Advocates after graduating in Laws at Edinburgh or Glasgow. Entrance to the Faculty is preceded by a general Examination, except in the case of University graduates. The Private Examination in law may be undertaken one year after admission, the Public Examination following. From beginning to end fees come to about £340.

AGRICULTURISTS.

Agriculture on scientific lines is the subject to-day of greatly increased consideration. The Board of Agriculture, Universities and County Councils operate and co-operate in the provision of educational facilities. Practical expert advice is available in every branch. Farm Schools and kindred Institutions are in existence in various parts of the country. Degrees, diplomas and certificates are granted by Oxford, Cambridge and Leeds Universities, and the University Colleges at Reading, Bangor, Aberystwith, and the Armstrong College at Newcastle-upon-Tyne; also at a number of other Agricultural Colleges and Training Institutions. Courses vary from a few weeks at a time to a 3 years' University course for a degree. Farms and plantations are in association on which practical work is done. Fees are low, but, being variable, should be ascertained. An advisable procedure for a youth who means to go "on the land," and get his living out of it, is for him to serve as a (premium-paying) pupil on a well-established and well-worked farm, taking advantage during his pupilage of the College or other technical educational resources that will be available; but no one should adopt the career who is not sure of adequate capital. Colonial expansion has increased the openings for Agriculturists overseas.

WOMEN AGRICULTURISTS, &c.

Although the "Army of Land Girls" was mobilised soon after the War, many continued their occupation and there are openings for recruits. A thorough training is essential, and degrees may be obtained at Universities or diplomas from the British Farmers' Association, the National Dairying Association or the Royal Horticultural Society. At least two years' previous training is required, and for agri-

culture, part of this period is spent on farms, while all horticultural training may be gained at a college. During the War, the work of women among the cattle, horses and sheep was admittedly successful, the percentage of death of lambs, foals and calves being exceptionally low where women were employed.

ARCHITECTS.

The Royal Institute of British Architects desires to obtain for all those entering the profession a systematic course of education tested by progressive examinations, the passing of which forms the primary qualification for admission to its class of Associates. Associateship being the entrance class of Membership, the Royal Institute requires as the qualification for its evidence of a sound general technical education. It has, therefore, encouraged the foundation and growth of schools of architecture in various parts of the country, and when these schools have reached a standard approved by the Royal Institute, certain of their courses have been "recognised" as affording evidence on the part of those who have successfully graduated in them, that they have reached the standard of general and technical education required, or have attained a stage towards it. A pamphlet has been published recently by the Royal Institute containing full particulars of the channels through which Membership of the R.I.B.A. may be gained, together with a list of the "recognised schools," and the special exemptions which have been granted to candidates who take certain of their courses. The pamphlet gives concise information on the three stages, namely, Registration as Probationer, Student and Associate, which a candidate has normally to pass to obtain the Associateship, R.I.B.A. The Pamphlet may be obtained at the R.I.B.A., 9, Conduit Street, W. 1, at the price of 1s., exclusive of postage. The Society of Architects (28, Bedford Square, W.C. 1) has likewise done a good deal to conserve the dignity of the profession. It has 2 examinations, for Membership and Graduateship, conducted yearly in London and provinces. For the first, candidates must have been Architects' pupils for 3 years, or satisfy the Examiners that they have had adequate architectural training.

WOMEN ARCHITECTS.

The profession has recently opened its doors to women, many of whom are studying for the examinations. There are good openings for highly qualified women, especially in the planning of interiors of dwelling houses.

ARMY AND ROYAL AIR FORCE.

Full and exact particulars concerning conditions of admission to the Royal Military College at Sandhurst and the Royal Military Academy at Woolwich are published by authority, and are procurable through any bookseller, as are also particulars regulating the gaining of commissions by University candidates. Candidates for Sandhurst must be 17 years of age and under 19½; for Woolwich 16½ and under 19½. For King's Cadets, Honorary King's Cadets, King's Indian Cadets, Honorary King's Indian Cadets and Pages of Honour special regulations apply. Commissions in the regular Army are obtainable at a later age by officers of the Auxiliary forces. Much expense is saved by enlisting as a private. Pay and conditions of service in the ranks have improved and promotions from them have in-

creased. Special rules and conditions regulate the Royal Air Force.

AUCTIONEERS AND ESTATE AGENTS.

To become an Auctioneer or an Estate Agent, it is not necessary but it is advisable to hold the certificates granted after examinations by the Auctioneers' and Estate Agents' Institute (34, Russell Square, W.C. 1). Candidates for the Preliminary (fee 1 guinea) must be 16 years old; passing this is the qualification for Studentship. It is held in London once a year. Those who have already passed certain examinations are exempted. For the Intermediate (Licentiate) the age of 19 must have been reached; those eligible must be students of the Institute or articulated clerks or have been employed for at least 3 years without articles in the offices of an Auctioneer, Estate Agent or Valuer, or be in practice for themselves, singly or in partnership, or employed as Auctioneers, Estate Agents or Valuers by Government or a Corporate body. Fee 2 guineas. The Final (Associateship or Fellowship) may be passed by any Licentiate, but no one is admitted to Associateship unless or until he is 25, or to Fellowship until he is 30. Fee 3 guineas. There is likewise a direct Final Examination, for which anyone aged not less than 25 is eligible, but he must be 25 before he can be admitted to Associateship or before he can be admitted as a Fellow. Fee 5 guineas. Cost of apprenticeship ranges from about 100 guineas to about 300 guineas. For his annual licence an Auctioneer pays £10.

WOMEN AUCTIONEERS AND ESTATE AGENTS.

The conditions and fees are identical with those for men candidates.

BANK OFFICIALS.

Forms of application for admission are obtainable from the Banks. No premium is required from successful candidates; the examination they must pass is within the compass of a boy of ordinary education, and salary starts at once from about £50, with an annual increase. At several of the Indian and Chinese Banks (offices in London) salary begins at from £80 to £100. It is a standing rule with many Banks that a clerk may not marry till he is receiving £150 a year. To fit himself for the better appointments it is well for a Bank Clerk to join early the Bankers' Institute (34, Clement's Lane, E.C. 4), which provides excellent facilities for technical education. The Institute holds 2 examinations yearly—Preliminary and Final—in London and throughout England and Wales. Entrance fee nominal.

WOMEN BANK CLERKS

Although the number of women employed in Banks during the War has considerably diminished, there are still many women Bank Clerks. Only the well-educated have much chance of permanent success in this employment, and a knowledge of foreign languages is a valuable asset. Promotion, however, is very slow. Women clerks enter at 17 or 18, and the hours compare favourably with those of other callings. The Institute of Bankers admits women as members, and it is advisable for women clerks to enter for the examinations held at the Institute.

BARRISTERS.

To be eligible for admission to one of the four Inns of Court—Inner Temple, Middle Temple,

Lincoln's Inn and Gray's Inn—a candidate must, unless he be an ex-solicitor of not less than 5 consecutive years' practice, have taken a degree of any University in the British Dominions approved by the Council of Legal Education; have passed the Examination for the Indian Civil or the Consular Service, Army or Navy Commission or Eastern Cadetship, Responsions (Oxford), in specified subjects, Parts 1 and 2 of the Cambridge Previews; the Matriculation Examination at London, Liverpool, Leeds, Sheffield, Wales, Manchester, Birmingham, or Bristol University, at the National University of Ireland, or Queen's University, Belfast, or Durham University (other than in Music); the Senior Grade Examination of the Free International Education Board; the Qualifying Examination at Sandhurst or Woolwich; the Preliminary for the M.A. degree at Edinburgh, Glasgow, St. Andrew's or Aberdeen; the Principal or Ordinary Entrance Examination of Dublin University; Oxford or Cambridge Senior Local, English Language and Literature and Latin; the School Examination (Matriculation Standard), London University; the Matriculation Examination of the University of the Cape of Good Hope, provided English has been one of the subjects; or must hold the School or Higher Certificate of the Oxford and Cambridge Schools Examination Board. Applicants must fill in an admission form supplied by the Inns of Court and be presented with two independent testimonials as to character and ability. After admission they must, before being called, dine in Hall 6 times during each of 12 terms, the number of times being reduced to 3 in the case of University Students. Ex-solicitors need not keep terms, which are from 3 to 4 weeks, and exemptions from 2 of them are sometimes allowed in the case of those who have won a Studentship or taken honours in examinations. There are two examinations, both technical; the first may be taken at any time after admission and the Final after 6 terms. By hard work a diligent student may qualify in a couple of years and (subject to being not less than 21) be called to the Bar. Scholarships and prizes are to be won by students, including a Studentship for 3 years of a hundred guineas per year, the winner of which must be under 25. The Inns charge an entrance fee (in round figures) £40, and require "caution money" of usually £50 (£100 at the Inner Temple) or bonds with 2 sureties. Caution money is returnable at call, or on withdrawal or death before call. Call fees are nearly £100. In Ireland, King's Inn, Dublin, is the only Inn, and here the course is on the same general lines as in London, costs being about the same. The London Inns admit an Irish barrister of 3 years' standing on his keeping these terms, and on being called he pays £50 less, having already paid £50 in Ireland for Government stamp.

WOMEN BARRISTERS.

Dr. Ivy Williams was the first woman to be "called" to the English Bar, and there are now many women students at the various Inns of Courts, the regulations being identical with those for men students. There is no necessity for residence in London during the period of study, except for the purpose of eating the dinner, but as these have practically ceased to be it is possible to attend them from a distance.

CHEMISTS (ANALYTICAL).

Education and training for the profession of an Analytical Chemist should begin during an aspirant's school-days. A school should be selected with a good reputation for scientific study and work, and with chemical laboratories. At such a school it is well to remain until the age of, say, at least 18 is reached, and then the student, at one of the Universities or some other recognised establishment, should (for 4 years or longer) prepare for the examinations of the Institute of Chemistry of Great Britain, whose offices are at 30, Bloomsbury Square, W.C.1. Candidates for admission to the Institute must be over 17 and have passed an approved Preliminary Examination. For full particulars of other conditions application should be made to the Registrar, as also for particulars of the Intermediate and Final Examinations. Passing the latter is the qualification for Associateship. To become a Fellow an Associate must have been registered for 3 years, spent in chemical study and work. Students must sit for the Intermediate within 5 years of their admission. Registration fee on entrance and annual subscription are nominal. Most of the Universities and University Colleges are eligible for the necessary instructional courses, besides a number of approved Institutes, expenses being greatest at the first-named. Scholarships and exhibitions are fairly numerous.

WOMEN ANALYSTS.

Several women are employed as Analytical Chemists, and they have been found very well suited for the work. The training and qualification are the same as for men.

CHEMISTS (PHARMACEUTICAL).

On the presentation of a certificate that he has passed certain approved examinations in English, Algebra, Arithmetic, Geometry, two optional and other subjects, a youth is eligible for admittance as a student-apprentice into the Pharmaceutical Society of Great Britain, the Registrar of which, at 17, Bloomsbury Square, W.C.1, will supply all particulars concerning these examinations on application. Registration fee is 2 guineas. It is best for a student-member of the Society to be apprenticed to a Chemist and Druggist, though training establishments are available. If he "lives in" with his master a premium is usual, and the usual term, at a trifling wage, is for 4 years. On passing the Minor Examination of the Pharmaceutical Society, a student is registrable as a Chemist and Druggist. Examination fee 10 guineas. He must be 21 at the time of the examination, to prepare for which a course is generally gone through at one of the Society's schools. The Minor Examination is held 4 times yearly, the Major twice—fee 3 guineas—qualifying for registration as a Pharmaceutical Chemist. Scholarships (for free technical training) are offered for competition by the Pharmaceutical Society.

WOMEN DISPENSERS.

Women have recently entered the profession of Pharmaceutical Chemistry in large numbers, the majority contenting themselves with the Minor Examination which qualifies them as Dispensers. Numerous appointments are open to women and for most of them a certificate of qualification is essential.

CIVIL SERVANTS.

There are so many branches, divisions and grades in the Civil Service at home (for men and women), and in the British Dominions and Dependencies, that it is impracticable to give particulars here. Detailed information is published in the "Civil Service Year Book," issued annually by Messrs. Shephard, Cooper & Co., 76-78 Clerkenwell Road, E.C.1. Employment in the Civil Service carries with it an assured income and superannuation, in the higher classes a good social position, and in some departments overseas some adventure and variety.

GOVERNMENT POSTS FOR WOMEN.

Several important posts in the Civil Service are held by women, and they are regarded as more suitable than men for certain offices. Rules and regulations can be obtained from the Civil Service Year Book (*see above*) or from the Secretary, Civil Service Commission, Burlington Gardens, W. 1.

CLERGY.

There is at the present time a dearth of candidates for the Orders of the Established Church of England. The advantages of a general and specialised training at Oxford or Cambridge are indisputable. Failing this, a degree of some other University is desirable. A third course is to train, say for a couple of years, at a Theological College: St. David's College at Lampeter and St. Aldan's College, Birkenhead—at both of which it is possible to take a degree—are recommended. Sound and economical preparation for Colonial Clergy is given at Trinity and Wycliffe Colleges in Toronto, the Diocesan College in Montreal, and at King's College, Windsor, Nova Scotia. Deacon's Orders cannot be undertaken under 23 years of age, and Priest's under 24, but Bishops have discretionary power to ordain irrespective of degrees or training. Roman Catholics and Nonconformists have their own rules, regulations and customs as regards their Priests and Ministers. There are numerous agencies for giving monetary assistance in the education of necessitous candidates for the ministry of all denominations. Church of England candidates in need of such help for a University training should apply for information to the Principal, St. Chad's Hall, Durham.

COLONIAL CAREERS.

Success in the Colonies depends more on the applicant than on the Colony in which he seeks it. A welcome and help are in waiting for the suitable immigrant; the unsuitable is not wanted, and should stay away. Of the varying conditions and requirements at different Colonies the Agent-General of each is ready to supply full information on request, and it is well to study and compare particulars before deciding where to go. Very useful publications are always obtainable from the Oversea Settlement Committee, 6, St. James's Square, S.W. 1; the Public Schools' Year Book, issued by the Year Book Press, 31, Museum Street, W.C. 1, is always instructive and up to date; while those who seek to follow professions in the Colonies and Dependencies should study the Professional Handbook (Oversea Settlement Committee). Special attention is directed to the Public Schools' Emigration League, the address of the Secretary of which is 12, King's Bench Walk, E.C. 4. The League was "formed under the

auspices of the Headmasters' Conference and the Headmasters' Association to furnish information, guidance and protection to boys leaving the Public and Secondary Schools of the United Kingdom who intend to make their livelihood by farming, or in other occupations, in the Dominions and Colonies." It is in touch with Colleges in the homeland where practical Colonial training is given before emigration, at very moderate charges. Its branch offices abroad co-operate with local advisory committees, and its Information Bureau gives advice and issues a number of useful publications. Overseas careers are open in the Indian and Colonial Police, South African Police (recruited in South Africa), British South Africa (Rhodesian) Police, West African Constabulary, Police in British East and West Africa, and North-West Frontier (Canada) Police (recruited in Canada, chiefly from men born there).

WOMEN AND THE COLONIES.

The Society for the Oversea Settlement of British Women gives information on openings for women in all parts of the British Empire and assists women and girls of good character to settle in the Dominions overseas.

DENTAL SURGEONS.

Before their professional education aspirants for the L.D.S. must pass a Preliminary Examination which is identical with that for Medical Students. Successful candidates register themselves at once as Dental Students at the Dental Board for the United Kingdom, 44, Hallam Street, W. 1. For 2 years they must apprentice themselves (premium being moderate, but variable) to a registered practitioner or enter a recognised Dental Hospital (Mechanical Department). Another term of 2 years (minimum) must be passed in hospital study. The first examination (held four times a year, fee 3 guineas) is the Preliminary Science, in Chemistry and Physics. Candidates may sit for this either before or during apprenticeship, or study at a Dental School, but must show that they have had 180 hours' instruction in Chemistry and 120 in Physics at a recognised establishment. The First Professional Examination, in Mechanical Dentistry and Dental Metallurgy, is held twice a year, fee 2 guineas. Candidates must prove that they have 2 years' professional training. The Second Professional, or Final (in two parts), is in General Anatomy, Physiology, General Pathology and Surgery; Dental Anatomy and Physiology, Dental Pathology, Surgery and Dental Surgery; fee 5 guineas. Held twice yearly. Candidates must have had 4 years' training since registration. Fee on taking diploma is 10 guineas. Fees for the necessary Hospital course vary much. At the Royal Dental Hospital of London and School of Dental Surgery, in Leicester Square, and at the Edinburgh Dental Hospital and School, scholarships, entrance scholarships, and other awards, are the subjects of annual competition.

WOMEN DENTISTS.

The profession of Dentistry is open to women on equal terms with men, and women are also eligible for the prizes, scholarships, etc.

ENGINEERS.

Engineering is a profession of too many branches and departments for separate mention. There are boys with the necessary proclivities

and aptitude who are prone to suppose that it is their hands rather than their heads that require training; but—to be something more than a mere mechanician—this is a great mistake. In all the higher departments a thoroughly sound general education is a first requisite for success in civil engineering—by which is here meant all engineering that is non-military. There are many schools with engineering facilities. Theory must be mastered as well as practice. Leaving school between 16 and 18, a youth may proceed direct for a 3 or 4 years' course at a University, College or Training Institute, and then enter a Works for at least 2 years; his Works experience may come first; or he may be apprenticed for, say, 6 years at a Works, spending part of his apprenticeship time at College. Some firms now receive apprentices without a premium, but where a premium is payable it may, from £100, run into hundreds of pounds, a small wage being usually paid. Scholarships and Exhibitions are to be won that much reduce the expenses of education and training. Dockyard apprentices are received between 14 and 16, on special conditions; particulars from the Admiralty. The principal professional Society is the Institute of Civil Engineers, in Great George Street, Westminster, S.W. 1, consisting of Students, Honorary Members, Associates, Associate Members, and Members (M.Inst.C.E.). Admission and promotion are by examination, with exceptions in favour of those who have passed approved examinations elsewhere; but no one is allowed entrance without previous education and training. Candidates for Associate-Membership must be over 25, and for Membership over 30. Other Institutions are in existence representing various branches of the profession.

WOMEN ENGINEERS.

Most of the Engineering Institutions admit women as members and there are several women working as engineers, either on their own account or in appointments. The interests of women so employed are sustained by the Women's Engineering Society.

JOURNALISTS.

Journalism is an absolutely open profession. Anybody can enter it without examination, apprenticeship, or influence. Unless possessed of the necessary abilities the sooner he comes out of it the better. Journalists are of two kinds—those on the staff of a Journal and unattached "free lances." Some of the latter do well, and more do badly. Ordinarily, to become a regular attached Journalist, the easiest and perhaps the best plan is for a youngster to graduate on a suburban or provincial paper—preferably not a large one—the experience to be gained on a smaller paper being of a more all-round nature. After going through the mill he should seek an appointment on a big provincial or London journal, in either a general or specialised capacity. There are editors who receive pupil-apprentices, and a premium with them. There are now in London Schools and Training Institutes for would-be Journalists, several of which are genuine, and competently conducted; others are frauds.

WOMEN JOURNALISTS.

Women appear to succeed as Journalists quite as easily as men, but the advice given in the

second sentence of the foregoing paragraph is even more applicable to women than to men.

MARINE ENGINEERS.

For full particulars as to getting into the Engineering branch of the Royal Navy, and for a knowledge of the rules and regulations of that service, it is better to obtain detailed information from the Admiralty (as mentioned under "Engineers"). In the Mercantile Marine applications are entertained by all steamship owners. In the case of a beginner who seeks a junior appointment in the Engineer-room, time served in some Works ashore counts as so much time served at sea. His foot once on the ladder, a young Marine Engineer can work his way through the various grades to the top. To be Chief-Engineer of a big liner is to hold a good position.

MASTER MARINERS.

After 4 years at sea, the Board of Trade Examination may be taken for a Second Mate's ticket at 17 years of age; at 19, after 5 years at sea, that for a First Mate's; at 21, after 6 years' sea service, that for a Master's certificate, but commands are not given at so early an age. A lad may go straight to sea from school, preferably on a sailing ship, as an apprentice, a premium being usually but not now invariably charged, ranging from £30 to £50 and £60, a small wage being commonly allowed during apprenticeship; or he may start on a training vessel for 2 years, which count as 1 year's sea service. Of these School Training Ships, the *Conway*, at Rock Ferry, Birkenhead, receives boys from 12 to 16, and in special cases up to 17, at £75 per year, with £6 extra for those in the Royal Navy class. A reduction is made for the sons of officers in the Navy and Merchant Service. Fees on the *Worcester*, off Greenhithe, are a little less; age of admission between 12½ and 15, in special cases 16. Fees include uniform, but an outfit must be bought on joining either ship, and a sea-going outfit when the lads leave to proceed to sea. The cost of these outfits is not considerable. Candidates for the Bengal Pilot Service are selected from the *Conway* and *Worcester* cadets. Two sea-going sailing ships are kept in commission as Training Schools by Messrs. Devitt & Moore (Fenchurch Buildings, E.C. 3), and one by the White Star Line (Liverpool). The charges of the first-named firm are £60 for the first voyage (of about 9 months), £50 for the second and third, £40 for the fourth; and of the White Star £70, £60, £40, £30; both make reductions for youths from the *Conway* and *Worcester*.

MEDICAL PRACTITIONERS.

The training of a medical man is long—averaging about 6 years, 5 years being the compulsory minimum—and expensive. By the time he has taken his M.D. at Oxford or Cambridge the cost has been about £1,000; at London about £900; at other Universities from about £500 to about £700; less for the London (M.R.C.S. and L.R.C.P.), Edinburgh (L.R.C.S. and L.R.C.P.) and Glasgow (L.F.P.S.) diploma. The youngest age at which an aspirant can register his name as a student with the General Medical Council (in London, at 209, Oxford Street, W. 1; Edinburgh, 54, George Square; Dublin, 35, Dawson Street) is 16, but before registration he must have passed an approved Preliminary Examination. No one may practise as a Doctor until his name is put on the Medical Register by

the General Medical Council, which is done on production of specified certificates of proficiency, granted by the Universities, the Conjoint Board of the Royal College of Physicians and Surgeons, the Society of Apothecaries of London, and the Apothecaries' Hall of Ireland. To qualify for admission to the Register by means of the examinations of the Royal College of Physicians and Surgeons is the most common procedure. One year after registering as a student a candidate may sit for his First Professional (Preliminary Scientific) Examination, and 3 years after such registration for his Second Professional (Intermediate); for both he must have studied at a recognised Medical School. Between passing his Intermediate and taking his Third (Final) Professional Examination he must walk the Hospitals. On account of the greater value of an M.D. degree over a diploma some holders of the latter, after taking it, qualify for the former. Medically, a London M.D. is considered superior to that of other universities. In reduction of the costs of a medical education numerous scholarships and bursaries are gainable.

WOMEN DOCTORS.

The training of women students in London is no longer restricted to the School of Medicine for Women, and several of the large general hospitals now admit them on the same conditions as men, while women doctors have been most successful in obtaining various hospital and other appointments. A set-back occurred, however, in 1922, when the London Hospital, which had admitted women students for some time, decided to discontinue their admission. The length of time required to train and the fees involved are the same as for men. It is an open question whether co-education among medical students or a separate institution is the better system. While many prefer a mixed school, a large number still like one for women students only, judging by the crowded class rooms and laboratories in the School of Medicine for Women. There are a number of scholarships at their own school, and also at others, that they can compete for. The prejudice against women doctors has practically died down—at least among the profession. There is plenty of scope for women not only abroad, but at home, and as the various organisations for the prevention of diseases grow, so will their work, especially in connection with tuberculosis and child welfare.

NURSING.

The Nursing profession still attracts large numbers of educated women. After the War there was an expectation that the demobilisation of the V.A.D. would cause overcrowding, and even an invasion of the private practice of the trained nurse, but the long training required before qualification prevented the overcrowding, and only those who intended to adopt Nursing as a profession continued their work. Training facilities are constantly improving, and greater facilities are being afforded for the enlargement of experience and development of study. Three to four years' training are essential, and it is expedient, if not essential, to gain additional certificates in Fever cases (requiring a 12 months' course) and Midwifery (4 months'). Training is, as a rule, free, and a small salary is sometimes given. The pay at an Institute is not high, but board, lodging and laundry are free. The private Nurse earns the best livelihood, once a connection has been worked up.

MALE NURSES.

Men are well suited for nursing in male cases, particularly where strength is required, as in mental cases. Many ex-service men have become specially trained at Institutes, after a hospital course. The address of the Army and Navy Male Nurses Co-operation is 11A, Welbeck Street, W. 1.

ROYAL NAVY.

The Royal Navy of Great Britain is the finest service in the world. None is eligible for it but the soundest and the fittest, and the perfect-sighted. It must be entered at an early age. The interview at the Admiralty in Whitehall that precedes the Qualifying Examination for a Cadetship may take place at 12 years and 8 months and applications for an appointment should be addressed some months before to the Assistant Private Secretary of the First Lord of the Admiralty. All Naval Cadets, whether for Commissions in the Executive or Engineer Branches, or for the Royal Marines, undergo the same training together at Osborne and Dartmouth until—usually between 19 and 20—they pass as Midshipmen, Sub-Lieutenants or Second Lieutenants. All information as to conditions of service, pay, pension, and other particulars, are obtainable at the Admiralty. The total costs, including an allowance of £50 a year for 3 years, are calculated at from £700 to £750.

SCHOOL TEACHERS.

Employment in Private Schools is usually sought through the Scholastic Agencies. In the "Great Public Schools" an Oxford or Cambridge degree is almost essential, and in Secondary Schools of the modern type, under County Education Authorities, a degree, or its equivalent, is also almost essential. The best qualification is a degree *plus* a University Diploma in Teaching. These schools are largely staffed in many cases by ex-Elementary Graduate Teachers. To become an Elementary School Teacher it is well to gain admission to a Secondary School at an early age, where attendance is normally continuous for about 4 years, after which a candidate (say about 16) is eligible for appointment as a Bursar for a year. He (or she) must enter for an examination for admission to a Training College. On the recommendation of the Higher Education Committee a Bursar is appointed as a Student Teacher for a year in an Elementary School, continuing his studies at a Secondary School one day every week. At the end of his year, he should proceed to a Training College. After College Training, he sits for the Certificate Examination, gaining which he may be appointed as a Certified Assistant. Student Teachers of both sexes are paid £35 per annum; commencing salary of Certified Teachers is for men £200, with an annual rise of £12 10s. to a maximum £425; women £187 10s., with an annual rise of £12 10s. to a maximum £340. Pensions are given similar to those of the Civil Service. Education Authorities award scholarships to those undergoing training.

WOMEN TEACHERS.

Women teachers are wanted for general teaching, and as specialists in certain subjects—domestic science, games mistresses, and dancing mistresses especially. To succeed in the profession it is essential to be thoroughly trained. The Elementary school mistress has to

go through a definite course of study, and must start very young, and to become thoroughly well-fitted it is essential to obtain a degree. The usual time to study for a degree is three years, and then a year must be spent at a training college. Nearly all Universities admit women at 16 years of age. Certain Colleges are for women only, while in others there is co-education. The branch of education to be studied must depend on the subject which interests the student most. There is more demand for teachers in arts than in science. The appointments open to teachers are of various sorts—resident, non-resident, whole-time, and visiting. Besides appointments at schools, there are various posts at Universities to be aimed at, and every mistress can aspire to be a "Lady Principal."

SOLICITORS.

The Preliminary Examination of the Law Society is held three times annually, in London and in various provincial centres; those who have passed certain examinations being exempted. Having passed or being exempt, the candidate must serve for 5 years as Articled Clerk in a solicitor's office, and if Articled after December 31, 1922, must, unless specially exempted, attend for one year at some school of law approved by the Law Society. Graduates of a British University and Barristers of under 5 years' standing are required to serve under Articles for only 3 years; 4 years for those who have passed certain specified examinations. Premium ranges from £100 to upwards of £400. Stamp duty on articles is £80. A firm will sometimes reward an ordinary clerk by "giving him his Articles" without premium. After 1 year from the date of his Articles an Articled Clerk may sit for the Intermediate Examination: £6 for a first sitting, £3 for each subsequent attempt. Barristers of 5 years' standing are exempt from this examination, and Graduates in Law of Oxford, Cambridge, London, Dublin, Durham, Birmingham, Manchester, Leeds, Liverpool and Sheffield Universities, and of the University of Wales, with those who have passed with Honours in Jurisprudence at Oxford or Law Tripos at Cambridge, are exempt from its Law portion. For the Final Examination the fee for a first sitting is 10 guineas, and for any subsequent sitting 5 guineas. Opportunity is given for an Honours Examination, at £1 extra. Both examinations are held in London three times a year. Admission to the Roll of Solicitors costs £30, and a Solicitor pays an annual licence of £4 10s. for the first 3 years and £9 afterwards when his practice is within 10 miles of the G.P.O., London; and £3 and £6 beyond that radius. The Hall of the Law Society is in Chancery Lane, W.C.2. It has scholarships and prizes to award, of which particulars are obtainable from its secretary.

WOMEN SOLICITORS.

Women are admitted by the Law Society on the same terms as men.

STOCKBROKERS AND JOBBERS.

A Stockbroker is one who deals in Stocks and Shares on commission for others, a Jobber one who does so for himself. Stock Exchange Clerks are of two orders—Office Clerks with no, or very remote, chances of ever becoming Members, and House Clerks, Authorised and Unauthorised. House Clerks are allowed on to the House, or Stock Exchange, and Authorised Clerks are

empowered to deal for their Principals. With the exception of such Clerks as may be admitted into Membership, each candidate for Membership must buy a nomination from some retiring Member or the executors of a Member deceased. For this the payments vary from £500 to £900. If he has been a House Clerk, a new Member must hold 1 Stock Exchange Share; otherwise 3. The value of a share is about £320. He must also pay an entrance fee of 500 guineas. The annual subscription is 40 guineas. Both entrance fee and subscription are paid by all, whether late House Clerks or not. Three sureties of £500 each for 4 years are necessary, unless the new Member has been a House Clerk for 4 years, in which case 2 sureties for 4 years of £300 each are required. Members of the Stock Exchange are forbidden to advertise their business.

SURVEYORS AND LAND AGENTS.

Practitioners of this calling should by all means hold the certificate of the Surveyors' Institution (12, St. George Street, Westminster, S.W.1), to gain which there are three ways of going to work. An intending may take a University College course. The Institution awards Scholarships of £80 a year at Oxford and Cambridge, and of £60 and £50 at other British Universities. If he elect to study at an Agricultural College, Scholarships and prizes may be gained that considerably lessen costs. A third procedure is to be apprenticed to a Surveyor or Land Agent, the premium, for the usual term of 3 years, differing in different places. The Preliminary Examination of the Institution is open at the age of 16, but candidates cannot become Students of the Institution until 18. At 19 they may take their Intermediate. For the Final, candidates must be 21. Passing this, they may become Professional Associates (P.A.S.I.). Another examination (for which non-members are eligible) is that for Fellowship (F.S.I.).

VETERINARY SURGEONS.

A Veterinary Surgeon must hold the diploma (M.R.C.V.S.) of the Royal College of Veterinary Surgeons, 10 Red Lion Square, W.C.1. There are four Veterinary Colleges for education and training in England and Scotland: the Royal, in Great College Street, Camden Town, N.W.1; the College in association with Liverpool University; the Royal (Dick), Clyde Street, Edinburgh; and the Glasgow Veterinary College. The lowest age for admission to any one of them is 16, and a student must have passed an approved Preliminary Examination. He trains for at least four years, taking an examination at the end of each. Tuition and examination fees amount in all to not more than £100 in England, less in Scotland. Monetary prizes and annual exhibitions are awarded to London students, and to students in Scotland, by the Secondary Education authorities; fees and maintenance allowance are provided for by bursaries, in whole or in part, in the case of the necessitous; while, on certain conditions, all fees are paid by the Carnegie Trust. Unmarried members of the Royal College of Veterinary Surgeons are eligible for the Army Veterinary Department between 21 and 27 years of age, and up to 26 for the Indian Civil Veterinary Department.

WELFARE WORKERS.

Welfare Work covers a wide field, the term being generally used to denote work amongst women and girls in industrial employment,

while work connected with children is given the special title of "Child Welfare," which is dealt with later. In the former case the work deals with the general well-being of the employees. Large factories have welfare sections, comprising mess rooms, clubs and recreative sports. The Welfare Worker occupies a position of responsibility midway between employer and employed, and the number of women engaged in the work is constantly increasing. The requisites for employment are a knowledge of industrial laws and training in social work. A definite course of at least twelve months' training at a college holding welfare classes is required. The London School of Economics makes a special feature of such courses, and most of the English and Scottish Universities afford similar facilities. Qualified workers receive a salary of about £145 as Assistants, and experienced Welfare Workers may reach £350 a year, or more.

CHILD WELFARE.

This work consists in training mothers in the up-bringing of their children, or in studying and improving the conditions of child life. Hospital experience is essential, followed by training in an Infant Welfare Centre. Subsequent work is of two kinds, *viz.*, making the sick child well, and keeping the healthy child fit. For these purposes hygiene and sick nursing must be studied, and it is generally held that a year at a children's hospital should be followed by a further year at a *criche*, and chances of success in after life are enhanced by additional training in midwifery. Applicants may enter a hospital at the age of 19, but maternity training cannot be taken until later as no woman may enter for the examination under the age of 24. Infant Welfare training courses are held at various

Colleges and Polytechnics extending from 3 to 12 months, and the Board of Sanitary Inspectors grants certificates, which are held in high esteem. Health Visitors' work is very similar to that of Infant Welfare Workers, as it is principally concerned with the infant and its mother. The elements of Child Welfare are included in the syllabus of training for Girl Guides.

WIRELESS OPERATORS.

Against the small pay of a Wireless Operator is to be taken into consideration that his training is neither long nor expensive, that he has joined a calling with incalculable possibilities of development, that he has an immediate opportunity of seeing the world, and that after a period at sea he may fit himself for a better paid berth ashore. After qualifying at a College or School (at small cost), application for an appointment should be made to the Marconi Company in the Strand, W.C.2. Accepted candidates after passing the Company's doctor (to whom they pay one guinea) are sent for a special course to the London or Liverpool School of the Company, during which they receive 17s. 6d. weekly. On appointment to a vessel the minimum payment is £1 per week for the first year, with a yearly rise of 2s. 6d. a week up to 30s., and from 30s. up to 55s. of 5s. a week: board, quarters, and uniform being provided free. Their mess is with the ships' officers. When employed ashore they are allowed for maintenance 2s. 6d. a day. These rates do not apply to special work in other countries, which is more highly paid. Inspectors and Superintendents receive about £400 per annum. Women are not considered suitable for employment as Wireless Operators owing to the nature of the work.

The League of the Empire (FOUNDED 1901).

THE League is entirely non-political and non-sectarian. Its practical work has been to promote co-operation between the different Countries and Colonies of the Empire, mainly in affairs connected with education, and to afford full and correct information regarding them, so that the duties of citizenship may be better understood and appreciated, and personal and active interest inspired in the great problems connected with our Empire's conditions and progress. The relation of the League to the Education Departments and Governments throughout the Empire has been regularised (a) through the recommendation of its work to the Governments concerned by the Colonial Office of the Imperial Government and by the Agents-General in 1902-3; (b) by the active and widespread acceptance of its schemes by the different Educational Authorities and Governments. In 1907 the League carried through the first Conference between the Education Departments of the Home and Colonial Governments. One of the effects of this Conference was that the Imperial Government undertook to call the Imperial Conference on Education in 1911. In 1912 the first Imperial Conference of Teachers' Associations was held by the League, and in 1913 was inaugurated the Imperial Union of Teachers. In 1921 the second Imperial Conference of Teachers' Associations was held in Toronto, by invitation of the Government of Ontario. An annual meeting of the Empire Union of Teachers takes place each July. The League, through the liberality of the late Mr. Louis Spitzel, has published a series

of text-books on the Empire, under the editorship of Professor A. F. Pollard: (1) "The British Empire—Its Past, Its Present, and Its Future" (a book of reference); (2) "The British Empire and Its History" (for Secondary Schools); (3) "The Story of the British Empire." In 1907 the League helped to establish a lace industry in St. Helena. With the co-operation of the Oversea and Home Education Authorities a Scheme for the interchange of Teachers throughout the Empire is now in active operation, over 300 interchange appointments have already been arranged. Visits to historical places in England and on the Continent are planned for overseas teachers. The School Affiliation and Comrades' Correspondence Sections were established in 1901-2. Other work undertaken are the giving of lectures, the establishment of a bureau of information, essay competitions, exhibitions, and the furthering of the keeping of Empire Day.

During the War the League distributed from its depot over a million articles to the hospitals and troops, besides helping prisoners and others in distress. The League has also given colours and shields to all the overseas contingents who fought for the Empire.

Hon. President, H. R. H. The Duke of Connaught and Strathearn, K.G.

Chairman, Executive Committee, The Headmaster of Winchester, M. J. Rendall, LL.D.

Hon. Treasurer, Sir Philip Hutchins, K.C.S.I.

Hon. Secretary, Mrs. Ord Marshall, C.B.E.

Address, 124 Belgrave Road, London, S.W. 1.

The Year's Weather.

(1921) November brought to a close the long succession of months which had a mean temperature above the average, and although rather mild in Ireland, the general character of the weather over Great Britain was cold, dry, and foggy.

Mean temperature ranged from $2^{\circ}6'$ above the average in Northern Ireland and $2^{\circ}7'$ in Southern Ireland to $2^{\circ}0'$ below in the north-east of England and the Midland Counties and $3^{\circ}1'$ in the Eastern Counties. Frost occurred for several nights in succession, and were particularly severe between the 8th and 11th and the 27th and 28th, the thermometer in many places going to 20° or below. The wintry conditions at the beginning of the month were less intense and of shorter duration over Scotland than over England. On the 11th the temperature fell to 18° at Buxton, 15° at Rounton, 14° at Wellington and 12° at Garforth. As far south as Essex 20° was registered at Shoeburyness and 19° at Chelmsford. On both the 10th and 13th, 25° was recorded at Kew, a value without precedent at this station so early in the month of November. Towards the end of the month the frost was intense in some parts of Scotland. Braemar registered 12° and Balmoral 11° on the 28th, and Logie Coldstone 10° on both 27th and 28th. During the cold weather which continued over England until the middle of the month, snow in some places lay several inches deep. With the exception of Southern Ireland, which had an excess of $0^{\circ}22$ in., the month's rainfall was below the average. Over an extensive area in Scotland less than half the normal amount was measured, the deficit being $1^{\circ}25$ in. in Eastern Scotland and $3^{\circ}26$ in. in the North. At Glencarron (Cromarty) it was the driest November for at least 35 years. Among the heavy falls of rain which occurred during the generally unsettled conditions prevailing at the beginning of the month was that at Kew between the 2nd and 5th, when the amount was more than half the monthly average. Thick fog prevailed locally, especially in Industrial areas. London suffered particularly on the 27th and 28th, the fog which prevailed on these two days was one of the thickest and most persistent of recent years. In striking contrast to the London area on this occasion, brilliantly sunny weather prevailed on the south-east coast of England. The total amount of sunshine for the month varied considerably in different districts, and was largely affected by the prevalence of fog, particularly in the neighbourhood of large towns.

December was uniformly mild for the time of year, with a somewhat excessive number of rain days, although the rainfall, except in Scotland and north-west England, was below the average. There was an almost unbroken succession of depressions coming in from the Atlantic, and it was under the influence of these depressions that temperature rose. At 7 a.m. on the 5th the temperature at Valencia was 55° . By the 6th the warm air current had affected all parts of the kingdom, and by the 8th the temperature at Aberdeen rose to 59° , a reading equal to the record value of December 15th, 1873. On the same day at Eskdalemuir was reached the highest December reading that had been experienced there during the period 1910-

1921. During the night of the 18th-19th temperature did not fall below 50° in many parts of south-eastern and southern England. A rapid change of temperature took place at Christmas. On Christmas Eve, under the influence of a N.W. wind, temperature fell considerably over the British Isles, and ground frosts were general. On Christmas Day there was a renewal of mild weather, and the thermometer rose to or exceeded 50° in southern England, and was followed by a sharp frost next morning. The mean temperature was well above the average in all districts, the amount of excess varying from $2^{\circ}5'$ in the south-west of England, $3^{\circ}4'$ in the West of Scotland, to $4^{\circ}9'$ in the North of Ireland. The mean temperature in Scotland was the highest experienced in Scotland during December for over 20 years.

Less than half the average rainfall was recorded in the neighbourhood of London and in the south-east of Ireland. At Glenquoich (Inverness) the total fall of $25^{\circ}6$ in. has only been exceeded twice in December during the last 40 years. At Loan (Inverness) as much as $40^{\circ}6$ in. was measured, a rare occurrence even in this remarkably rainy district. Less than $1^{\circ}0$ in. were recorded locally in the South-East of Ireland, while in the North-West more than 4 ins. were general. Compared with the average the North-West of England had an excess of $0^{\circ}6$ in., the West of Scotland $1^{\circ}6$ in., and the North of Scotland $3^{\circ}5$ in. The districts with the greatest deficiency were the South-East with a shortage of $1^{\circ}3$ in., the South of Ireland with $1^{\circ}8$ in. and the South-West of England with $2^{\circ}4$ in.

At a large number of places more than two-thirds of the month were rain days. An unprecedented high tide accompanied by strong gales caused serious floods at Hull on the evening of the 17th, doing much damage and rendering many people homeless. On the 30th gusts between 55 and 60 miles per hour were recorded at Kew Observatory, between 60 and 70 miles per hour at Scilly and Benson (Oxon), and over 75 miles per hour at Holyhead.

(1922) January was very changeable, the fluctuations of temperature being exceptionally large. Rain was $1^{\circ}60^{\circ}6$ the normal, the excess being greatest in those parts of the country where the drought of the preceding months had been most severely felt. There was a good deal of snow, mostly on the Scottish Border. As in the latter half of December gales and high winds were of frequent occurrence, and caused considerable loss to shipping. The month opened with strong westerly and south westerly winds with an abnormally high temperature. It was the mildest day of the month in many districts, temperature reaching 57° as far north as Aberdeen, and remained above 50° at night in many places. A severe snowstorm developed in the north-east of Scotland on the 3rd, which spread southwards on the 4th and 5th. Heavy rain was experienced in many districts, over an inch being recorded at Eskdalemuir on the 9th. A thunderstorm was reported at Wick on the 10th, and on the next day there was lightning accompanied by snow and hail in Lincolnshire. On the 13th, temperature at several stations failed to rise above the freezing point. By the 15th, gales and snowstorms became widespread.

The snowstorm of the 15th was particularly severe in Scotland, where it was followed at intervals by further heavy falls until nearly the end of the month. During the early morning of the 18th, temperature fell as low as 16° at Cranwell (Lincs) and 8° at Eskdalemuir, but the approach of a large depression from the Atlantic caused a rise of between 20° and 30° during the day in some districts. A thick fog occurred in London on the 22nd. A striking difference of temperature was exhibited on the 23rd, when Valencia, under the influence of a warm air current from the Bay of Biscay, had a temperature of 53° , while at the same hour the reading at Yarmouth was only 38° . Two days later with an easterly wind at Valencia the thermometer read 37° , only one degree higher than the reading at Yarmouth at the same time. The 24th was noteworthy for its low day temperature. In the morning there were a few degrees of frost, but owing to the easterly wind the cold became more intense as the day advanced, and by 13th the screened thermometer at Kew Observatory was down to 27° and at Lympne (Kent) down to 24° . The mean temperature for the month did not differ very greatly from the average. Excluding the Channel Islands the difference ranged from an excess of 11° in the South of Ireland, no difference in the Midland Counties to a deficit of 15° in the east of Scotland. Rainfall was generally above the average, especially in those parts of the country which are usually the driest. In many districts in the centre and south-east of England more than 150 per cent. of the normal was recorded. At Norwich it was as much as 265 per cent., and was the largest amount recorded in any January since 1865. At Ipswich it was the wettest January for 20 years. At Aberdeen it was the wettest since 1903. Over the British Isles generally total falls of less than 2 ins. during the month were confined to the neighbourhood of the Wash, the Valley of the Tweed and along the Firth of Forth.

February was for the most part mild and unsettled, with some considerable fair intervals. On the 1st temperature rose to 50° or above in many parts of central and southern England. On the 4th conditions in the south-east underwent a remarkable change. Following a mild night, temperature dropped suddenly during the morning, with snow and sleet falling steadily during the greater part of the day over eastern England. The maximum temperature at Cranwell (Lincs), Gorleston and Pulham never rose above 30° . Snow fell in many parts of Scotland on the 4th and 5th, being most severe on the eastern side. For several days there was a spell of dry, cold weather. Frost continued all day over eastern England on the 5th, and the succeeding night Benson (Oxon) had a temperature of 19° , South Farnborough 16° , and Cranwell 15° . From the 10th to the 12th very bright weather prevailed over southern England with daily amounts of sunshine of between 7 and 8 hours. Between the 23rd and 25th the south-westerly current over the British Isles was accompanied by remarkably high temperatures, exceeding 55° over a wide area, reaching 58° at Banff and 60° at Gordon Castle, while on the North Wales coast 62° was recorded. A maximum temperature of 61° at Nottingham has been exceeded in February on only one occasion during the past 50 years. With the exception of the east of Scotland, where the mean temperature was normal, and the north east of England which was only just below,

all districts were above the average and ranged from 0.6° in the north of Scotland, 1.6° in the south-east of England, to 2.1° in the north of Ireland. Rainfall was above the average over nearly the whole of the British Isles, but there was a deficiency in the English Lake district, the extreme north of Scotland and the south-east of Ireland. Areas with an excess of 150 per cent. embraced nearly the whole of Wales, Central England, the north-west of Ireland, and the extreme west of Scotland. In Shropshire more than twice the normal was recorded. In the east of Scotland, especially in the valleys of the Tay and Dee, considerable damage was caused by floods due to the heavy rainfall towards the end of January and the melting snow on the surrounding hills. At Perth the flood was the most severe for several years. Sunshine was generally above the average, the difference ranging from an excess of 0.8 hour per day in the Eastern Counties, to a deficit of 0.5 hour per day in the east of Scotland.

March was mild at first but became cooler towards the end of the month, when there were frequent showers of snow, sleet and hail. During the first week temperature fluctuated considerably, but was generally above the average. The maximum at Benson, Gorleston and Pulham on the 3rd was as high as 55° . Subsequently temperature fell a good deal, and severe night frosts were experienced. On the night 10th-11th the ground temperature at South Farnborough fell to 15° , and the screened thermometer was only 21° . By the 20th the weather conditions over the British Isles had become much more unsettled. Falls of snow were recorded as far south as the Scilly Isles, while in the north snow drifts of several feet deep were formed. On the night of the 20th-21st frost was very general, the ground temperature at Benson being 14° , and at Plymouth 10° . Severe frost was again experienced in the eastern and south-eastern districts on the 24th, when the screened thermometer registered 20° at both Shoeburyness and the Isle of Grain, the latter place registering 12° on the ground. At Lympne and Tunbridge Wells on the 22nd the maximum temperature was only 34° . In Ireland and the east of Scotland the mean temperature for the month was in accordance with the normal, and was only very slightly below it in eastern England. Elsewhere the difference ranged from an excess of 0.9° in the north of Scotland to a deficit of the same amount in both the Midland Counties and the south-west of England. The rainfall of the month was generally below the normal, especially in Ireland and Scotland, and in no district was the excess large. Strong wind and gales were frequent during the month, and culminated in an unusually severe gale over southern England on the morning of the 8th. Wind velocities in the south of England and especially in the western Channel were abnormally high; gusts of over 100 miles per hour being recorded. The maximum at Pendennis Castle (Falmouth) was 103 miles per hour, this being equal to the record for England obtained in March 1905. In the Scilly Isles a speed of 108 miles per hour was attained, and was the second highest value recorded by anemometers in the British Isles. The record was that which occurred at Quilty (Co. Clare) on January 17, 1920, when a gust of 110 miles per hour was registered.

April was cold and unsettled, the only real warm day of the month being the 14th. On the

3rd a deep depression travelled up the English Channel accompanied by heavy rain and low temperature, particularly in the southern and midland districts, where there was continuous rain, sleet or snow. The maximum temperature for this day was down to 35° at Hampstead, 34° at Ross-on-Wye, and 33° at Malvern. Unsettled conditions continued until the 14th, which proved to be much the warmest day of the month over the greater part of England. Temperature rose to over 60° in many districts and reached 67° at the Kew Observatory. Under the influence of a northerly wind there was a marked fall of the thermometer with rain and hail, so that on the 16th the maximum temperature at Kew was only 50° , and on the next day in many parts of Scotland it failed to get above 45° . In Scotland the warmest day of the month was that of the 20th, when temperature rose to 60° at Eskdalemuir, 61° at Renfrew, and 63° at Helensburgh (Dumbarton). At Bolton this was the coldest April since 1887, at Meltham (Yorkshire) the coldest, with one exception, for 44 years, while at Dublin it was the coldest for more than half a century, the Wicklow Mountains on many occasions being covered with snow to a considerable depth. The mean temperature of the month was everywhere low and ranged from a deficit of 2.8° in the north-east of England to 4.0° in the north of Ireland. The mean minimum temperature of the month was almost the same as that of the previous January. At Renfrew there was a ground frost on 24 nights.

Rainfall was above the average over the greater part of the British Isles, but in the West Highlands, and parts of Fife-shire and Forfar-shire, there were areas which showed a deficit. At isolated places in Cornwall, Northampton and Morayshire more than double the normal amount was registered. At Grantown-on-Spey it was the wettest April on record, the amount being twice as much as that recorded at Fort William, a complete reversal of the normal relation between these two places. The total rainfall for the 4 months, January to April, in the south-east of England was approximately 50 per cent. above the normal. In northern Scotland the month's rain was below the average. In the south-east of England and the Channel Islands it was above. Sunshine was above the normal in most parts of the British Isles, several districts having more than 40 per cent. of the possible. The north of Scotland had an excess of 1.5 hours per day, while the Channel Isles had a shortage of 0.5 hours per day.

May was mainly fine and sunny with some unusually high temperatures. The most notable feature of the month was the hot spell which began in the south-east and eastern parts of England at the close of the third week. Thunderstorms occurred at the beginning and towards the end of the month, the latter being accompanied by hail stones of a remarkable size. During the first week of the month the weather over the British Isles was variable and unsettled. Winds were chiefly westerly or south-westerly, and in some exposed places attained the force of a gale. Under the influence of northerly air currents night temperatures fell below the freezing point. On Salisbury Plain there was a temperature of 27° on the 3rd, 26° at Balmoral. At many places ground temperatures went down to 20° . Within the next few days a very decided change took place when temperature became unusually high in most parts of England and

Ireland, 80° being recorded in London on the 8th. By the next day fine warm weather had become general. In a few days, however, a northerly wind was blowing over the British Isles, causing temperature to fall below the normal, and at many places on the 12th and 13th readings considerably below the freezing point were registered. The weather over southern England on the next two days fair or fine with occasional rain showers, but in Scotland very unsettled conditions prevailed in which some rather heavy falls of rain occurred, as much as 2.3 ins. being measured in the Isle of Bute, while at Fort William the two days fall amounted to 4.3 ins. From the 22nd to the 24th the weather over the eastern and south-eastern parts of England was remarkable for its exceptional heat. On the 22nd, maximum temperatures of 89° were recorded at Reading and Norwich, 90° at Bexley Heath, and 91° in North London. The nights were also very warm, and at some stations the minimum did not go below 62° and in a few instances was as high as 65° . At the Kew Observatory the maximum in a north wall screen reached 86° on three successive days (22nd-24th), this being the highest temperature in May, at Kew, during the past 50 years. The mean temperature of the month was above the average in all districts, the excess ranging from half a degree in the north of Scotland to nearly 5° in the north-east of England and not much below this in the Midlands. A thunderstorm with exceptionally heavy hail, said to be as "large as walnuts," occurred on the 21st in Yorkshire. In this storm 2.7 ins. of rain was measured at West Witton. On the 25th there was a thunderstorm in London and the south-east parts of England. Except in the north of Scotland where there was an excess of 3 ins., and the west of Scotland with an excess of 1 in., rainfall was below the average. Sunshine was generally above the average. In the north of Scotland there was a deficiency of an hour per day with only 26 per cent. of the possible, but in eastern England there was an excess of over 2 hours per day with a percentage of 57, and in the south-east of England 61 per cent. of the possible.

June was at first fine and warm, but became cool and unsettled. The warm sunny weather which had characterized the latter end of May continued until about the middle of the month, when the weather became cool and unsettled. While in the north-east of Scotland the 1st was the coldest day of the month, with a maximum temperature at Aberdeen of only 51° , fine warm weather prevailed almost everywhere else, with temperatures up to or above 80° , reaching 84° at Ruthwell (Dumfriesshire). Thus between Aberdeen and Ruthwell on this first day there was a difference of 33° . A notable change of temperature took place over Ireland on the 2nd, when the maximum temperature at Birr Castle was 20° lower than that of the previous day. By the 13th the whole of western Europe was flooded with air drawn from Polar regions. This influenced the temperature to the extent of causing a difference between the 12th and 14th of more than 15° at many places, while at the Kew Observatory the maximum which on the 12th was 76° was down to 53° on the 14th. The weather became generally cool, with occasional rain in most places. On the 21st higher temperatures and fine weather was experienced over southern England, with local rain. The last week of the month was marked by cold weather everywhere,

the dull weather, alternating with occasional bright intervals. The mean temperature of the month was below the average over north-west England, Scotland and Ireland, and only slightly above it elsewhere. The differences varied from a deficit of 1.3° in Scotland to an excess of 1.1° in the north-east of England. The Channel Islands was the same as the normal. Rainfall was generally below the average, large areas in the southern half of Ireland and the centre of England receiving less than half the average amount. Rainfall above the average occurred mostly in the western Highlands of Scotland. Over a band extending from Sidmouth to Hull and including a large portion of the Midlands, the total rainfall for the month was less than 1 in. The shortage ranged from 0.4 in. in the north-west of England up to 1.5 in. in southern Ireland. The duration of bright sunshine did not differ to any great extent from the normal. The greatest difference was an excess 1 hour per day in the north-east of England and the Midlands. There was a loss of nearly 1 hour per day in the south of Ireland and the Channel Islands. On the 25th an exceptionally fine pair of rainbows were seen at Hastings.

July was cool and unsettled, and was in marked contrast to the July of the previous year. A depression moving slowly in a north-easterly direction on the 2nd and 3rd caused strong winds and widespread rainfall. On the 5th and 6th there was heavy rain, and gales in the Channel. Another fall of the barometer on the 8th was accompanied by strong gales in the Channel, and generally heavy rain. After a couple of days fair weather, rain again became general, heavy rain and thunderstorms being experienced in the south-east of England. Conditions improved somewhat until the 19th, when in the western districts rain again set in. On the 24th and 25th generally fair weather prevailed, but was succeeded by unsettled conditions over the northern and western districts, the month closing with generally unsettled weather over the British Isles. On the morning of the 21st during a sea fog in the Channel a collision occurred between the *Remuera* and *Marengo*. A warm current of air coming round from the Azores over the comparatively cold waters of the Atlantic caused extensive patches of fog on the route of Atlantic liners. Mean temperature was everywhere below the normal, and maxima exceeding 75° were rare. In parts of Yorkshire and the Isle of Wight it was the coldest July for 35 years, and at Southport so cold a July has not been known for over 50 years. It was not until the 20th that the thermometer in Dublin touched 70° , and that on only two days. In 1921, July established a record for warmth in Dublin, in 1922 it established a record for coolness. In only a few places in Scotland did the thermometer reach 70° , the highest reading being 71° at Smeaton. In every other July for the past 60 years a higher maximum has been recorded. Mean temperature deviated from the normal from a deficit of 2.2° in the north of Scotland to 3.3° in the north-west, and south-west of England. The mean temperature of the Channel Islands was the same as the south-east of England, and less than half a degree higher than the eastern counties. The rainfall for the month over the eastern and western parts of England was unusually heavy. In Scotland and Ireland the fall was much nearer the normal, less than the usual

quantity being received in the south-west of Ireland, the south-west and north-west of Scotland. The general excess over England and Wales was about 50 per cent. Over considerable areas in Hampshire, Lincoln, and Norfolk double the normal was registered, reaching up to 283 per cent. at Norwich. The large totals for the month can in part be attributed to the widespread heavy fall of the 5th, where over England and Wales, with the exception of coastal strips in the west and south-east, more than 1.0 in. fell, while the amount reached more than 2.0 in. over a considerable area in the south of England on that day. Sunshine was deficient nearly everywhere. In the south of Scotland there was actually less sunshine than in any month since February.

August was dull, cool and unsettled, the cool and unsettled conditions which had prevailed since the middle of June continuing throughout the greater part of the month. Temperature was much below the average, and maxima of over 70° were comparatively rare. The month opened with squally and showery weather over the British Isles. This was followed by a series of depressions causing generally unsettled conditions on the 3rd and 4th. On the 6th there were thunderstorms and notably heavy rains in England, especially in the Midlands and the North where much damage was caused by extensive floods. More than 1 ins. of rain fell on the 6th over a strip which extended from Swanage to Worksop. There was very heavy rain in the southern part of Yorkshire on the 7th. At Sheffield, in the 16 hours ending at 4 p.m. on the 7th, nearly 4 ins. was measured. Some low temperatures were recorded on the 12th, among which was 30° at Balmoral. On the 19th there was a temporary improvement with warmer weather over the greater part of the country. Maxima on that day reached or exceeded 70° at some places, the most notable being in the east of Scotland where at Aberdeen 73° was recorded, and 75° at Logie Coldstone (Fife). Although temperature fell somewhat in Scotland next day, it continued fairly high over the eastern and southern districts of England. It was about this time that the warmest weather of the month was experienced, the thermometer on the 20th going up to 76° at Southend, to 77° at Jersey and 78° at Greenwich on the 21st. After this there was a renewal of unsettled conditions, and under the influence of north-westerly winds much lower temperatures were recorded. These conditions were maintained until the end of the month. At Carzen (Kircudbright) August was described as a dull, damp, disappointing month, and in Dublin the chief and outstanding characteristics were the clouded skies, lack of sunshine, and absence of summer warmth. Scotland has only once (in 1912) experienced an appreciably colder August during the last 60 years. The departure of the monthly mean temperature from that of the normal ranged from a deficit of 1.7° in Scotland to 3.1° in the south-west of England. The distribution of the month's rainfall, which was largely influenced by the heavy falls of the 6th and 7th, was irregular. The greatest amounts, which exceeded 4 ins. and in some places reaching to 6 ins., fell over a broad belt which extended from Cornwall to Cumberland through the Midlands. Many places in the latter district had more than twice the normal amount. Less than 2 ins. fell in East Anglia and the Fen districts, and less than an inch

locally in Essex. As a result of the cloudy and unsettled conditions the amount of sunshine was below the normal nearly everywhere, especially in the southern parts of England and Ireland. At the Kew Observatory only about 70 per cent. of the normal was recorded, the percentage of the possible being only 29. In the south-west of England the deficiency amounted to nearly 2 hours per day.

September. Throughout the greater part of the month the weather was cool and unsettled, the only periods of comparatively settled conditions being between the 3rd and 10th and for a few days round about the 23rd. At the beginning of the month there was heavy rain, and thunder locally. During a severe thunderstorm, which occurred at Blackpool during the early hours of the 1st, over 3 ins. of rain was recorded. On the 3rd and 4th the weather was generally quiet and dull. In the extreme west rain was falling on the morning of the 5th. It was from this date that the most prolonged spell of settled weather was experienced. Over the greater part of the British Isles the days were fairly warm, with night fogs. Temperature was slightly above the normal and reached 70° at several places. In Scotland 72° was recorded at Kilmarnock on the 4th, and at Paisley on the 8th. By the morning of the 9th a northerly wind had set in, and there was a decided fall of temperature, the thermometer going down to 24° on the 10th at West Linton (Peebles). Fresh or strong winds blew along the North Sea Coast, and rain fell

locally in the Eastern Counties. On the 12th there was heavy rain over the British Isles with gales in the Channel. During the next two days there were strong northerly winds, and thunder was heard in many places. Snow fell on some of the higher peaks in Scotland during this time. On the 18th the British Isles was again under a showery type of weather. There was much rain in Scotland followed by an improvement and lower temperature. At Ipswich the thermometer reached 70° on only one day, and during the last 20 years the total rainfall for the month has been exceeded on only one occasion. The amount of sunshine was more than 30 hours less than the average. The mean temperature of the month was everywhere below the average, maxima exceeding 70° being rare. Except in Scotland, where the temperature was decidedly low during the middle of the month, with frequent ground frosts, the night temperatures were not as a rule particularly low. The departure of the monthly means from the normal varied from 0.9 in Ireland north to 2.1 in the English Channel. Approximately half the area of the British Isles received less than the average rainfall. This area was mainly in the centre and south of England, the northern coast of Ireland and practically the whole of Scotland. The deficiency was nowhere large except in the Western Highlands, where little more than half the normal was recorded. In northern and eastern England the total for the month was in some cases 50 to 100 per cent. above the average.

Storms and Floods in 1921-22.

(1921) *November 1.* Violent N.W. gale in Southern Scandinavia. At Helsingborg part of pier with the lighthouses washed away. *2.* During a violent storm in the North Sea the Swedish steamer *Bellgrove* was sunk. *5.* The south coast of Finland was swept by a terrific storm and snow blizzard in the afternoon. Twenty-eight out of 30 persons drowned by the sinking of the *Kustavi* outside Hangö Harbour. *7.* Violent storms all round the French coast, particularly severe in the Mediterranean, ships being compelled to make for the nearest port for shelter. A storm of terrific violence at Flawil in the canton of Berne causing considerable damage. *17.* Two cyclones struck widely separated areas of the state of Arkansas, 12 people were killed and many injured. *20.* A severe thunderstorm at night in Sicily caused a stream near Messina to overflow its banks. The village of Saltona was flooded to a depth of 6 ft. and many persons were drowned. *26.* During a typhoon several towns in the Philippines were swept by a tidal wave, which caused more than 100 deaths and immense damage to crops and property. *27.* A cyclone destroyed all the sheds in the military flying camp outside Lisbon.

December 6. A north-westerly hurricane on the Newfoundland coast. *17.* A violent north-west gale accompanied by heavy rain along the whole of South Norway which increasing in fury caused serious damage. This storm was followed on the 18th by a flood which occasioned great havoc in Denmark. In Copenhagen many streets were flooded to a depth of several feet, and large tracts of low lying ground near the coast were inundated.

(1922) *January 11.* A hurricane in which the wind at times attained a velocity of 100 miles per hour swept over New York City. *15.* Snow

was general in France. Around Amiens the snow was accompanied by a violent gale. Melting snow caused the Bébre to overflow and flooded the houses near the river. *17.* A hurricane swept along the Portuguese coast at night causing enormous damage. At Mira a large number of fishing craft were wrecked. *19.* One of the thickest fogs ever experienced settled over New York and shipping was unable to enter the harbour. *26.* Owing to the intensity of the frost in Berlin, 3° F., the schools were closed. *31.* Violent storm off Murmansk in which the *Magneta* was sunk and 12 lives lost.

February 1. Vienna under 8 ins. of snow. *7.* Heavy fall of snow in Rome, an event which has not been previously known for several years. Over the whole of Austria and Southern Hungary there was an exceptionally heavy fall of snow. The town of Sarajevo was entirely cut off from communication. *8.* Fearful snow in Tuscany at night. Near Grosseto the snow fell to a depth of nearly 6 ft. The Orient express arrived at Milan 24 hours behind time. *10.* During the past week heavier snowstorms than ever remembered have swept across Hungary causing several trains to be snowed up. *12.* The steamer *Pannonia* arrived in New York from London, battered by 4 weeks continuous gales with her rudder gone and crew exhausted after encountering three separate hurricanes. *24.* Chinde, the port at the mouth of the Zambesi, was struck by a disastrous cyclone followed by torrential rains in which was a cloud of sand caught up by a terrific swirling wind. It was the worst catastrophe of its kind that has ever happened on the East Coast of Africa. Steamers and barges were sunk, storage sheds at the Customs destroyed and Chinde practically wiped out.

April 11. By the breaking up of the ice on

the River Dvina the town of Dvinsk was flooded, the water rising to a height of nearly 33 ft., about 1,000 persons were drowned. 16. Owing to the flooding of the River Aire, Lully near Geneva and a large tract of the surrounding country was under 2 ft. of water. It was the first flood since 1888. 20. A series of tornadoes swept across various villages in Illinois, Indiana and Arkansas, during which hundreds of people were injured.

May 10. The rising of the Assiniboine River flooded thousands of acres of land. In an area of 50 miles to the west of Winnipeg the water was 4 ft. deep: by the 12th many thousands of acres of wheatland were under water.

June 1. Terrific gale with blinding and driving rain at the southern end of Great Barrier Island. 2. Following a spell of excessively hot weather Paris experienced an exceptional rain storm with thunder and lightning. 11. New York was visited by a hurricane of which the City records are without a parallel. The storm came like a bolt from the blue. Wind funnels, waterspouts and terrifying lightning in a few minutes devastated whole districts. 12. Following several days of exceptionally heavy rain a part of the city of San Salvador was partially destroyed by a sudden torrent of water caused by the breaking of the river banks. 20. A violent thunderstorm broke over Sofia, causing much damage. Many houses collapsed and a large number of cattle were drowned in the floods. 23. A destructive storm of wind came down from Eastern Saskatchewan and went on to the Ontario boundary destroying property valued at many thousand dollars. A terrific storm and torrents of rain devastated Bistrihza in Transylvania. The whole village was destroyed.

July 5. Torrential rains fell in Paris at night. The wind coming down the Boulevards played havoc with the plane trees strewing the roadway with branches. During a violent thunderstorm in the Dijon district the church of Pemières was struck by lightning and set on fire and burned until only the outer walls were left. 31. By the end of the month the highest flood known for the last 20 years was slowly moving down the Murrumbidgee river, and had inundated

Wagga Wagga, covering the streets, the parks, and the race-course. Business and private houses were surrounded by water stretching away for miles.

August 2. A hailstorm caused great damage to crops and vines in the cantons of Vaud and Berne. A typhoon visited Swatow, starting at 10 p.m. and lasting till 4 a.m. on the 5th, during which there were intermittent gusts of terrific violence. The waters rose quickly until the Bund was submerged under from 6 ft. to 8 ft. A steamer was blown ashore 2 miles from its anchorage. The loss of life was estimated at 50,000. The tidal wave progressed a considerable distance inland adding to the loss of life and destroying food supplies. A junk was driven right through the Asiatic Petroleum Company's oil tank, and a motor boat was found 5 miles inland. 14-15. Violent hailstorms occurred in the Meuse and Saône-et-Loire Departments. At Bar-le-Duc hailstones, many as big as eggs, smashed in a large number of windows. 30. A cyclone accompanied by heavy hail caused great damage to vines in the neighbourhood of Agen and also near Bayonne. The crops in many places were almost entirely ruined.

September 2. A violent typhoon lasting 36 hours broke over Chefoo (Shantung). A number of Chinese buildings were destroyed and part of the concrete embankment was demolished. 21. The worst hurricane experienced in all its history swept over Bermuda causing an enormous amount of damage. An abnormal high tide invaded many houses. H.M.S. *Constance* broke her moorings and the light cruiser *Cape Horn* was flooded. 22. An extremely deep cyclone caused terrific gales over the north-east Atlantic. At about 8 a.m. the *Aquitania* encountered a gale of about 50 m.p.h. which by the early afternoon had increased to over 75 m.p.h. The fury of the wind and the mountainous seas compelled the vessel to go dead slow. 23. At about 3 a.m. a terrific thunderstorm was raging at Monte Falconara about 8 miles from Spezia. The lightning struck the fort causing the powder magazine to explode. The nearest village, that of San Terenzio, was almost entirely blown to pieces.

BRITISH ASSOCIATION.—The Ninetieth Annual Meeting of the British Association for the Advancement of Science began at Hull on September 6. Sir Charles S. Sherrington, who succeeded Sir Edward Thorpe as President, dealt in his Address with "Some Aspects of Animal Mechanism." The following were the Presidents of the various sections:—*A*, Mathematics and Physics, Prof. G. H. Hardy; *B*, Chemistry, Principal Irvine; *C*, Geology, Prof. P. F. Kendall; *D*, Zoology, Dr. E. J. Allen; *E*, Geography, Dr. Marion Newbigin; *G*, Engineering, Prof. T. Hudson Beare; *H*, Anthropology, Mr. Harold Peake; *I*, Physiology, Prof. Cathcart; *J*, Psychology, Dr. C. S. Myers; *K*, Botany, Prof. H. H. Dixon; *L*, Education, Sir Richard Gregory; *M*, Agriculture, Lord Bledisloe. Five public lectures to citizens were given:—Dr. A. Smith Woodward on "The Ancestry of Man"; Dr. E. H. Griffiths on "The Conservation and Dissipation of Energy"; Sir Westcott Abell on "The Story of the Ship"; Prof. A. P. Coleman on "Labrador"; and the Rev. A. L. Cortie on "The Earth's Magnetism." Evening Discourses were given by Dr. F. W. Aston on "The Atoms of Matter, their Size, Number, and Construction," and by Prof. Walter Garstang on "Fishing: Old Ways and New." For the first time, special lectures were arranged for the children in the upper classes in the secondary and other schools in the city, and these were given by Prof. H. H. Turner on "The Telescope, and what it tells us"; Prof. J. Arthur Thomson on "Creatures of the Sea"; and Mr. F. Debenham on "The Antarctic." In 1923 the Association will meet at Liverpool, under the presidency of Sir Ernest Rutherford, and in 1924 at Toronto.

AMAZONIAN BASIN AND HEALTH.—Dr. F. L. Hoffman, in a report to the American Meteorological Society, combats the view that the basin of the River Amazon is an unhealthy region. The climate, he says, is warm throughout the larger portion of the year, but the warmth is limited mostly to the daytime, while the nights are often distressingly cool. The chief causes of ill-health in northern South America are apparently not tropical diseases but respiratory and rheumatic affections. Chilly nights cause ill-health and result in a high mortality. It is estimated that the night temperatures are about 30° lower than the day readings. Humidity, it is stated, is far from being such a serious detriment to health and comfort as is assumed, but when a high humidity coincides with a high temperature a considerable increase in infant mortality occurs.

ASCENT OF SAP.—Sir J. C. Bose has carried out a series of experiments on the ascent of sap, at the Bose Institute, Calcutta. He has been able to show that the ascent of sap is a process of physiological activity dependant on the pulsation of living cells, inasmuch as it is arrested by the action of poison, either in entire plants or in cut shoots. The active pulsating cells are not confined to the root, but are continued throughout the stem. The ascent takes place in plants even in the complete absence of transpiration. In "varnished" plants this velocity has been found sometimes to be as high as 70 metres per hour. The cellular pulsations consist of alternate contractions and expansions. The direction of propulsion is determined by the phase differences of the adjacent cells. The velocity increases with the wave length of the propagated impulse,

and enhancement of velocity is associated with corresponding increase in the wave length. The enhanced rate of ascent is also attended by the increase of amplitude and frequency of cellular pulsations. The ascent of the sap depends on cellular pulsation in tall trees as well as in herbaceous plants. There is, however, in the former the special adaptation of the woody tissue which serves as a reservoir to meet the excessive demand for water in the season of active transpiration.

BIRDS SIPPING NECTAR.—Mr. P. M. Debharman, of the Royal Botanic Gardens, Sibpur, Calcutta, records that the flowers of *Castanospermum australe*, a tree of Australian origin, are visited by the nectar-sipping bird *Mirafra assamica* in India. The beak of this bird is not sufficiently long to reach the nectar in the calyx cups, so the bird appears to have adopted the practice of biting off the fleshy petals which obstruct it.

BIRTHDAYS AND INTELLIGENCE.—Mr. M'Callum Fairgrieve has experimented with 368 boys, ranging from 10 to 18 years of age, with the object of discovering, if possible, whether the time of the year of birth had any relation to their intelligence. It would appear from the results that boys born in the late spring months are in danger of developing less intelligence than those born about October.

BRIDGE ACROSS THE DETROIT RIVER.—Work is expected to start soon on the construction of a great international suspension bridge spanning the Detroit River and uniting Michigan and Ontario with its terminals, one in Detroit and the other in Windsor. The bridge is estimated to cost \$30,000,000, and to take 4 years to build. It will have a span of 1,802 feet, the longest in the world, exceeding those even of the famous Quebec Bridge, the Williamsburg Bridge in New York City, and the bridge over the Firth of Forth. The anchors of the bridge will be sunk to a depth of 140 feet. The bridge will eliminate the present congested ferry system across the Detroit River. Eight parallel cables will carry the highway and railway decks. The highway, or upper deck, will have a width of 97 feet, providing space for two trolley tracks, two footpaths, and two roads sufficient for six lines of vehicular traffic. The engineers estimate that the bridge will be sufficient to accommodate 30,000 motor vehicles per annum. On the lower deck there will be room for four tracks of electric trains, and in addition a space of 20 feet for wires, pipes, and cables. The bridge will be 97 feet clear above the river, allowing ample clearance for the Great Lakes shipping, and the two towers of the structure will rise 380 feet above the level of the stream.

BRIDGE ACROSS SYDNEY HARBOUR.—A cantilever bridge across Sydney Harbour has been projected in order to accommodate the growth of the city. It will consist of steel cantilevers with shore and harbour arms, each 500 feet long, and a central suspended span of 600 feet. The clear span from centre to centre of the main piers will be 1,600 feet. It is proposed that the bridge will carry four lines of railway, a main roadway 35 feet wide, a motor roadway 18 feet wide, and a footway 15 feet wide. The total length, including the approach spans, will be 3,816 feet; the headway required for shipping will be 170 feet at high water for the central 600 feet of the bridge.

CLOTHING FOR THE TROPICS.—Mr. G. W. Grabham, Government Geologist at Khartoum, has conducted a number of observations on the heat-retaining qualities of differently coloured fabrics and paints. He found that the darker fabrics retain heat to a strikingly greater extent than lighter colours. Taking the mean for the whole day there was a difference of approximately 47 degrees F. between black cloth and white cotton. The khakis varied according to their shade and texture, but were all much worse than the whites. Every "solaro" (a variety of khaki), believed to have a special efficacy in resisting heat, was 26 degrees F. worse than white drill. Similar experiments made on paints in common use showed that the best protection against heat is common whitewash. Green proved an unexpectedly high retainer of heat, while red was relatively good.

COLORADO RIVER CHECKED BY DAM.—What is claimed to be the greatest dam of modern times has been designed for the Colorado River at Boulder Cañon, where it will hold back the normal flow of the stream for more than a year. The water thus saved will be used for irrigation, to be let down the channel as needed, and in quantity which may assure a return of river navigation. The greatest irrigation development the western continent has known will come through the utilization of the waters of the Colorado River, one of the greatest streams in America, with an annual discharge rarely running below 16,000,000 acre feet, or enough to assure the irrigation of about 5,000,000 acres of land. No fewer than seven States are interested in the disposition of its waters.

CONTINENTAL DISPLACEMENT.—Much interest has been excited among physicists and geographers by Professor Wegener's views on continental movement. His thesis is that continents are of lighter material, and float like icebergs on a heavier plastic which reaches its highest level at the bottom of the oceans. The poles are not fixed relative to the plastic, and have occupied widely different positions, as when Central Europe was a desert. Under the influence of gravitation land masses move away from the poles and westwards. Thus in South and North America the westward drift has heaped up the Rocky Mountains and the Andes. The South Atlantic appeared early, but the northern part did not exist until more recent times. At the great Ice Age, in fact, the glaciation in both hemispheres was due to an ordinary polar ice cap. India once stretched over the Indian Ocean, being united to Australia and Africa, and since that period the Himalayas have been piled up, and Australia has left New Zealand far behind.

COTTON IN THE FRENCH SOUDAN.—The shortage of raw cotton for the mills of France, due to the partial failure of the supply from the United States, has led to the formation of a plan for growing cotton in the French Soudan. It is proposed to irrigate certain areas on both banks of the Niger in the vicinity of Segou, and connect them by rail with both Grand Bassam and Dakar. On the left bank the Nyamina irrigation canal would leave the Niger near Bamako, the rail-head of the line from Dakar. A barrage would be erected at Sotuba and another at Sansanding, 25 miles below Segou, from which the Sansanding Canal would run eastward for 140 miles. Land

on the right bank would be irrigated by the Segou Canal and its branches, which leaves the river at the Sotuba barrage. These schemes would give 10,000 square miles of irrigated alluvial ground.

CYCLONES.—Dr. E. Kuhlbrodt has contributed to "Die Wissenschaften" an account of the present state of the theory of cyclones with which V. Bjerknes and his son are associated. According to Dr. Kuhlbrodt the north polar regions are covered by a cap of cold air which thins out as it extends downwards into temperate latitudes and ends in general about latitude 40°, but may disappear at latitude 50° over a few degrees of longitude. Above the cold cap is a considerable thickness of warm air derived from the south and having a motion to the east. Where the surface of separation of warm and cold air comes down to the earth's surface at an unusually high latitude a cyclone is produced, which is carried to the east by the movement of the warm air. The distribution of wind and weather to be expected in such a region is shown to be in agreement with observation.

DAM ON THE DORDOGNE.—A number of hydro-electric stations are to be erected on the River Dordogne, which rises in the Auvergne mountains and discharges into the estuary of the Gironde below Bordeaux. It is intended to derive from that source over 110,000 continuous horse-power, and for that purpose it is proposed to construct three dams, one of which will be among the highest structures of the kind. Its total height from the lowest point in its foundations to its crest will be 374 feet. It will hold up 715,000,000 cubic metres—or 157,326,000,000 gallons—of water, the lake formed by it having a surface of 2,650 acres. The cost will be about 100,000,000 francs.

DYEING SIMULTANEOUSLY IN TWO COLOURS.—The chemists at the Manchester laboratories of the British Dyestuffs Corporation have found a new class of dye materials, known as "ionamines," which will allow a white material to be simultaneously dyed in two colours. Ionamines will only act on real silk or artificial silk, known as "acetyl silk," and are ineffective as cotton dyes. Thus it is possible to dye a mixture of silk and cotton in two different colours by selecting a dye which has an affinity for cotton and mixing it with one of the ionamines. In this way the cotton will be dyed the one colour and the ionamine will act only on the silk fibre. According to Prof. Arthur G. Green, Director of the British Dyestuffs Corporation laboratories, there is an almost infinite range of variations of this process, as the majority of dyestuffs having an affinity for cotton are ineffective on acetyl silk, whereas the ionamines will only dye this material and nothing else. Prof. Green says: "By a suitable choice of cotton dyestuffs and ionamines it is possible to produce by subsequent chemical changes on the fibre a still greater range of shades and at the same time increase their fastness."

ELECTRIFICATION OF THE CENTRAL RAILWAY IN BRAZIL.—The Brazilian Government has granted a loan of \$25,000,000 to a New York firm for the purpose of electrifying the Central Railway. The system extends to over 1,200 miles, and the conversion of a small portion of the main line is to be dealt with as a preliminary step. The start will be made in the suburbs of

Rio de Janeiro, and it is expected that it will consume a period of two years. In the case of the Paulista Railway, the only electrified line in Brazil, the Government estimates that the cost of conversion will be met in ten years by saving in fuel, as coal and wood are very expensive. In like manner it is believed that if the Central Railway, when electrified, is operated at even 70 per cent of its capacity, it will, for the first time in its history, be able to pay a dividend as high as 8 per cent.

FINGER-PRINT FORGERY.—Mr. J. C. Goodman contributes to "Dactylography" an article on the methods taken by criminals in the forgery of finger-prints. The criminal must first obtain specimens of the prints of the dupe on whom he intends suspicion to fall. This he does by arranging that the dupe leaves his prints on a glass, or on a piece of polished furniture, after which the prints are photographed. One method of forging involves the use of a rubber stamp, where a facsimile of the original is reproduced on the rubber by means of transfer paper, and the surrounding rubber deftly pared away with a sharp knife. The second method is to take a negative cast of the finger to be forged by pressing it into a mould of soft wax, plaster of Paris, clay, or even bread. A third process involves photographing a photograph of the prints to be forged on a reversed plate, which is clamped to a duplicate plate made of gelatine mixed with bichromate of potassium. The two are exposed to the light, with the photographic negative nearer to the light, and the sensitized surface touching the gelatine.

FISH FALLING WITH RAIN.—Dr. E. W. Gudger, writing in the official organ of the American Museum of Natural History, reviews the history during four centuries of the stories of fish falling with rain which have appeared in different parts of the world. He accepts such stories as well authenticated. He accounts for such showers as due to the agency of high winds, whirlwinds and waterspouts, which could easily draw up from the sea or from rivers any small fish swimming at the surface in the track of these uplifting agencies. As their force is spent they distribute their victims along their path.

FLAX FLEA-BEETLE.—Mr. J. G. Rhynshart has contributed to the "Proceedings of the Royal Dublin Society" the results of his researches into the life history of the flax flea-beetle, a serious enemy to flax and one responsible for considerable loss to Irish growers of the crop. The flea-beetle is commonly found throughout Ulster, and of recent years has become a pest in flax-growing districts in Co. Cork. The adult beetle kills many of the seedlings by eating the cotyledons and growing-point of the flax, but will also consume clovers, grasses, and wild species of flax. The larvæ bore into and feed on the roots of the flax plants, but do not appear to cause any appreciable hindrance to growth.

FLIES DISPERSED BY FLIGHT.—Messrs. Bishopp and Laake have conducted a series of experiments for the purpose of ascertaining the extent of the dispersal of flies by flight. They took a number of flies, estimated roughly at 234,000, and marked them by turning them loose into bags containing powdered red chalk or paint pigment. The flies were afterwards allowed to escape. In order to ascertain the distance of dissemination, baited fly-traps were

set at measured distances, in different directions, from the point of liberation. The experiments showed that under rural and urban conditions flies have marked powers of diffusion. The common house fly, *Musca domestica*, was recaptured more than 13 miles from the point of liberation, *Chrysomya macellaria* 15 miles, and *Phormia regina* nearly 11 miles. The fact that many favourable feeding and breeding grounds were passed over by the flies appears to indicate that very evident migratory habits are noticeable. The speed of flight is evidently considerable; thus, *Phormia regina* was recovered about 11 miles away in less than 48 hours after release, and *Musca domestica* travelled over 6 miles in less than 24 hours.

FLINT WORKSHOPS IN INDIA.—Mr. T. H. Vines, in an article on "Man," announces the discovery of flint workshops in the hills overlooking the North Indus valley. Since Mr. Le Mesurier found a stone implement in India in 1861 few specimens have been discovered which have been associated with the remains of extinct animals. The North Indus valley specimens consist of cores and broken chips, with a yellowish-brown fabrication and lustre. Flint knives and other tools of a whitish colour have been found in considerable numbers in the ravines of the hills. It is suggested by Mr. Vines that the strata containing these implements correspond with the area in Egypt where implements of the same type have been discovered by Professor Seligman.

GALVESTON CAUSEWAY REBUILT.—The Galveston Causeway, two miles long, connecting the port with the mainland (which was damaged by a great storm in 1915), has been rebuilt and re-opened for traffic. The causeway is 10,685 feet long and 63 feet wide. It carries three railroad tracks. It is supported on 107 arches, built on piling driven 40 feet below the bed of the clay. The rehabilitation has cost one million dollars, bringing the total expenses involved in the original structure and its rebuilding to more than three million dollars. After the storm of 1900 the city built the sea wall, and erected the causeway on concrete arches. It included a drawbridge in the centre to allow the passage of ships on the intra-coastal canal. Because of the shortage of funds the approaches were less substantial, and both ends were washed out in the storm of 1915. The centre part and the drawbridge stood, and now the entire causeway has been brought up to that standard of construction.

GLASS THAT IS UNBREAKABLE.—A Bohemian firm of glass makers claim that after many years of experiment they have perfected the manufacture of unbreakable glass. And not only is it unbreakable, they say, but it can also be used for cooking. Tumblers, it is stated, have been placed on a red-hot stove, wood has been lighted in them and reduced to charcoal, and they have come to no harm. Others, again, have been thrown heavily on the floor and received no injury. The nearest thing to unbreakable glass that has hitherto been known was the toughened glass which was invented by a French firm half a century or so ago. It was not, however, a success, owing to its tendency to fly into powder after a sudden shock. Sometimes a toughened glass tumbler could be thrown downstairs without being injured, but the next time the

experiment was tried it would break to pieces. Some English firms turn out a flint glass with a high percentage of lead which will stand great changes of temperature and a great deal more knocking about than is usual.

HEART-TESTING MACHINE.—Lieut.-Col. Heald, of the Air-Service, who was engaged in testing and training the sensory organs of airmen during the War, explained to the Royal Society how he was taking airmen's weights on a broken-down penny-in-the-slot machine when he noticed that the dial-hand moved up and down in time with the beating of the heart. Every heart-beat pushed the body outwards and showed a definite recoil of the body. It occurred to him that the exact energy of the heart could be tested by any machine delicate enough to take and record the force imparted to the body by the blood movements. He and Major Tucker finally found such an instrument in the microphone used for finding the locality where gunfire was produced. This machine in the War was so accurate that it would give the locality of distant guns to within 25 yards.

HOBART WATER SUPPLY.—Mr. Herbert E. Bellamy, City Engineer, has prepared a scheme for an improved water supply to Hobart, Tasmania. The most interesting feature of which is that he proposes to conduct the water, by gravitation, through a high-pressure pipe line to the old receiving house situated at 531 feet above the sea level, and thence to feed the present upper and lower reservoirs. The upper reservoir is 502 feet and the lower is 450 feet above sea level respectively. The total length of the proposed aqueduct is 54 miles, and it will consist of only one class of work, namely, inverted syphons of steel pipes. The pipe line will follow closely the irregularities of the ground, and will also take a fairly straight course. The working pressure for several miles will be 350 lbs. per square inch. The size of the proposed main from the Humboldt River to Mount Fenton will be 24 inches in diameter, and from Mount Fenton to Hobart 27 inches in diameter. The thickness of the steel pipes will not be uniform throughout the aqueduct, but will vary from $\frac{3}{8}$ to $\frac{1}{2}$ of an inch according to the working pressures encountered.

INDUSTRIAL MOTION.—Mr. Eric Farmer has given, in a report of the Industrial Fatigue Research Board, a summary of previous work on time and motion study in industry. As the result of his own observations, in industries such as the making of sweets, he concludes that the most important principle of motion study is rhythm rather than speed. The best set of movements is not the quickest set, which may cause too much strain on the workers and produce undue fatigue, but the easiest set. It is better to make the movements of the hands required in an industrial operation in curves, without sudden changes of direction, rather than in straight lines. Increased production invariably occurred when a proper system of movements was introduced. In the instances quoted it went up from 38 to 50 per cent.

LONDON SKULLS ALTERING.—Professor F. G. Parsons, in the journal of the Royal Anthropological Institute, has discussed the relationship of the Long Barrow race to the modern inhabitants of London. He believes that the shape of the skull is the result of vital or physiological

forces, imperfectly understood, acting on it for a very long time; but that the shape, once established, is very permanent, and most of its characteristics remain for thousands of years after the race bearing them has changed its habitat. Even when the race has been practically bred out by competing races, better adapted to the changed conditions, the old characters reappear from time to time, sometimes singly, occasionally all together. For example, the skull of Jonathan Wild reproduces all the characters of the Long Barrow race. "The skull of the modern 20th-century Londoner," says Professor Parsons, "has changed from that of the 18th, but it is in the direction of increased breadth and shortness, and the change is due, I believe, to admixture with the Central European or Alpine race, which in the last two centuries has been pouring into this country in ever-increasing quantities."

NIAGARA HARNESSSED STILL MORE.—The largest single hydro-electric generating station in the world is said to be at Queenston, Ontario, which has been built at a cost of £8,000,000, to ensure the output of 650,000 horse-power from the Niagara Falls. Every second 15,000 cubic feet of water will be drawn from the Niagara River. The turbines are each capable of developing 60,000 horse-power, when the wheels make 187½ revolutions a minute. The actual head of water under which they work is 305 feet, so that 22 feet only of the total available difference in the levels between Lake Erie and Lake Ontario have not been turned to account. Of this total loss 10 feet occurs in the Upper Niagara River from Lake Erie to Chippawa, and in the lower river from Queenston to Lake Ontario respectively. The outstanding loss of 22 feet is required to carry the water through the canal. With the 305 feet head every cubic foot of water per second flowing through the canal develops 30 horse-power.

NOTTINGHAM A PORT.—Work has begun in widening and deepening the Trent between Nottingham and Newark, and when completed the navigation of the river will be so greatly improved that Nottingham will have become a port. The scheme will render it possible for boats of 120 tons to go to Nottingham at a comparatively small cost, and a great step will have been taken in developing the inland waterways of the Midlands.

RHINE AND DANUBE CANAL.—The scheme for connecting the North Sea and the Black Sea by a new waterway between the Rhine and the Danube is rapidly passing into the realm of practice. Plans have been prepared and there is an expectation that the work may be completed within the next ten years. The Rhine is navigable from its mouth to Strasbourg, and this will constitute one of the segments of the great waterway. The other would be the long arm of the Danube, which is navigable from its mouth as far up as Ulm. The proposed canal would leave the Rhine at Mayence, and, following the line of the Main, would pass through Frankfort and Aschaffenburg. Beyond Aschaffenburg, it would cut across the bend of the Main above Wurzburg, and, picking the river up again some distance north-west of Bamberg, would finally leave the Main at that city and strike south-south-east for Nuremberg and Beilngries, finally reaching the Danube at Kelheim. The canal, throughout its entire length, would be capable of accommodating shipping up to 1,500 tons.

ROCKALL.—One of the chief aims of Dr. J. B. Charcot when he visited Rockall in June, 1921 (as recorded in "WHITAKER," 1922), was to obtain rock samples in the hope of throwing further light on the origin of this curious rock, which lies 200 miles west of the Hebrides. In this Dr. Charcot was successful, and to an account of his experiences in "La Geographie" for May, 1922, is added M. A. Lacroix's report on the geological collections. The prevailing rock of the island is a coarse-grained aegirine granite of an unusual but not unique type. The "rockallite" described by Prof. J. W. Judd some 25 years ago turns out to be relatively rare. It is a fine-grained rock with more aegirine than the normal granite, and it occurs only in patches. Previous to Dr. Charcot's visit the only rock specimens from the island were "rockallite." All the rocks contain elpidite, which is known also in certain beds in Greenland. Dredgings in the vicinity of Rockall brought up basaltic rocks, probably the remains of a submerged plateau of basalt.

ROLLER BEARINGS FOR TRAINS.—A new roller bearing for railway coaches has passed its preliminary trials on the Great Eastern Railway. It was shown that whereas six men were required to move a stationary 27-ton coach on a dead-level track, one man could easily push a similar vehicle fitted with the new wheel boxes. The officials of the company interpret this to mean that on a train fitted with these bearings a saving of 25 per cent. in coal could be effected, and the wear and tear in locomotives and the permanent way would be greatly reduced. The new bearing has been made possible by the use of a particularly hard but not brittle steel. Hitherto the rollers have quickly worn and become conical. Each of about a dozen rollers which are locked in one bearing by a sort of bicycle chain will stand a strain of 21 tons.

SEA DEPTH MEASURED BY SOUND.—Extended trials have been made by Dr. Hayes, on board a U.S.A. destroyer, for measuring the depth of the ocean by means of sound waves reflected from the bottom. A short explosive signal is made at the ship's hull and the time of this and the reflection from the bed of the sea are recorded. Corrections are made for temperature effects on the velocity of transmission of the signal. In the experiment by Dr. Hayes the outline of the sea bottom on a traverse between Rhode Island and Gibraltar is said to have been charted and minute records between Josephine and Tysburg Banks obtained. The bottom here is an extensive plain, bordered by mountains and tablelands rising to a height of 4,000 feet above the plain, and containing several unrecorded deeps.

SEAMEN'S RISKS.—Mr. J. W. Verdier, in a paper read before the Royal Statistical Society, gave comparative estimates of shipping casualties and loss of life at sea, based on the recorded deaths by accidents in the five years ended 1913. The yearly death-rate, he said, was 4.05 per thousand seamen employed compared with 1.56 for underground workers in coal mines, and 0.59 for railway servants. It is estimated that the number of deaths per million man-hours of employment was 0.97 for seamen, 0.68 among underground workers in coal mines, and 0.20 among railway servants. Assuming that, in the foreign trade, sea-passengers are at sea for twenty days on the average, and that railway

passengers (excluding season ticket holders) are on the train for about an hour, Mr. Verdier estimated that in the period about 1900 the railway passengers' deaths were 0.12 per million passenger-hours, while the sea passengers' were 1.5, or more than twelve times as great. In the period about 1910, the railway passengers' deaths were about 0.1 per million passenger-hours, and the sea passengers' 0.3, or three times as great, showing that there has been a general progress towards safety.

SHIP CANAL TO THE GREAT LAKES.—An ambitious project has been set afoot for enabling ocean-going vessels to reach the ports on the shores of the Great Lakes of North America, and there to ship and discharge their cargoes without any intermediate handling. At present vessels loaded with grain at the great depôts of Port Arthur, Fort William, Duluth, and Superior, on Lake Superior, and of Chicago and Milwaukee, on Lake Michigan, are unable, on account of the rapids on the St. Lawrence, to proceed further than Buffalo, at the lower end of Lake Erie, where the grain has to be transferred either into barges to proceed along the Erie Canal to New York for reshipment or into small ships capable of traversing the Welland Canal as far as Montreal, where again reshipment is required for the ocean journey. The necessity for transshipment can be avoided only by the formation of a waterway for ocean-going vessels, and, as contemplated in the proposed scheme, this means the enlargement and deepening of the Welland Canal from a depth of 25 ft., to which it is at present being increased to a depth of 30 ft., and the construction of four lateral canals and impounding dams at the rapids on the St. Lawrence River, together with the deepening of the river-bed itself. By the construction of the dams a considerable amount of hydro-electric power could be developed.

SILK WEAVERS' FATIGUE.—Mr. P. Elton, on behalf of the Industrial Fatigue Research Board, has been analysing the differences in the output of individual silk weavers. He lays it down that a weaver must have good eyesight, dexterity of both hands, and a delicate sense of touch. It takes at least two years to teach a girl to weave quickly and well, but owing to methods of faulty training in the past it has been found that the slowest operatives produce only half as much as the quickest operatives.

SMOKING PIPES IN THE EARTH.—Mr. Henry Balfour contributes to "Man" an article on the various types of "earth-pipes" used in South Africa and Asia. In India, for instance, coolies on the march who are unable to make use of the common hookah, make a small tunnel in the earth, set a little tobacco alight at one orifice, and each man in turn, kneeling on the ground, sucks up the smoke at the other end. In South Africa, says Mr. Balfour, the pipe is either built up on the ground-surface or excavated below it. In Balistan the tunnel is made by thrusting in and then withdrawing a stick from the earth which has previously been patted down. In Natal and Rajputana, where the pipe is a tapering tube of baked clay, sun-dried mud, or camel dung, the wider end serves as "bowl," the narrower as mouthpiece, and there is no demarcation between the two, the bore tapering gradually from one end to the other. Mr. Balfour supposes that the similarity of practice

between Africa and Asia represents a cultural link between the two widely-separated areas.

STONE AGE VILLAGE IN CANADA.—Mr. William P. Ferguson, at the head of the Ferguson archaeological expedition, working on Isle Royale, Lake Superior, unearthed in September the remains of a large Stone Age village, covering many acres of the dense forest on both sides of the Sibley River, near Graham Falls. The age of the ruins, as shown by the trees growing on them, cannot be less than 1,000 years, and may be 2,000 years. The Ferguson expedition was organised, with the encouragement of the Museum of Indian Antiquities and the National Geographical Society of the United States, as a result of the discovery of the site of a prehistoric village on the island by Gilman, one of the early explorers.

STRAW CROSSES AND THE SWASTIKA.—Miss E. Andrews, in a paper contributed to "Man," discusses the rude bundles of straw or rushes, in the form of crosses, which are often found hung over the doors in many parts of Ireland on St. Brigid's Day, the February festival which marks the beginning of spring. She suggests that they have a close connection in form with the Swastika, and infers that we may see in them a symbol used in pagan times to represent the sun emerging from the darkness of winter. Harit Krishna Deb, in the "Journal of the Asiatic Society," suggests that the Swastika is a modification of the mode of expressing the ancient Hindu syllable Om, used in religious rites. This, a pothook with square ends, was duplicated, one across the other, to form the Swastika,

meaning "bringer of blessings," which goes back in India to the 7th century, when it was used as a cattle-mark. Another reference is found on gold leaf on a vase with relics of Buddha, and it appears on the Edicts of Asoka (273-232 B.C.). The earliest example known is on a spindle whorl from the third city of Troy, about 1800 B.C., and it is frequent in Greek vases about 600 B.C.

X-RAY EXAMINATION OF TEXTILES.—Messrs. Truesdale and Hayes, working in the research laboratory of the Dunlop Rubber Company at Birmingham, have invented a method of studying, by the aid of radiography, the movement in the threads of the canvas of a motor-tyre during its several processes of manufacture. The canvas was specially woven so that every twentieth thread, both warp and weft, had been previously impregnated with a heavy salt. Thus the X-ray photograph reveals a series of squares, the pattern being in the form of a check. The most suitable salt for the purpose was found to be lead chromate formed by precipitation on the yarn by first soaking in lead acetate and then in potassium bichromate. As the series of reproduced radiographs shows, the dimensions of the sides and angles of the squares are affected in some of the processes. By measuring the squares on the radiograph taken after each process the change due to the previous process can be arrived at. The method is said to be an effective means of ascertaining whether the stretch of the canvas threads, due to the various processes in the manufacture of the tyre, is within the limits of stretch tolerated by the yarn—a point of great importance to the tyre manufacturer.

Art in 1922.

THE first important exhibition of the year, held at Burlington House in January and February, was composed of selected works by thirty-six members of the Royal Academy deceased since 1889. The collection, which did not include pictures by deceased members whose work had been shown at previous winter exhibitions, attracted a good many visitors although it was by no means representative.

At the summer exhibition of the Royal Academy many more works were shown than in 1921, when owing to the unusual severity of the Hanging Committee many well known painters were unrepresented. The total number of exhibits was 1,464, of which 1,222 were contributed by non-members, whose pictures, drawings and models were examined by a committee composed of the President (Sir Aston Webb), Mr. Adrian Stokes, Sir R. T. Blomfield, Mr. George Henry, Sir William Orpen, Mr. Alfred Drury, Sir William Llewellyn, Mr. H. S. Tuke, Mr. George Harcourt, Mr. C. L. Hartwell, Sir Robert Lorimore and Mr. Malcolm Osborne. The Hanging Committee was composed of the same artists with the exception of the President, Sir William Orpen, and Sir Robert Lorimer.

No fewer than eleven works were purchased for the Chantrey collection:—"Changing Pastures" (£650), by Edward Stott; "Portrait of the Artist" (£262 10s.), by Charles Keene; "Miss Martineau's Garden" (£30), by James Sant;

"Hammersmith Bridge" (£500), by Walter Greaves; a bronze bust, "Nan" (£200), by J. Epstein; portrait of Sir Francis Chantrey (£147), by John Jackson; "Summer" (£262 10s.), by Philip Connard; bronze bust of Cardinal Manning (£105), by J. Havard Thomas; "A Waterfall" (£30), by J. D. Innes; portrait of Mrs. Raynes (£400), by P. Wilson Steer; and a marble statue "Psyche" (£1,000), by Alfred Turner.

All things considered the sales at the Academy were by no means bad, although not to be compared with those of some of the pre-war years, when pictures were sometimes disposed of at much larger prices than are obtained to-day. In the year under review the following were among the principal works sold. "Morning Splendour" (£630), by Mr. H. S. Tuke; "The Light Incarnate" (£600), by Mr. Frank Dicksee; "The Manger" (£200), by Mr. J. Clark; "The South Cone" (£250), and "Whitby: Low Water" (£250), by Mr. W. L. Wyllie; "Under the Blossom" (£250), by Sir David Murray; "Interior" (£210), by A. van Anrooy; "On the Fringe of a North Easter" (£200), by Mr. Charles Simpson; "Summer Day in the Scilly Islands" (£250), by Mr. Julius Olsson; "The Lion Pekinese" (£262 10s.), by Sir John Lavery; "A May Morning: View of Nottingham" (£630), by Mr. Arnesby Brown; "A Dedham Landscape" (£450), by Mr. Algernon Talmage; "H.M. Yacht Britannia rounding Lymington Spit Bay in a

"Squall" (£400), by Mr. Norman Wilkinson; "The Blue Dress" (£210), by Mr. L. Campbell Taylor; "A Tale by the Way" (£262 10s.), by Mr. Harry Watson; and the small "Morning in November" (£157 10s.), by Mr. George Clausen. The pictures marked sold, but with no prices affixed, included "The Yacht Race," by Mr. Arnesby Brown; "The Royal Wedding Day: 28th Feb., 1922," by Sir John Lavery; "A Worcestershire Meadow Pond," "A Stream from the Hills," and "The View from Burrow's Cross," all by Mr. B. W. Leader; and "The Enchantress," by Mr. J. Charles Dollman.

Of the picture sales by auction the most important was that of the collection, once the property of the Baroness Burdett-Coutts, which was sold by order of the executors of her husband, the late Mr. W. L. A. B. Burdett-Coutts. It contained pictures that had belonged to ancestors of the Baroness as well as those bought by herself, and some of them were of historic interest. They included Hoppner's famous portrait of Pitt—the original version—which fetched £7,350; and the portrait of Sir Walter Scott by Raeburn, from which more than one replica was made. The Raeburn was sold for £9,450, and among other portraits in the sale that fetched good prices were a half length by Sir Joshua Reynolds of his niece, Elizabeth Johnson, £5,450; of William the Fourth by Lawrence, £3,600; a study of an unnamed lady by Romney, £4,400; and a portrait of Nelson by Lemuel Abbott, £1,890. For a tiny Raphael "The Agony in the Garden" £6,350 was paid, and for two Hobbemas £7,510 each; and the sum total of the sale of the pictures only was £88,739. Another notable sale was of portraits by Vanddyke and Reynolds belonging to Lady Lucas. The Reynolds, portraits on one canvas of the Ladies Amabel and Mary Jemima Yorke, daughters of the second Earl of Hardwicke, realized £8,400; and four full lengths by Vanddyke, £6,520, £5,880, £5,250, and £3,990, respectively.

No Gainsboroughs of the first importance came under the hammer, but his portrait of Lady Glenorchy made £4,200; and that of a little girl, Julia Mott, £2,100. For a Romney the highest price paid was £8,190 for his portrait of the wife of Vanderghucht, the 18th century artist-dealer. From the collection of the late Mr. Ralph Brocklebank the National Gallery of Scotland bought for £3,390 a fine and unusual Turner "Somer Hill, near Tunbridge," and another Turner in the same sale "The Beacon Light," fetched £2,625. Other highly priced works were a portrait of a lady in black by Frans Hals, £6,510, an interior with an officer by a window by Ver Meer of Delft, £4,200, a head by Rembrandt from Baby Castle, £6,510, and a Corot "Une jeune fille en promenade" £3,150. A sketch by Watteau of a negro's head, in chalk on paper, fetched £3,200 in the Max Bonn sale at Sotheby's; and a water colour by Durer on vellum, of a dead duck, £2,100. Two volumes of John Downman's dainty portrait studies changed hands for £3,100; an engraving of Sir Joshua's portrait of Lady Catherine Pelham Clinton, by J. R. Smith, for £2,000; and a rare impression of Gainsborough Dupont's engraving of his uncle's portrait of Mrs. Sheridan, £609.

Art objects other than pictures and engravings also sold well, and £10,000 was paid at Sotheby's for a head in hard stone of King Ammenemes III. Six panels of tapestry belonging to the Countess

of Craven fetched £8,820; and the famous piece known as the Luttrell tapestry (or tablecloth?) £5,565. A pair of Louis Quinze commodes sent to Christie's by Lady Glenconner went for £3,465, and in the Lambton sale a Worcester vase and cover made £2,370. An important sale this year was that of the entire contents of the house at Cassiobury Park which had been the home of the Capells for more than three centuries, and included among its decorations some fine carvings by Grinling Gibbons.

Early in the year Gainsborough's "Blue Boy" was shown for two or three weeks at the National Gallery, before its departure to the American gallery of Mr. Huntington, and attracted thousands of visitors, who saw it for the first time without its former coat of yellowed varnish, which had been removed when the picture was cleaned. Another notable picture shown at the National Gallery for a time before it left England for good was the small Van Eyck from the Weld-Blundell collection, acquired by Mr. Frank Rinder for the National Gallery at Melbourne. The great Venetian room was opened, and an attempt was made during the summer to supplement the attractions of the Gallery by music, in the form of an afternoon concert. A fine portrait group of two brothers George and Francis Villiers (?) by Vanddyke was purchased from Lady Lucas in the spring, and several other interesting works were acquired for the national collection during the year. The children of the late Mr. Lewis Fry presented a portrait by Lucas van Leyden; Mr. Charles Clarke a "Virgin and Child with SS. Catherine and Barbara," by Quinten Massys; Mr. Lycett Green a picture by Amigoni; and Sir Henry Howorth (in memory of his wife) a group of paintings by Spanish, Italian and Dutch artists. Rosalind, Lady Carlisle bequeathed a portrait of Lady Cawdor as a child by Reynolds, a head by Bellini, a landscape by Rubens, and the well known picture by Gainsborough, the "Girl with Pigs." Two small portraits in oil were bequeathed by Mr. William Ashmead Bartlett Burdett-Coutts; and a curious early picture by an unknown artist of the French school (circa 1420) "The Holy Trinity," was purchased for the Gallery with the assistance of the National Art Collections Fund. Many portraits were acquired by the National Portrait Gallery. Those presented, and placed on view, included busts of Walter Savage Landor and the late H. M. Hyndman, and medallions of Josiah Wedgwood, the potter, and his partner, Thomas Bentley.

Special exhibitions in London were less numerous than usual this year, but in the summer the Burlington Fine Arts Club showed some remarkably interesting French pictures of the nineteenth century. One of the most interesting of the exhibitions at the Leicester Galleries was composed of paintings, pastels and etchings by Degas; the Greaves Exhibition at the Goupil Gallery recalled some old controversies; and Mr. Joseph Southall showed a collection of his work at the Alpine Club Gallery. A successful exhibition of pictures by women was organised at Olympia by the *Daily Express*. In March the Royal Society of Arts at length obtained the freehold of the house in John Street, Adelphi, it had tenanted for a hundred and thirty years, and in July steps were taken to establish studios for women sculptors in memory of Lady Feodora Gleichen.

OPERA.—The British National Opera Company gave a successful season at Covent Garden, for, if the singing was not always up to the standard set by the Royal Opera, the critics waxed eulogistic and the public lent its support. A number of popular works, including "Faust," "Carmen," "Aida," "Tannhäuser," "Samson and Delilah," "Madame Butterfly," and "Tosca," figured in a well-varied repertoire, "Parsifal," "The Meistersingers," and the ever fresh and delightful "Magic Flute," also being performed. An outstanding feature of the undertaking was the Marguerite of Mignon Nevada, who sang the difficult rôle in a manner which proved that she has inherited the abounding talent of her famous mother, Emma Nevada. Another fine interpretation, both vocally and dramatically, was Olga Haley's Carmen; at times the impersonation recalled both Calvé and Zélie de Lussan, who were pre-eminent in the part. Could the management succeed in engaging a few more artists of this type, the prospects of opera in English would be greatly improved. Perhaps they cannot be found.

Opera also has flourished at the "Old Vic," where Ethel Smyth's "The Boatswain's Mate" met with a rapturous and well-deserved reception. So, too, did Nicholas Gatty's "The Tempest," with its skilful orchestration and appropriate vocal line. Less successful was Cyril Rootham's "The Two Sisters," founded on the ballad of "The Two Sisters of Binnorie," and produced at Cambridge by the local Operatic Society. True, there is much colour in the score; the composer decidedly is a musician of ideas; and the voice parts are discreetly accompanied. Yet "The Two Sisters" lacks that sustained interest without which no work can gain immortality in operatic realms. The same may be said of Reginald Somerville's "David Garrick," which was revived in London. Its endless, almost cloying, stream of melody pleased those who ask for nothing better; but tunes are not everything.

Birmingham, not to be behind London, ventured on a limited Mozart season, "Così fan Tutti" and "Don Giovanni" having been performed, with Donizetti's engaging "Don Pasquale" by way of contrast. Wormser's "L'Enfant Prodigue," which created so great a sensation some years ago, also was given, and with pleasure to its hearers. Some of those who "assisted" at the representation of "Don Giovanni" perhaps felt that the management would have been wiser had it omitted from the list a work which demands better singers than were obtainable. "Don Giovanni" is so perfect an opera that to allot the rôles to imperfect performers serves no good purpose. To entrust its interpretation to any but artists of the highest calibre is an error of judgment, and one which retards the languishing cause of the British aspirant for lyric honours. A masterpiece amongst masterpieces should be treated as a sacred thing.

An interesting open-air performance of Gluck's "Orpheus" took place in the grounds of Warwick Castle under the auspices of the Warwick Choral Society. The natural scenery was ideal, the characters and the processions making their effective entrances from behind the trees and from the river. The choral singing was good, and the principals were received in a gratifying manner. Decidedly an event.

LONDON CONCERTS.—To concerts there has been no end, and it is to be feared that a good many of them cannot have produced either money or favourable criticisms. A percentage were, of course, merely given to introduce the singer or instrumentalist, and to impress the public and the critics. Unfortunately, many of those who gave song recitals (as in former years) fell so far short of the ideal that it was impossible for their hearers to commend them or for critics to contribute to their press-cutting albums. In promoting such affairs the concert agents did considerable harm to those newcomers who really were worth a hearing, since the few critics whose good opinion counts for something did not use the tickets which were so lavishly distributed. In the present state of the law, as applied to concert agents, these conditions no doubt will continue.

Amongst the *débütants* mention may be made of Alfred O'Shea, an Australian tenor, who, like many of his countrymen, possesses an extremely fine voice. There also is something quite captivating about his singing, while, though a young man, he already has acquired a good style and a singularly alluring *mezza voce*. O'Shea's career will, it is to be hoped, be a successful one; indeed, judging from present indications, it cannot be otherwise—provided he develops the intellectual side of the singer's art. And that, alas, is a thing which Australians are apt to neglect. So, too, do performers nearer home.

Augustus Miller, a baritone, was favourably received, chiefly on account of his forward emission and dramatic perception. Seldom has Schubert's "Erl-King" been better interpreted; it is obvious that the singer has devoted much intelligent thought to his conception. John Charles Thomas, another baritone, also made an excellent impression, for he possesses an unusually telling voice, the tone of which is round and even throughout its compass, and he economises his breath with rare skill. In the "Pagliacci" "Prologue" Thomas sang so delightfully that the hackneyed piece of music was invested with a fresh quality. So certain is the artist of the upper extremity of his voice that he was able to interpolate an A flat, and with splendid effect. The only fault to be found with this really admirable singer is that he included in the programme the songs of his "dear native land," America. They were more than unworthy of the performer.

Megan Foster, who promises well, Elsa Murray-Aynsley, the possessor of an excellent voice, and Barbara Maurel, an American, captured the affections of the public, for each has in view the principles of *bel canto*. And, since each sings intelligently, practice will no doubt make perfect. The Vatican Choir also paid London a visit, departing without leaving Londoners particularly impressed. To have heard Palestrina and Vittoria again was most agreeable; but the manner in which their music was rendered resulted in a chastened joy; for the tone, as a whole, was not good, the trebles and altos being shrill in the *forte* passages, and the *nuances* were exaggerated. The Vatican Choir should take a lesson from the Choir of the Russian Church in Paris. Theirs is all that singing ought to be.

The usual number of instrumentalists tempted fate, and with success, for nearly all were extremely well-equipped. Several had studied

entirely in England, where, curiously enough, teachers of the piano and stringed instruments have no superior. (It is unfortunate that would-be singing-masters are not equally adroit.) The only new-comer who failed to justify the puffery of his Press agent was a lad for whom it was prophesied that he would outvie the efforts of all prodigies, including the infant Mozart and the precocious little Haydn. The violin is his instrument, and he performs upon it with uncommon skill, to be sure, overcoming technical difficulties with the ease of a Kreisler. But the boy has been allowed to do things which certainly should not have been permitted, and which sadly detract from the value of his playing. The sooner he is old enough to think for himself the better.

Amongst the regular concert-givers, whose appearance year in year out always is welcome, were Elena Gerhardt, who endeavoured to make the dreary Hugo Wolf interesting. Mischa Elman, whose wonderful playing is more—well, eloquent than ever, and Harriet Cohen, who introduced three little piano pieces by Goossens, trifles which, unless the present scribe is a very poor judge, are not of much account. Chaliapin, with the strange assistance of the *Daily Mail*, drew a vast audience to the Albert Hall, his singing of Moussorgsky's "Song of the Flea" being an uncommonly clever thing. He is understood to have been amused at the critics writing of his "wonderful voice," for it is the artist's magnetism and skilled use of a rather ordinary voice that makes him almost unique amongst singers. Chaliapin knows his own limitations and capabilities—none better.

The various Societies have been active, amongst them the Royal Choral, which performed Holst's "The Hymn of Jesus." The "Hymn" is difficult and not of engrossing interest, while the orchestral part of the score was dwarfed by the chorus. The Society also gave Bridge's "The Forging of the Anchor," which is of no particular importance. The Philharmonic introduced Delius' "Requiem," a work of high aim and lower accomplishment, which, however, is not without a saving grace, for its performance lasts but half an hour. Verdi's rather operatic "Requiem," by way of contrast, was given by the Crystal Palace Choral and Orchestral Society, the choral singing being excellent, and the South London Philharmonic Society gave a satisfactory performance of Dvorak's "The Spectre's Bride." The Wandsworth Male Voice Choir a new venture, also put in good work.

The Garde Républicaine band and bandmen proved themselves to be very welcome visitors; for clarity of tone and crispness such as theirs seldom is heard. The astounding skill with which rapid string passages were reproduced by the wood-wind players was an unforgettable triumph. The band, in short, covered itself with glory.

To those who find their soul's delight in perfect singing, the two Battistini recitals decidedly were the event of the summer. After all these long years, the great baritone's voice has the freshness of eternal youth, being as round and as carrying as ever, while he sings with that absence of effort and beauty of tone which come from proper breath-control. The splendid dignity and authority of Battistini's unrivalled art, the smoothness of his scales, the neatness

of the grace notes and ornaments which he interpolates, and the ease with which he overcomes the difficulties of the most intricate *cadenza*, are sheer joy to the connoisseur and a priceless object-lesson to the student. Nor is this all, for everything that he does is in good taste; exaggeration and too great a display of emotion have no part in his scheme of things—never is the tone sacrificed to the occasion. This was particularly noticeable in music calling for dramatic emphasis, such as the "Pagliacci" "Prologue," the emotional passages of which are a pitfall to singers who have not acquired complete mastery over the voice. On Battistini's lips the "Prologue" became a thing apart; the *cantabile*, "E voi pietoso," with its finely worked-up climax, was a truly splendid piece of work. Nor was "La gloria d'Italia," as he is known in his native land, less effective in "Quand' ero Paggio." That is where his unequalled *mezza voce* came in.

Happily, Battistini returns to London this year. Should it be possible to arrange for his appearance with the National Opera Company, so much the better for the cause of opera in England. "Tosca," for example, is in the Company's *répertoire*, and Battistini is a Scarpia amongst Scarpas. He would, of course, sing the part in Italian, but what matter?

IN THE PROVINCES.—Throughout the provinces all who are connected with music have been most active, and often with praiseworthy results. The Glasgow Orpheus Chorists again distinguished themselves, as did innumerable Welsh choirs and societies, particularly at the Harlech Festival. Upon this occasion Bach's "Dona nobis pacem" was sung in the vernacular, under the title "Dyrol Heddych," the nineteen choirs also contributing Schubert's "Song of Miriam," in Welch. Harrogate showed itself to be devoted to Brahms and Tchaikovsky; Manchester heard much that was worth hearing; and the Oxford undergraduates sang, to orchestral accompaniment, in aid of the Magdalen College Mission. The Newcastle Festival Choir, breaking away from almost invincible custom, gave an open-air concert. Bath was introduced to Brahms's "Requiem;" Birmingham afforded hospitality to several artists of note; and Bach's "Passion Music" was performed in the cathedral. "The Golden Legend," which is popular in Scotland, brought contentment to Kirkcaldy. Alick Maclean's cantata, "The Annunciation," made a gratifying impression at Bolton; César Franck's "Symphonic Variations" thrilled a Bradford audience; and "The Song of Hiawatha" greatly pleased Dundee the critical. Edinburgh was fortunate enough to secure the services of the R.A. String Band; and Glasgow, having a reputation for wit, took pleasure in Scarlatti's "The Good-Humoured Ladies," a diverting composition. The Scottish Orchestra, ever enterprising, tried Landon Ronald's "Garden of Allah," a work of extremely unequal value. Luckily Humperdinck's "Hänsel und Gretel" overture also figured in the programme, the charm of the orchestration making its customary deep impression. And uncommonly well it was played, too.

Several new singers have made successful appearances in the provinces, among them being Marie Lillie, a dramatic soprano with a fine voice and an engaging stage presence. Her career will be followed with interest.

SEVERAL long runs were recorded during the year, but the London stage saw no new plays of first-rate importance. One of the most successful productions was *Decameron Nights*, a romantic play with music and spectacles adapted by Boyle Lawrence from Robert McLoughlin, which filled Drury Lane Theatre for eight months and was still being performed at the end of the year. Another spectacular play was *East of Suez*, by W. Somerset Maugham, which formed the new fare at His Majesty's.

Sir Arthur Pinero was better represented on the stage than for some years. *The Enchanted Cottage*, a "fable" produced at the Duke of York's, was not so successful as his earlier plays, but a revival of *The Second Mrs. Tanqueray* at the Playhouse, with Miss Gladys Cooper in Mrs. Patrick Campbell's old part, proved that the problem play which caused a sensation so many years ago retained its old appeal. A Pinero cycle was later inaugurated at the Royalty with a revival of *Mid-Channel*. Several of John Galsworthy's plays were also revived at the Court, together with a new comedy from this dramatist, *Windows*, while Arnold Bennett, R. C. Carton, James Bernard Fagan and A. A. Milne, added to their productions.

Shakespeare was confined to the "Old Vic," apart from a season at the Savoy early in the year by Henry Baynton.

The following is a list of the principal London productions of the year:—

ABELPHI.—June 20, 1922. *The Way of an Eagle*, by Ethel M. Dell (Messrs. Godfrey Tearle, Darby Foster and Drelincourt Odlum and Mesdames Marjorie Gordon and Jessie Winter). Oct. 10. *The Island King*, by Peter Gawthorne with music by Harold Garstin (Messrs. W. H. Berry, Peter Gawthorne, C. M. Lowne, George Bishop and Alfred Clark and Mesdames Nancie Lovat and Louie Pounds).

ALDWYCH.—Jan 31, 1922. *Money Doesn't Matter*, a comedy by Gertrude E. Jennings (Messrs. Donald Calthrop, Eric Lewis and Evan Thomas and Mesdames Henrietta Watson, Kate Cutler and Doris Lytton). April 10. *The White-Headed Boy*, Lennox Robinson's comedy revived (Messrs. George Dillon, Parker K. Lynch and Fred O'Donovan and Mesdames Kitty McVeigh, Sara Allgood and Mignon O'Doherty). May 17. *A Prodigal Daughter*, by H. A. Gurney (Messrs. Donald A. Calthrop, Garry Marsh, Lauderdale Maitland and Eugene Leahy and Mesdames Mary Merrill and Helena Millais). June 7. *The Stop-Gap*, a comedy by Florence N. H. Atack, produced by the Playwrights' Theatre (Messrs. Charles Maunsell and Jack Melford and Mesdames Helena Millais and Muriel Pratt). Sept. 4. *Double or Quit!* a farce by Theophilus Charlton (Messrs. Donald Calthrop, Robert Horton, C. W. Somerset and Eric Lewis and Miss Ruth Maitland).

ALHAMBRA.—Nov. 2, 1921. *The Sleeping Princess*, ballet with music by Tchaikovsky, setting and costume by Leon Bakst (Mesdames Lydia Lopokova and Olga Spessiva).

AMBASSADORS.—Nov. 3, 1921. *Deburau*, English version of Sacha Guitry's play by Harley Granville-Barker (Messrs. Robert Loraine, Bobbie Andrews, Ivor Novello and Michael Sherbrooke and Mesdames Madge Titheradge and Colette O'Neil). Dec. 7. *Clothes and the Woman*, a comedy by George Paston (Messrs. C. V. France, Clive Brook and Reginald Bach and Mesdames Iris Hoey, Ursula Millard and Frances Wether-

all). Feb. 2, 1922. *My Son*, a comedy by Herbert Thomas (Messrs. Townsend Whiting, Arthur Pusey and Harry Bristow and Miss Frances Ivor). Feb. 13. *Mixed Marriage*, St. John Ervine's play revived (Messrs. Desmond O'Donovan, Fred O'Donovan, John C. Bland and Parker Lynch and Mesdames Sara Allgood and Muriel Allen). March 22. *The Curate's Egg*, a revue by Arthur Wimperis, with music by Herman Finck (Messrs. Nelson Keys, Henry Kendall, Charles Groves, and Charles Trevor and Mesdames Irene Russell and Flora Ashe). Aug. 3. *Husbands are a Problem*, by Harris Deans (Messrs. C. V. France and Stafford Hilliard and Mesdames Kate Cutler, Ethel Coleridge and Agatha Kentish). Sept. 21. *Charles I.* the play by W. G. Wills revived (Messrs. Russell Thorndike and St. Barbe West and Mesdames Miriam Lewes and Amy Brandon-Thomas).

APOLLO.—Nov. 10, 1921. *Thank You, Phillips*, a farce by A. L. Burke (Messrs. H. Nettlefold, John Deverell and Stanley Turnbull and Mesdames Marie Illington and Doris Lytton). Nov. 29. *Galley Slaves*, an Icelandic play by Hjalmar Erlingsson, translated by "Michael Orme," produced by the Playwrights' Theatre (Messrs. Julius Knight, Lauderdale Maitland, and Norman Harle and Mesdames Mary Merrill and Margaret Deane). Dec. 22. *Where the Rainbow Ends* revived (Messrs. Darley Foster and Philip Taylor and Miss Monica Morgan).

Feb. 1, 1922. *The Wheel*, a play by James Bernard Fagan (Messrs. Philip Merivale, Robert Horton, Randle Ayrton, and Frank Denton and Mesdames Phyllis Neilson-Terry and Edith Evans). May 30. *Triby* revived (Messrs. Lyn Harding, Lauderdale Maitland and Randle Ayrton, and Miss Phyllis Neilson-Terry). Aug. 5. *Listening-In*, musical burlesque (Mesdames M'Lisa Dolores and Clarice Clare, and Messrs. Will Hay and Herman Darewski). Sept. 12. *The Torch*, a drama by John Knittel (Messrs. Maurice Moscovitch, Leslie Banks, Garry Marsh, Nai Madison and Cyril Raymond and Mesdames Olga Lindo and Margaret Halstan). Oct. 24. *Glamour*, a comedy by Peter Garland (Messrs. C. Aubrey Smith, Holman Clark and Frank Freeman, and Mesdames Frances Carson, Marjorie Holman, and Maud Cressall).

COMEDY.—Nov. 16, 1921. *The Faithful Heart*, a play by Monckton Hoffs (Messrs. Godfrey Tearle, Lawrence Hanray and Rothbury Evans, and Mesdames Mary Odette and Mollie Kerr). Feb. 12, 1922. *The Yellow Poppy*, by D. K. Broster and W. Edward Stirling, produced by the Repertory Players (Messrs. William Stack, Henry Kendall and Richard Bird and Mesdames Doris Lloyd and Louise Hampton). Feb. 15. *Enter Madame*, a comedy by Gilda Varesi and Dolly Byrne (Messrs. Dennis Eadie and John Williams, and Mesdames Gilda Varesi and Gladys Mason). March 12. *If Four Walls Told*, by Edward Percy, produced by the Repertory Players (Messrs. Reginald Bach, William Stack and Tristan Rawson, and Mesdames Muriel Alexander and Louise Hampton). March 29. *Other People's Worries*, a light comedy by R. C. Carton (Messrs. C. M. Lowne, Edmund Willard, Compton Counts and Forrester Harvey and Mesdames Compton and Athene Seyler). April 23. *Zack*, a comedy by Harold Brighouse, produced by the Repertory Players (Messrs. Henry Kendall and Edward Stirling and Mesdames Louise Hampton and Jean Webster Brough). June 6. *Quarantine*, a comedy by

F. Tennyson Jesse (Messrs. Owen Nares, Tom Reynolds and Compton Courtts and Mesdames Edna Best, Muriel Pope and Louise Hampton). *Sept. 7. Secrets*, a comedy by Rudolf Besier and May Edgington (Messrs. Leon Quartermaine, Norman Page and Hubert Harden and Mesdames Fay Compton and Helen Haye).

COURT.—*Dec. 12, 1921. She Stoops to Conquer*, revived (Messrs. Alfred Clark, H. O. Nicholson, Miles Malleon and James Dale and Mesdames Eileen Beldon and Ena Grossmith). *Dec. 26. The Great Big World*, a phantasy by Katherine Barnsley (Messrs. Miles Malleon, Denis Carey and George Hayes and Mesdames Mary Grey and Patricia Hayes). *Feb. 7, 1922. Justice*, John Galsworthy's drama revived (Messrs. E. Lyall Swete, Acton Bond, Lawrence Hanray, Leon M. Lion and Miss Edyth Goodall). *Feb. 27. The Pigeon*, John Galsworthy's play revived (Messrs. Leon M. Lion, Ernest Thesiger, and Ernest Hendrie and Mesdames Ursula Millard and Muriel Pratt). *March 20. The Silver Box*, John Galsworthy's play revived (Messrs. Arthur Whitley, Hugh Wakefield and John Howell and Mesdames Auriol Lee, Margaret Carter and Louise Hampton). *April 25. Windows*, a comedy by John Galsworthy (Messrs. Herbert Marshall, John Howell and Ernest Thesiger and Mesdames Irene Rooke, Mary Odette and Clare Greet). *June 1. The Rabbi and the Priest*, by Benedict James, revived (Messrs. J. Fisher White, M. D. Waxman and Nat Blake and Mesdames Mary Grey, Marie Munro and Sylvia Morris). *Sept. 29. Mr. Garrick*, a play by Louis N. Parker (Messrs. Gerald Lawrence, Roy Byford and H. de Lange and Miss Madge Compton).

CRITERION.—*Aug. 23, 1922. The Dippers*, a comedy by Ben Travers (Messrs. Cyril Maude, Henry Wenman and Ernest Trimmingham and Mesdames Binnie Hale and Violet Graham).

DALY'S.—*Dec. 26, 1921. The Maid of the Mountains*, revived (Messrs. Peter Gawthorne, Bertram Wallis and Edward D'Arcy, and Mesdames José Collins and Mabel Sealy). *Feb. 21, 1922. The Lady of the Rose*, a musical comedy adapted by Frederick Lonsdale from the book by Rudolph Schanzer and Ernest Welisch, with music by Jean Gilbert and lyrics by Harry Graham (Messrs. Harry Welchman, Huntley Wright, Roy Royston and Leonard Mackay and Mesdames Phyllis Dare, Ivy Tresnand and Winnie Collins).

DRURY LANE.—*April 20, 1922. Decameron Nights*, a romantic play by Robert McLoughlin, adapted by Boyle Lawrence, with music by Herman Finck (Messrs. H. A. Saintsbury, Cowley Wright, Ivan Berlyn, Hugh Buckler and David Miller and Mesdames Gladys Ancrum, Ellis Jeffreys, and Willette Kershaw).

DUKE OF YORK'S.—*Nov. 12, 1921. The Pilgrim of Eternity*, a Byron play by K. K. Ardachir (Messrs. Cowley Wright, Eugene Leahy, H. R. Hignett and Halliwell Hobbes and Mesdames Yvonne Arnaud and G. G. Hervey). *Dec. 9. Charley's Aunt* revived (Messrs. William Kershaw and James Page and Mesdames Clare Lindsay and Leila Langley). *Jan. 23, 1922. The Night Cap*, a burlesque melodrama by Guy Bolton and Max Marcin (Messrs. Robert Loraine, James Carew, Harry Frankiss, Spencer Trevor and Clarence Blackiston, and Mesdames Margaret Halstan and Anita Elson). *March 1. The Enchanted Cottage*, a "fable" by Sir Arthur Pinero (Messrs. Owen Nares, Norman Forbes,

Nicholas Hannen and O. B. Clarence and Mesdames Laura Cowie, May Whitty, Jean Cadell and Winifred Emery). *May 9. Nuts in May*, a farce adapted by E. Lawrence Prentice from the French of H. Raymond, Victor Roger and Anthony Mars (Messrs. Dan Rolyat, John Deverell and Louis Goodrich, and Mesdames Isabel Jeans and Edie Graham). *June 8. Pomp and Circumstance*, a comedy by Monckton Hoffs (Messrs. Robert Loraine, Hubert Harben and Thomas Weguelin, and Mesdames Ursula Millard and Irene Browne). *Aug. 15. The Broken Wing*, a comedy by Paul Dickey and Charles W. Goddard (Messrs. Thurston Hall and Francis Lister and Mesdames Dorothy Dix and Dorothy Hanson).

EMPIRE.—*Feb. 10, 1922. Jenny*, musical comedy by Harry Grattan, with music by Haidee de Rance (Messrs. Shaun Glenville, Billy Leonard and Reginald Sharland and Mesdames Elzith Day, Maidie Hope, Maidie Andrews and Edna Bellonini). *April 19. Love's Awakening*, a light opera with lyrics by Adrian Ross and music by Eduard Kunneke (Messrs. Edouard Lestan, Billy Leonard and Harry Brindle and Mesdames Marjorie Gordon, Juliette Autran and Betty Chester). *Sept. 6. The Smith Family*, a musical comedy by several authors, with music by Nat D. Ayer (Messrs. Harry Tate, Billy Caryll and Charles Brooks and Mesdames Connie Ediss, Phyllis Bedells, Cora Goffin and Ella Retford).

GAIETY.—*Dec. 10, 1921. The Little Girl in Red*, by Harold Simpson and Arthur Stanley, with music by Edouard L'Enfant (Messrs. Mark Lester, Billy Leonard and Arthur Margetson, and Mesdames Margaret Bannerman, Amy Augarde and Mai Bacon). *April 1, 1922. His Girl*, by Austen Hurgon and F. W. Thomas, lyrics by Claude E. Burton and music by Ernest Longstaffe and Max Darewski (Messrs. Stanley Lupino, Arthur Margetson, Bobbie Blythe, and Walter Gay and Mesdames Hilda Bayley, Margaret Bays, Patricia Malone, and Vesta Sylva). *Oct. 7. The Last Waltz*, a musical comedy by Reginald Arkell and Robert Evett, with music by Oscar Straus (Messrs. Kingsley Lark, Bertram Wallis, Billy Leonard and Pop Cory and Mesdames José Collins and Amy Augarde).

GARRICK.—*Nov. 16, 1921. The Painted Lady*, play by Leonid Andreieff (Messrs. Basil Rathbone, Oswald Marshall and Frederick Permain, and Mesdames Khyva St. Albans and Margaret Halstan). *Dec. 26. Alice in Wonderland* revived (Messrs. C. Hayden Coffin, Harry Hearne and Franklyn Vernon and Miss Phyllis Griffiths). *Jan. 30, 1922. The Bird of Paradise*, by Richard Walton Tully, revived (Messrs. Cronin Wilson, Henry Wolston, Jerrold Robertshaw, and Harold French and Mesdames Willette Kershaw and Maud Cressall). *Mar. 22. The Man in Dress Clothes*, from the French of A. Picard and Y. Mirande, by Seymour Hicks (Messrs. Seymour Hicks, Stanley Logan, Lawrence Caird and J. C. Buckstone and Mesdames Joan Vivian-Rees and Barbara Hoffs). *Oct. 17. Dédé*, a musical comedy, by Albert Willemetz, adapted by Ronald Jeans, with music by Henri Christine (Messrs. Joseph Coyne, Guy le Feuvre and Mesdames Gertrude Lawrence, Joyce Gaymon, and Velma Deane).

GLOBE.—*Dec. 20, 1921. The Truth About Blayds*, a comedy by A. A. Milne (Messrs. Norman McKinnel, Dion Boucicault and Ion

Swinley and Mesdames Irene Vanbrugh, Irene Rooke and Faith Celli). *April 6, 1922.* *Mr. Pim Passes By*, A. A. Milne's comedy revived (Messrs. Dion Boucicault, Aubrey Smith and Jack Hobbs and Mesdames Irene Vanbrugh, Helen Spencer, and Ethel Griffiths). *May 27.* *Eileen*, a comedy adapted by H. M. Harwood from the French of Paul Armont and Jacques Bousquet (Messrs. Dion Boucicault, Paddy Duprés and Jack Hobbs and Mesdames Irene Vanbrugh, Rosina Filippi and Heather Thatcher). *July 3.* *Belinda*, A. A. Milne's comedy revived (Messrs. Dion Boucicault, Herbert Marshall and Jack Hobbs and Mesdames Irene Vanbrugh and Helen Spencer). *Sept. 5.* *The Return*, a comedy by Arthur Winperis from the French of Robert de Flers and Francis de Croisset (Messrs. George Tully, Jack Hobbs and Alfred Bishop and Mesdames Marie Lohr and Lottie Venné).

HAYMARKET.—*June 7, 1922.* *The Dover Road*, a comedy by A. A. Milne (Messrs. Allan Aynesworth, Henry Ainley, Nicholas Hannen and John Deverell and Mesdames Athene Seyler and Nancy Atkin).

HIPPODROME.—*Dec. 22, 1921.* *Jack and the Beanstalk*, a pantomime (Messrs. George Robey, Jay Laurier and Tom Wall and Mesdames Clarice Mayne, Winifred Rome, and Madge Saunders). *March 16, 1922.* *Round in Fifty*, a revue by Sax Rohmer, Julian Wylie and Lauri Wylie, with music by James W. Tate and Herman Finck (Messrs. George Robey, Barry Lupino, and Alec Kellaway, and Mesdames Renée Reel and Jean Allistone).

HIS MAJESTY'S.—*Sept. 2, 1922.* *East of Suez*, a play by W. Somerset Maugham (Messrs. Basil Rathbone, Henry Kendall, Malcolm Keen and C. V. France and Mesdames Meggie Albanesi, Marie Ault and Ursula Millard).

KINGSWAY.—*Dec. 18, 1921.* *The Furnace*, adapted by William Armstrong from the novel of Brett Young, produced by the Play Actors (Messrs. William Armstrong, Sydney Paxton, Frank Petley and Henry Hallett and Mesdames Amy Brandon-Thomas and Dulcinea Glasby). *Dec. 19.* *When Knights were Bold*, revived (Mr. Bromley Challenor and Miss Enid Cooper). *Feb. 5, 1922.* *Lady Larcombe's Lapse*, comedy by Jessie Porter produced by the Play Actors (Messrs. Ben Webster, Henry Kendall, Aubrey Mather and Hubert Harben and Mesdames Irene Rooke and Molly Harben). *March 7.* *The Yellow Jacket*, by George C. Hazleton and Benrimo revived (Messrs. Holman Clark, Ivor Novello, John Tresahar and Jevan Brandon-Thomas and Miss Doris Lloyd). *March 24.* *Ships and Arrows*, by Betty Bower, produced by the Playwrights' Theatre (Messrs. Eric Cowley, Leslie Banks, and William Armstrong, and Mesdames Marie Royter and Margaret Scudamore). *March 26.* *The Afrikaner*, by Henderson Bland, produced by the Play Actors (Messrs. Robert Minster, Wilfred Fletcher and Clarke Smith, and Mesdames Madge McIntosh and Viva Birckett). *April 2.* *The Girl and the City* and *Thirty Minutes in a Street*, by Beatrice Mayor, produced by the Playwrights' Theatre. *April 10.* *The Return of Sybil*, a comedy by W. Lemon Hall, produced by the Play Actors (Messrs. Wilfred Forster, Leonard Upton and Naylor Grimston and Mesdames Barbara Everest and Ann Desmond). *May 18.* *Life's a Game*, a comedy by Michael Orme (Messrs. Ben Webster, Stanley Turnbull and Garry Marsh, and Mesdames Mary Merrall and Margaret Halstau and Dame

May Whitty). *June 5.* *Hedda Gabler*, Ibsen's drama revived (Mrs. Patrick Campbell). *June 21.* *Spanish Lovers*, a play by J. Feliu y Codina (Messrs. John Tresahar, Seton Blackden and Ivor Novello and Mesdames Doris Lloyd and Julie Kean). *Aug. 7.* *The Limpet*, a farcical comedy by Vernon Woodhouse and Victor MacClure (Messrs. Hubert Harben, Stanley Turnbull and Robert Minster and Mesdames Sybil Arundale and Phyllis Shannaw). *Sept. 14.* *I Serve*, a comedy by Roland Pertwee (Messrs. Sam Livesey and Roland Pertwee and Mesdames Edith Evans and Dorothy Thomas). *Sept. 24.* *The Philatelist*, a comedy by E. Lyall Swete, produced by the Interlude Players (Messrs. E. Lyall Swete, Bryan Powley, and Perceval Clark, and Mesdames Jean Cadell and Lily Brough).

LITTLE.—*Jan. 25, 1922.* *Amends*, by Crawshaw-Williams (Mr. George Bealby and Miss Sybil Thorndike); *Changing Guard*, by W. G. Nott-Bower (Mesdames Thorndike and Cicely Oates); *De Mortuis*, by Stanley Logan (Messrs. Ben Webster and Wilfrid Seagram, and Mesdames Susan Richmond, Frances Wetherall, and Dora Gregory). *Nov. 22. Two Jacks and a Jill*, a farcical comedy by H. V. Esmond (Messrs. H. V. Esmond, Henry Kendall, Fred Lewis, and Aubrey Fitzgerald, and Mesdames Jessie Winter, Nellie Hodson, and Lena Halliday). *Jan. 16, 1922. The Eleventh Commandment*, a play by Brandon Fleming (Messrs. Dawson Milward, Frank Esmond, Edmond Breon, and H. G. Stoker, and Mesdames Grace Lane, Dorothea Pidcock, and Viola Tree). *April 13. If Four Walls Told*, a "village play" by Edward Percy (Messrs. Reginald Bach, Tristan Rawson, Ambrose Manning, and Roger Livesey, and Mesdames Edyth Goodall, Louise Hampton, and Moyna Macgill). *June 2. The Green Cord*, a play by Marian Bower and Anthony Ellis (Messrs. Aubrey Smith, Felix Aylmer, and Arthur Wellesley, and Mesdames Lettice Fairfax, Grace Lane, and Mary Merrall). *Oct. 3. Mr. Budd of Kennington, S.E.*, a comedy by H. F. Maltby (Messrs. Tubby Edlin and William Lugg, and Miss Helen Coram). *Oct. 30. Mid-Channel*, Sir Arthur Pinero's comedy revived (Messrs. Scott Sunderland, Leon M. Lion, and Martin Lewis, and Mesdames Irene Vanbrugh and Helen Morris).

ST. JAMES'S.—*Dec. 15, 1921. Peter Pan*, Sir James Barrie's phantasy revived (Messrs. Ernest Thesiger, George Shelton, and Gordon Carr, and Mesdames Joan Maclean, Sylvia Oakley, and Gabrielle Casartelli). *Jan. 23, 1922. The Bat*, a play by Mary Roberts Rinehart and Avery Hopwood (Messrs. Arthur Wontner, Claude Rains, and George Relph, and Mesdames Eva Moore and Drusilla Wells).

ST. MARTIN'S.—*Mar. 8, 1922. Loyalties*, a comedy by John Galsworthy (Messrs. Eric Maturin, Ernest Milton, Dawson Milward, and J. H. Roberts, and Mesdames Meggie Albanesi and Cathleen Nesbitt), and *Shall we Join the Ladies?* one-act by Sir James Barrie (Messrs. Leslie Faber, J. H. Roberts, Dawson Milward, Edmond Breon, and Ben Field, Lady Tree and Mesdames Meggie Albanesi, Muriel Pratt, and Elisabeth Pollock).

SAVOY.—*Jan. 3, 1922. The Merchant of Venice* (Messrs. Henry Baynton and Kenneth Wicksteed, and Mesdames Gertrude Gilbert, Eosaline Courtneidge and Alice de Grey). *Jan. 10. Hamlet* (Mr. Henry Baynton). *Jan. 17. King Lear* (Messrs. Henry Baynton, Frederick Victor, and Murray Kinnell, and Mesdames Alice de Grey and Henrietta Goodwin). *Jan. 24. Julius Caesar* (Mr. Henry Baynton). *Jan. 25. Othello* (Messrs. Henry Baynton and Dunstan). *Jan. 26. Romeo and Juliet* (Mr. Baynton and Miss de Grey).

Feb. 23. Sarah of Soho, a comedy by Douglas Murray (Messrs. C. V. France and William Mollison, and Mesdames Gertrude Elliott and Lottie Venne). *April 26. The Card Players*, a posthumous comedy by C. Haddon Chambers (Messrs. Godfrey Tearle, C. V. France, and E. Lyall Swete, and Mesdames Pepita Bobadilla and Viola March). *Aug. 26. Lawful Larceny*, a comedy by Samuel Shipman (Messrs. Morgan Wallace and Forest Winant, and Mesdames Ruth Shepley and Catherine Calvert).

SHAFTESBURY—*Nov. 17, 1921. Will Shakespeare*, an "invention in four acts," by Clemence Dane (Messrs. Philip Merivale, Claude Rains, and Arthur Whitby, and Mesdames Moyna MacGill, Mary Rorke, Mary Clare, and Haidee Wright). *Jan. 10, 1922. The Rattlesnake*, a romantic play by J. E. Harold Terry and Rafael Sabatini (Messrs. Fisher White, Franklin Dyall, Milton Kosmer, Edward O'Neill, and Aubrey Mather, and Mesdames Cathleen Nesbitt and Eleanor Street). *March 11. In Nelson's Days*, a play by Mrs. Clifford Mills (Messrs. Alfred Bishop, Percy Hutchison, Ben Webster, and F. G. Thurstan, and Mesdames Marie Hemingway and Elsie Stranack). *March 18. Nightie Night*, by Martha M. Stanley and Adelaide Matthews, revived (Messrs. Percy Hutchison, King Fordham, and Cranstoun Neville, and Mesdames Dorothy Minto and Elsie Stranack). *April 13. Tons of Money*, a farce by Will Evans and Valentine (Messrs. Ralph Lynn, Tom Walls, George Barrett, and Willie Warde, and Mesdames Yvonne Arnaud, Mary Brough, and Madge Saunders). *Oct. 31. The Cat and the Canary*, a play by John Willard (Messrs. Frank Denton, Evan Thomas, and S. J. Warrington, and Mesdames Mary Glynn, Auriol Lee and Esmé Beringer).

STRAND—*Dec. 22, 1921. The Thing that Matters*, a play by F. Britten Austin (Messrs. Arthur Bouchier, Holman Clark, George Ralph, Tom Reynolds, and Owen Roughwood, and Mesdames Kyrie Bellew, Rosaline Courtneidge and Violet Graham and Lady Tree). *Jan. 19, 1922. Old Jig*, a play by Sydney Blow and Douglas Hoare (Messrs. Allan Aynesworth, Felix Aylmer, Francis Lister, and D. A. Clarke-Smith, and Miss Jessie Winter) and *Me and My Diary*, one-act play by Gertrude E. Jennings (Mesdames Ellis Jeffreys and Lettice Fairfax). *March 21. The Love Match*, a comedy by Arnold Bennett (Messrs. Arthur Bouchier, E. Holman Clark, and Campbell Gullan, and Mesdames Kyrie Bellew, Margaret Watson and Nadine March). *May 6. Tilly of Bloomsbury*, "Ian Hay's" comedy revived (Messrs. Arthur Bouchier, Holman Clark and Basil Foster, and Mesdames Kyrie Bellew, Connie Ediss and Ena Grossmith). *July 5. The Risk*, adapted from "Le Caducée" by Andre Pascal (Messrs. Arthur Bouchier, Reginald Bach, Frank Petley, and Halliwell Hobbes, and Mesdames Kyrie Bellew and Beatrice Wilson). *Oct. 11. Angel Face*, a musical farce by Harry B. Smith,

with lyrics by Robert B. Smith and music by Victor Herbert (Messrs. Tyler Brooke, George Gregory, Eric Blore, and Miles Malleeson and Mesdames Winifred Barnes and Mabel Sealby). *Oct. 26. The Balance*, a drama by Frank Dix and Leon M. Lion (Messrs. George Bealby, George Elton, and Edward Rigby, and Mesdames Ethel Craske and Mary Clare).

VAUDEVILLE—*Dec. 24, 1921. Pot Luck*, a revue by Ronald Jeans and Dion Titheradge (Messrs. Jack Hulbert, Herbert Mundin, and Dennis Cowles, and Mesdames Beatrice Lillie, Mary Leigh and Doris Ashton). *Aug. 11, 1922. Snap*, a revue by Ronald Jeans and Dion Titheradge, with music by Kenneth Duffield (Messrs. A. W. Baskcomb, Roy Royston, and Herbert Mundin, and Mesdames Clarice Mayne, Cicely Debenham, and Mary Leigh).

WINTER GARDEN—*Sept. 19, 1922. The Cabaret Girl*, a musical comedy by George Grossmith and P. G. Wodehouse, with music by Jerome Kern (Messrs. George Grossmith, Norman Griffin, and Geoffrey Gwyther, and Mesdames Heather Thatcher, Dorothy Dickson, and Molly Ramsden).

WYNDHAM'S—*April, 5, 1922. Running Water*, a comedy by A. E. W. Mason (Messrs. Gilbert Hare, Spencer Trevor, Max Leeds, and Edward Combermere, and Mesdames Edna Best and Billie Hill). *May 6. Dear Brutus*, Sir James Barrie's comedy revived (Messrs. Norman Forbes, Ronald Squire, Alfred Drayton, and Arthur Hatherton, and Sir Gerald du Maurier, and Mesdames Joyce Carey, Faith Celli and Mabel Terry-Lewis).

THE PHOENIX SOCIETY produced *The Maid's Tragedy* by Beaumont and Fletcher, at the Lyric, Hammersmith, on *Nov. 15, 1921* (Messrs. Ion Swinley, Harvey Braban, George Skillan, and Stanley Lathbury, and Mesdames Sybil Thorndike and Isabel Jeans); *The Chances*, a revision of Buckingham of an adaptation by Fletcher of a novel by Cervantes at the Shaftesbury on *Jan. 30, 1922* (Messrs. Edmund Willard, Felix Aylmer, and George Skillan, and Mesdames Clare Greet, Isabel Jeans, and Muriel Pratt); *All for Love*, by John Dryden, at the Shaftesbury on *March 20* (Messrs. Ion Swinley, Campbell Fletcher, Hugh Miller, and William Armstrong, and Mesdames Edith Evans and Ellen O'Malley).

THE STAGE SOCIETY produced *Uncle Vanya*, by Anton Chekov, translated by Constance Garnett, at the Court on *Nov. 28, 1921* (Messrs. Franklin Dyall, Leon Quartermaine, and H. R. Hignett, and Mesdames Cathleen Nesbitt, Irene Rathbone, Agnes Thomas, and Iné Cameron); *Six Characters in Search of an Author*, by Luigi Pirandello, at the Kingsway on *Feb. 27, 1922* (Messrs. Franklin Dyall and Alfred Clark, and Mesdames Muriel Pratt and Margaret Yarde); *At the Gates of the Kingdom*, by Knut Hamsun, at the Court on *May 22* (Messrs. Franklin Dyall, Leslie Banks, and Harcourt Williams, and Mesdames Jeanne Casalis and Madeline White).

FIRES IN LONDON.

The aggregate value of property destroyed in London fires in 1921 was estimated at £1,899,223. The calls totalled 7,855, as against 6,554 in 1920; the fires numbered 4,418, compared with 3,474. Those classed as serious outbreaks were 46 (58 in 1920). False alarms were 2,113, and chimney fires, 863, contrasted with 1,754 and 808 in 1920. There were 461 malicious false alarms, against 518. The lives lost were 73 (24 male, 49 female) as compared with 95 (31 male, 64 female) in 1920. 80 persons whose lives were in danger were rescued; 260 males and 99 females were injured, and 164 persons received first-aid treatment.

The following Statistics of Crimes and Offences are given in the Government return "Judicial Statistics, England and Wales, 1920," and in the "Report on the Judicial Statistics of Scotland for the year 1920."

ENGLAND AND WALES.

CRIMES AND OFFENCES.

The number of persons tried for indictable offences in 1920 was 60,617, as against 53,541 in 1919, and 63,269 in 1913. The increase in 1920 may perhaps be regarded as a reversion to normal figures consequent upon the return to civil life of the large portion of the population which during the War was serving with His Majesty's Forces. The increase in 1920 occurs mainly under the headings of larcenies and frauds, which increased from 45,576 to 51,679; the figure for 1913 was 54,256. More serious offences against property show a greater increase proportionately to their number. Offences of the burglary and housebreaking class increased from 3,977 in 1919 to 4,722 in 1920, the figure for 1913 being 3,984. The increase is mainly in offences of shopbreaking, which have steadily increased since 1915, the number in 1920 being 2,938, as against 1,886 in 1913.

Offences of violence against the person rose from 981 in 1919 to 1,107 in 1920, but the figures for 1913 were 1,387. Sexual offences increased from 2,159 in 1919 to 2,329 in 1920, in spite of a fall from 917 to 722 of cases of bigamy. The total for sexual offences in 1913 was 1,939.

The total of the less serious offences within the ordinary jurisdiction of *Courts of Summary Jurisdiction* increased from 493,047 in 1919 to 611,821 in 1920, the total for 1913 being 680,290. The figures under the headings mainly accountable for the variations in the totals were as follows:—

Description of Offence.	1913.	1919	1920.
Assaults	43,147	34,479	45,196
Dogs, Offences in relation to	6,536	26,810	12,361
Highway Acts Offences:—			
Motor Cars	25,701	38,383	76,070
Other Offences ...	50,310	72,550	89,720
Drunkenness	204,038	61,376	98,606
Police Regulations Offences.....	106,500	57,801	78,642
Begging and Sleeping Out.....	27,523	3,510	6,209
All other Offences ...	216,526	198,138	204,917
Total.....	680,290	493,047	611,821

PROCEEDINGS IN CRIMINAL COURTS.

Assizes and Quarter Sessions.—The number of persons for trial at Assizes and Quarter Sessions was 9,130, as against 7,883 in 1919 and 12,509 in 1913. The decrease as compared with 1913 was almost wholly in persons for trial at Quarter Sessions, the numbers for 1920, 1919 and 1913, being, respectively, 5,225, 4,217 and 8,454. The numbers for trial at Assizes were 3,905, 3,666, and 4,055.

The results of the proceedings in Courts of Assize and Quarter Sessions may be briefly stated as follows:—Of the 9,130 persons who were brought up for trial 31 were not actually tried—in five cases the prosecution was not proceeded with, and in 26 cases the jury found that the accused was insane and unfit to plead. There

remain 9,099 persons actually tried, of whom 1,847 were acquitted, and 7,255 convicted, while 27 persons were found "guilty, but insane," and were ordered to be detained during His Majesty's pleasure.

Court of Criminal Appeal.—There were 471 applications for leave to appeal: leave was granted in 81 cases. In addition, there were 13 appeals on grounds involving questions of law, eight with the certificate of the Judge at Trial, and nine appeals against sentences of preventive detention, making a total of 111 appeals for hearing, as against 93 in the preceding year, and 157 in 1913. In 59 cases the conviction or sentence was affirmed, in 51 cases the conviction or sentence was quashed (including 33 cases in which other sentences were substituted), and one appeal was abandoned.

Courts of Summary Jurisdiction.—The number of persons tried by Courts of Summary Jurisdiction in 1920 was 663,308, of whom 51,487 were charged with indictable offences, and 611,821 with non-indictable offences.

The number of persons who were discharged was 68,675, while 69,404 were dealt with without conviction after the charge was proved, and 525,229 were convicted.

The 69,404 cases where the charges were proved, but in which orders were made without conviction, consisted of 44,025 cases in which the charge was dismissed; 13,354 in which recognizances were ordered with or without sureties under Section 1 of the Probation of Offenders Act, 1907; 10,103 cases in which, in addition, probation orders were made under Section 2 of the same Act; 1,773, in which children under 14 were committed to industrial schools; 17 in which children were committed to the custody of relatives, &c., and 132 in which the persons charged were sent to institutions for defectives, &c.

The 525,229 persons convicted were dealt with as follows:—

Sentenced to—

Imprisonment	24,440
Detention in Police Cells	335
Detention in Reformatory School	878
Whipping	1,325
Fine	495,530
Ordered to enter into Recognizances	1,998
Otherwise disposed of	723

As regards proceedings not strictly criminal in character, Courts of Summary Jurisdiction made 12,198 orders for sureties to keep the peace or to be of good behaviour (against 15,853 in 1913), 9,801 orders for the maintenance of illegitimate children (against 6,914 in 1913), 11,602 orders for the maintenance of wives (against 7,959 in 1913), 1,883 orders for the maintenance of children in reformatory and industrial schools, &c., and 2,814 orders under the Poor Law Acts for the maintenance of families, relatives, &c. The number of separation orders granted was 6,044, as compared with 5,173 in 1913. Orders were made for the payment of wages in 1,794 cases, for dealing with nuisances under the Public Health Acts, &c, in 3,863 cases, and for possession of small tenements in 5,759 cases.

The number of appeals against convictions by Courts of Summary Jurisdiction was 354. In 217 cases the conviction was affirmed (with modifi-

cation of sentence in 85 cases); in 113 cases the conviction was quashed, and in the remaining 24 cases the appeal was abandoned.

Juvenile Courts.—The total number of persons brought before Juvenile Courts in 1920 was 38,143, *viz.*, 19,505 children, 16,559 young persons, and 2,079 persons aged above 16. Deducting the latter persons and adding 837 children and 3,297 young persons who were dealt with by ordinary Courts of Summary Jurisdiction, either because they were charged jointly with adults or because they were supposed to be above 16, we get a total of 40,198 juvenile offenders (20,342 children and 19,856 young persons). This total is less than 6 per cent. of the whole number of persons proceeded against for criminal offences. The number of juvenile offenders in 1913 was 38,341.

Of the 35,959 youthful offenders brought before Juvenile Courts (omitting 105 who were not tried summarily), 3,855 (or 11 per cent.) were acquitted, orders without conviction were made against 14,229 persons (or 39 per cent.), and 27,875 persons (or 50 per cent.) were convicted.

Of the 14,229 juvenile offenders who were proved guilty but not "convicted," 6,355 were discharged (in some cases being ordered to pay damages or costs), 2,339 were ordered to enter into recognizances, 4,691 were placed under the supervision of probation officers, 812 were sent to industrial schools, and 32 were placed in the care of relatives, sent to institutions for defectives, &c.

There were 12 youthful offenders* sentenced to imprisonment, 46 were sentenced to confinement in places of detention, 824 were committed to reformatory schools, 1,285 males were ordered to be whipped, and 15,591 (or 87 per cent. of the number convicted) were sentenced to pay fines. In 3,097 cases the fine was ordered to be paid by the parent or guardian of the defendant.

Probation Orders.—During the year 1920 probation orders were made in respect of 10,735 persons (as compared with 11,071 in 1913), including 590 persons convicted on indictment, 7,775 persons tried summarily for indictable offences, and 2,345 persons charged with non-indictable offences.

Only 475 persons, equivalent to 5 per cent. of the persons against whom probation orders were made in 1920, were called up for sentence during the year. Of this number 115 were discharged, 131 were dealt with for fresh offences, and 229 were sentenced or otherwise disposed of (including 121 sentenced to imprisonment) in connection with their original offence.

EXTRADITION AND FUGITIVE OFFENDERS.

During the year 1920 there were only 10 applications for *Extradition* received from Foreign Governments. In seven cases the accused person was extradited. The applications by the British Government for extradition to the United Kingdom numbered four. Under the *Fugitive Offenders' Act*, four persons were sent back from this country for trial in the British Colonies, and three fugitives from justice were brought back to England.

* Children under 14 may not be sentenced to imprisonment nor committed to prison in default of payment of fines, damages, or costs. Nor may young persons aged 14 to 16 years be so dealt with unless the Court certifies that the young person is of so unruly a character that he cannot be detained in a place of detention, or that he is of so depraved a character that he is not a fit person to be so detained. (Children Act, 1908, sec. 102.)

PUBLIC PROSECUTIONS.

The number of prosecutions undertaken by the Director of Public Prosecutions was 670. There were 129 capital cases, 642 of the prosecutions were instituted at the instance of Government Departments, and judges, magistrates, police, etc., and only 28 at the instance of private persons. The number of persons prosecuted was 869, of whom 811 were charged with indictable offences, including 150 persons prosecuted for murder, 66 for incest, 89 for other offences against the person, 248 for frauds of various descriptions, 12 for bankruptcy offences, 157 for other offences against property, 19 for offences in connection with the currency, and 70 for other felonies and misdemeanours. The remaining 58 persons were prosecuted for various non-indictable offences. Of the 869 persons prosecuted, 638 were convicted and 16 were found "guilty, but insane."

POLICE STATISTICS.

Indictable Offences.—The number of indictable offences reported to the police or otherwise coming within their cognizance, was 100,827. For these offences 53,158 persons were arrested, while 11,225 were dealt with by way of summons.

Of the 64,383 persons prosecuted, 9,055 were discharged, including 5,626 who were tried summarily and acquitted; orders were made without conviction in respect of 17,719 persons against whom the charges were proved; 28,142 were tried summarily and convicted; 9,219 were sent for trial at Assizes and Quarter Sessions; and 248 were otherwise disposed of, being for the most part bound over to come up for further examination if required or the proceedings adjourned *sine die*.

Bail was allowed in the case of 3,279 or 36 per cent. of the 9,219 persons committed for trial.

Non-Indictable Offences.—Of the 627,142 persons charged with non-indictable offences, 173,975 were apprehended and 453,167 proceeded against by summons.

CORONERS' INQUESTS.

Out of the total number of 31,496 deaths upon which inquests were held, 11,748 were found to be due to natural causes, including old age, 13,441 were accidental, 337 were still-births, and in 1,733 cases open verdicts were returned. There were 3,373 verdicts of suicide, as against 3,475 in 1913.

Verdicts of wilful murder were returned in 192 cases. In 40 of these cases the inquests were held upon the bodies of newly-born children. In 27 cases the persons against whom verdicts of wilful murder were returned committed suicide at the time of the murder. In addition to the 192 cases of wilful murder, there were 89 verdicts of manslaughter, making altogether a total of 281 culpable homicides. In 1913 there

were 194 cases of wilful murder, and 99 verdicts of manslaughter.

PENAL STATISTICS.

Prison Returns.—The returns from the prisons show that the total number of convicted prisoners received into prison during the year 1920 was 43,850, exclusive of 901 prisoners convicted by Courts-martial. Of this number, 5,712 came from Courts of Assize and Quarter Sessions, and 38,138 from Courts of Summary Jurisdiction. There were 35 persons received under sentence of death, 485 under sentences of penal servitude, and 42,281 under sentences of imprisonment. The corresponding figures for 1913 were 28,815, and 137,468.

Twelve per cent. of the sentences of imprisonment were for one week and under, and 15 per cent. were for more than one week and not more than two, while less than 2 per cent. were for periods longer than one year.

There were also 4,754 non-criminal prisoners received, including 202 surety prisoners and 4,296 debtor prisoners. County Court debtors numbered 234, and 4,024 were committed by Courts of Summary Jurisdiction, including 209 for non-payment of rates and 3,311 for non-payment of maintenance.

Borstal Institutions.—Seven hundred and seventy-four persons (698 males and 76 females) were admitted on conviction, of whom 560 were convicted on indictment. As compared with 1913, there was an increase of 227 males and 28 females. Two hundred and ninety-two were convicted of burglary and similar offences, and 404 of larceny and fraud. The periods of detention ordered were two years, 96; three years, 670; and under three years but over two years, seven. The total included 708 persons who had been previously convicted.

Reformatory Schools.—In 1920 there were 941 youthful offenders admitted, on conviction, to reformatory schools, of whom 10 were sent by Courts of Assize and Quarter Sessions, and 931 by Courts of Summary Jurisdiction. The number of youthful offenders admitted on conviction in 1913 was 1,224.

Industrial Schools.—The total number of children admitted to ordinary industrial schools was 1,409, as against 2,933 in 1913. Of this number, 616 were charged with crime; the remainder were mainly children found begging or wandering without a home, or not under parental control, or not attending elementary schools.

In addition to the above figures, which relate only to ordinary industrial schools for long terms of detention, 442 boys were sent to be detained for briefer periods to "short term" schools, and 304 boys and 135 girls, most of whom were truants, were admitted to day industrial schools.

Places of Detention.—The number of children and young persons committed to Places of Detention for temporary custody was 4,201, and in addition 49 were received after conviction under sentences of detention. The net numbers received, counting only one reception on the same charge was 4,223 (3,775 boys and 448 girls). In 1913 the net number received was 6,972.

Criminal Lunatics.—The number of criminal lunatics received into asylums during 1920 was 148 (as against 218 in 1913), of whom 52 were found insane by verdict of jury, 12 were certified insane while under detention on remand or awaiting trial, and 84 were certified insane while serving

sentence in prison. Seventy-six of the criminal lunatics were received into Broadmoor Criminal Lunatic Asylum; the remainder, mostly persons serving short sentences, who would soon become pauper lunatics, were received into County and Borough Asylums.

The total number of criminal lunatics under detention at the end of the year was 891, of whom no less than 402 had been charged with murder; 199 persons had been detained upwards of 20 years.

THE PREROGATIVE OF MERCY.

Out of 35 sentences of death, 13 were commuted to penal servitude for life.

Four free pardons were granted; remission of various terms of imprisonment and other punishments were granted to 75 persons; while 16 convicts were released on licence in special cases at earlier dates than those allowed by the ordinary regulations. The requirement of police supervision was remitted in respect of 64 persons released on licence.

Excluding the last class, the total number of cases in which the prerogative of mercy was exercised was 108. In 32 cases the remission was granted on medical grounds, and in 65 cases on such grounds for mitigation as youth or provocation. Four persons were released on grounds affecting the original conviction:

SCOTLAND.

CRIMES AND OFFENCES.

The total number of persons dealt with in Criminal Courts during the year was 143,075,* an increase of 41,388 or 40·7 per cent. over the number for the previous year. The increase in the number of persons proceeded against for serious crime (represented by Classes I. to VI.) was 1,816, and in the number charged with minor offences (represented by Class VII.), 39,572.

SERIOUS CRIME.

In the case of serious crime the largest increase under any special crime occurs in Assaults by Husbands on Wives, viz. 956. There are conspicuous increases also under the following sub-heads:—Assaults and Assaults on Officers of Law, 348 persons dealt with in 1920, as against 182 in 1919; Intimidation and Molestation, 102 against 5; Cruel and Unnatural Treatment of Children, 392 against 285; Sexual Crimes, 456 against 286; and Indecent Exposure, 1,016 against 608. Under Malicious Mischief, there is a drop from 4,024 in 1919 to 3,493 in 1920, the total for the general class Malicious Injuries to Property being the lowest recorded since the classification of such offences was revised in 1883.

TRIALS FOR MURDER.

(Scotland).

Year.	Number.	Year.	Number.
1911.....	6	1916.....	7
1912.....	7	1917.....	5
1913.....	8	1918.....	6
1914.....	7	1919.....	8
1915.....	10	1920.....	12
5 year average	8	5 year average	8·11

MINOR OFFENCES.

In Minor Offences the large increase is accounted for mainly under Breach of the Peace

* A person dealt with on two or more occasions within the year is in this Report counted as two or more persons.

and Drunkenness, for which offences the numbers dealt with rose from 46,381 in 1919 to 76,460 in 1920. The following Table shows the numbers dealt with for these offences in certain years:—

Sex.	1910.	1915.	1919.	1920.
Males.....	60,077	59,666	36,479	61,150
Females	20,047	21,719	9,902	15,310
Total.....	80,124	81,385	46,381	76,460

The other outstanding increases in Minor Offences appear under:—Police Acts Offences, 15,000 against 10,932 in the previous year; Road Acts, &c., Offences, 7,665 against 5,360; and Defence of the Realm Act (War Legislation), 8,054 against 4,922, the increase under which is due almost wholly to the large numbers proceeded against for contraventions of the regulations regarding Lights on Vehicles. The chief decreases occur in Offences against Naval and Military Laws (mainly Deserters and Absentees), 1,412 against 3,449; and in Offences against the Tramways Act, 462 against 1,150.

PERSONS CONVICTED.

Of the 143,075 persons proceeded against in the year 1920, 100,323 were convicted.

In 1920 the number of persons disposed of summarily was 121,525 as compared with 100,393 in the previous year, and the number disposed of after full committal was 1,550 as compared with 1,294. In the latter class the increases occur principally under Theft by Housebreaking, 218 against 106; and Theft, 300 against 168; while the most noticeable decrease is under Fraud, 128 against 182.

Two males were sentenced to be executed in 1920, and in both cases the sentence was carried out.

PENAL SERVITUDE.

The number of persons sentenced to *Penal Servitude* was 76 (all males) as against 58 (including 3 females) in 1919. Of these, 3 were sentenced to *Preventive Detention* in addition, one to a term of seven years and two to terms of five years. The number sentenced to *Penal Servitude* during 1920 is only less by 7 than the number for 1914. The average for the five years ended 1919 was 47.

The lengths of the 76 sentences of *Penal Servitude* passed in 1920 were as follows:—3 years, 31; 4 years, 3; 5 years, 26; 7 years, 11; 8 years, 2; 10 years, 1; 12 years, 2. The crimes for which this punishment was imposed were—Housebreaking, &c (Class II.), 32; Theft, Fraud and Reset (Class III.), 16; Attempts to Murder, &c. 2; Culpable Homicide, 3; Assaults, 2; and Sexual Crimes, 21.

The number of persons disposed of under the *Probation of Offenders Act, 1907*, during the year was 2,799 or 2.57 per cent. of the total number tried, as against 3,97 per cent. in 1919, and 5.46 per cent. in 1918. The Commissioners cannot but regard it as alike regrettable and remarkable that the methods of dealing with certain classes of offenders (particularly first offenders) authorised by that Act should be so little appreciated, and should apparently be losing favour rather than gaining it; as there is no doubt in their minds that in a large proportion of such cases none of the authorised methods of disposal is so likely to result in the re-establishment and reformation of the offenders as Probation, provided it be carried out with system and method under paid supervisors as in America and elsewhere.

Probation Orders under Sec. 2 of the Act were made in the case of 1,616 persons, of whom 192 appeared later in the year for sentence. Of this latter number 43 were sentenced to imprisonment, 10 were sent to Reformatory or Industrial Schools, 41 dealt with for fresh offences, and 98 discharged or otherwise disposed of. The proportion of offenders who thus appeared for sentence after having been placed under Probation Orders is much higher than in the previous year, amounting to 11.88 per cent. as compared with 6.32 per cent. in 1919.

DEPORTATION.

101 convicted persons of foreign nationality were received into prisons in 1920, and of these only 3 were recommended for *Expulsion or Deportation* under the *Aliens Orders, 1919 and 1920*.

BORSTAL INSTITUTIONS.

The total number of receptions into *Borstal Institutions* during the year was 152—130 males and 22 females. Of this number only 10 males and 8 females had not been previously convicted. The number convicted of Theft by Housebreaking, &c. (Class II.) was 71 (the same number as last year), and of Theft, Fraud, &c. (Class III.) 77. The remaining 4 were convicted of Sexual Crimes. Those sentenced to the maximum period of 3 years' detention numbered 145. During the year 145 persons were released on licence from *Borstal Institutions*. Of the total number released on licence, 38 had previously been liberated on licence, and had had their licences revoked. Revocations of licence during the year numbered in all 86, of which 59 took place before the expiration of the period of detention ordered, and 27 during the added period of one year's supervision prescribed by the Prevention of Crime Act, 1908, as amended by the Criminal Justice Administration Act, 1914.

CRIMINAL LUNATICS.

14 males and 1 female were received into the *Criminal Lunatic Department* of Perth Prison during the year. Of this number 2 males and 1 female were conditionally liberated cases re-admitted on revocation of order of conditional discharge, 8 were males placed at H.M. Pleasure, and 4 males transferred from prison because of insanity commencing after date of conviction. During the year 11 males were discharged and 1 died, leaving 65 males and 5 females in confinement at the end of the year.

INEBRIATE REFORMATORIES.

The number of persons committed to *Inebriate Reformatories* during the year was 7 as against 2 in the year 1919. All were females, 6 tried summarily and 1 on indictment. The latter was committed to the State Inebriate Reformatory, Perth, and the others to Greenock Certified Inebriate Reformatory. Final discharges during the year numbered 6, Releases on Licence 3, while 2 inmates were temporarily absent at the end of the year, leaving 7 in custody, which is the lowest number recorded since the year 1902, when particulars of inebriates were first included in this Report.

PREROGATIVE OF MERCY.

The *Prerogative of Mercy* was exercised in the case of 16 males and 2 females; in 13 of these cases this was done in simple mitigation of sentence, and in 4 cases on medical grounds.

I.—PERSONAL PROPERTY, INCLUDING LEASEHOLDS.*The person entitled to administer is shown in brackets.***In each instance it is supposed there are no nearer relations than those named.**

By the Intestates' Estates Act, 1890, the widow of a man dying intestate and without issue is entitled to the whole estate both real and personal if under £500 in value; if over that amount she takes £500 out of the real and personal estate rateably before any division is made, and after that the share in the remainder to which she was entitled before the passing of the Act.

*If the Intestate die, leaving**His representatives take in the proportions following:—*

Widow only.....	Half to widow. Half to the Crown. [Widow.]
Widow and child or children	One-third to widow, two-thirds to children in equal shares. In case of deceased children who have left issue, such issue take amongst them their deceased parent's share. [Widow.]
Widow and father.....	Half to widow. Half to father. [Widow.]
Widow and mother, no father	Half to widow. Half to mother. [Widow.]
Widow, brothers or sisters	Half to widow. Half equally amongst brothers and sisters, whether of the whole or half blood; if a deceased brother or sister has left issue, such issue take amongst them their deceased parent's share. [Widow.]
Widow, mother, nephews or nieces	Half to widow. One-fourth to mother. One-fourth to nephews and nieces <i>per stirpes</i> . [Widow.]
Husband, with or without children	All to husband. [Husband.]
Father, brothers, and sisters	All to father. [Father.]
Mother, brothers, and sisters	All equally. [Mother.]
Mother, but no other kin	All to mother. [Mother.]
Children, and grandchildren by deceased children	Amongst children in equal shares, the grandchildren taking amongst them their deceased parent's share. [Any number of children not exceeding three.]
Brother or sister, and nephews or nieces	Amongst brothers or sisters in equal shares, the children of deceased brothers or sisters taking amongst them their deceased parent's share. [Brother or sister.]
Brother or sister, and grandfather.....	All to brother or sister. [Brother or sister.]
Brother or sister, and uncles or aunts	All to brother or sister. [Brother or sister.]
Grandfather, no nearer relation	All to grandfather. [Grandfather.]
Father's father, and mother's mother	Equally to both. [Either or both.]
Grandmother, uncles, and aunts	All to grandmother. [Grandmother.]
Great-grandfather, uncles, and aunts	Equally <i>per capita</i> . [To either or any number not exceeding three.]
Uncles and aunts	All equally. [To either or any number not exceeding three.]
Uncle, and deceased uncle's child	All to uncle. [Uncle.]
Uncle by mother's side, and deceased uncle or aunt's child	All to uncle. [Uncle.]
Aunts, nephew, and niece	All equally. [Either not exceeding three.]
Cousins	Equally <i>per capita</i> . [Any number not exceeding three.]
Nephew by brother, and nephew by half-sister...	Equally <i>per capita</i> . [Any number not exceeding three.]

NOTE A.—Taking *per capita* is taking by head individually. Taking *per stirpes* is taking by descent or representation. Thus, if A. die leaving three brothers or sisters, and no nearer kin, they each take an equal part of his personal estate in his or her own right, *i.e.*, *per capita*. If there are also children of a deceased brother or sister they share in the estate by taking amongst them the share which their deceased parent would have taken had he or she survived, *i.e.*, *per stirpes*.

NOTE B.—By English Law, brothers and sisters of the half blood share equally with the whole blood.

II.—REAL PROPERTY.

(N.B.—Leaseholds are Personal Property.)

Table of Descent of Real Property in England & Wales and Ireland on death of an intestate. No illegitimate child is capable of inheriting real estate. Custom of *Gavelkind* (descent to all sons alike) still exists in Kent, and custom of *Borough English* (descent to youngest son) in divers ancient boroughs. The *Dower* (*viz.*, widow's thirds) of widows married since 1133 is in the majority of cases barred.

In each instance it is supposed there are no nearer relations than those named.*If Intestate die, leaving**Real Property would descend to—*

Wife only, no blood relations	{ One-third to wife for life, rest to Crown; copyholds to lord of manor.
-------------------------------------	--

If Intestate die, leaving

Real Property would descend to—

Wife and child or children, and children of a deceased child	One-third to wife for life in any case. Rest to eldest son or his issue, such son and his issue, whether male or female, being preferred to any other son and his issue, and all sons and their issue, whether male or female, being preferred to all daughters and their issue, whether male or female. If no son, rest to daughters equally. If daughters and grandchildren (sons and daughters of deceased daughter), rest to daughters and eldest son of deceased daughter.
Wife and father	One-third to wife for life; rest to father, if deceased purchased same, or had it left him by will.
Wife and mother	One-third to wife for life; rest to mother, there being no heirs on father's side.
Wife, brother, or sister, and children of a deceased brother or sister	One-third to wife for life in any case, rest to eldest brother or his issue. (<i>See above</i> , "Rest to eldest son or his issue," under head "Wife and child," &c.) Sister and children of deceased sister, rest equally between sister and nephew (eldest). Sisters and nieces, only, children of deceased sister, rest equally between sisters and nieces, nieces taking <i>per stirpes</i> .
Wife, mother, nephews, and nieces	One-third to wife for life; rest to nephew (eldest), or nieces, if brother left no son.
Wife, mother, brother, sisters, and nieces (children of deceased brothers and sisters)	One-third to wife for life in any case; rest to eldest brother. Rest to nieces, equally, if children of elder brother deceased.
No wife or child or issue of a deceased child	Lineal ancestor paternal, males of whole blood first.
Children by one or more wives, and the issue of deceased children	All to eldest son, or his issue. (<i>See above</i> , "Rest to eldest son or his issue," under head "Wife and child," &c.) Daughters equally.
Husband and child or children ...	Husband for life (provided the wife, or the husband in her right, was at some time during the coverture solely seized in possession of the legal or equitable estate); afterwards to only child or to eldest son or issue of a deceased eldest son. If all daughters, to them equally.
Mother, but no wife, child, or issue of a child, father, brother, sister, nephew, or niece, or more distant descendants of father...	All to mother in default of lineal ancestors on the father's side, or issue of such ancestors.
Mother, and brothers and sisters	All to eldest brother.
Mother and sisters	All to sisters.
Father, and brothers and sisters	All to father.
Child and grandchild by deceased child	<i>See above</i> , "Rest to eldest son or his issue," under head "Wife and child," &c.
Brother and grandfather	All to brother.
Brother's grandson, and brother or sister's daughter	All to great-nephew, if eldest brother's grandson. All to brother's daughter, if child of eldest brother.
Brother and two aunts	Brother, all.
Brother and wife	One-third to wife for life; rest to brother.
Grandfather (no nearer)	All to grandfather.
Father's father & mother's mother	All to father's father.
Grandmother & uncle, or aunt on father's side (no nearer)	All to uncle or aunt.
Uncle, and deceased uncle's child	Uncle, unless deceased uncle was elder brother, when his child takes all.
Uncle by mother's side, and deceased uncle or aunt's child ...	Child of deceased uncle on father's side, or (if none) child of deceased aunt on father's side.
Two aunts, nephew, and niece, children of deceased brother ...	Nephew.
Uncle or aunt's children, and brother's grandchildren through a son	Eldest brother's grandson, or if granddaughters between them equally.
Nephew by brother, and nephew by half-sister	Nephew by brother.
Nephew by deceased brother, and nephews and nieces by deceased sister	All to eldest nephew, son of deceased brother.

NOTE A.—By the Land Transfer Act, 1897, the real estate of a deceased person devolves to the personal representative of the deceased, and probate and letters of administration may be granted in respect of real estate only, although there is no personal estate. The ultimate ownership of real estate is not affected by these provisions, which are for the convenience of administration. As to the persons entitled to administration of real estate, they are substantially the same as in the case of personal estate; but the Court shall, in granting letters of administration, have regard to the rights and interests of persons interested in the real estate, and the heir-at-law, if not one of the next-of-kin, shall be equally entitled to the grant with the next-of-kin.

Intestates' Estates, Scotland.

I.—MOVABLES.

In each instance it is supposed there are no nearer relations than those named.

By the Intestate Husband's Estate (Scotland) Act, 1911, the widow of a man dying intestate and without issue is entitled to the whole estate both heritable and movable if under £500 in value; if over that amount she takes £500 out of the heritable and movable estate rateably before any division is made, and after that the share in the remainder to which she was entitled before the passing of the Act.

<i>If the Intestate die, leaving</i>	<i>His representatives take in the proportions following:—</i>
Widow only	Half to widow, half to next of kin, or if none, then to the Crown.
Widow and child or children	{ One-third to widow. Remaining two-thirds to child or among children equally.
Widow and children and issue of predeceasing children	{ One-third to widow, one-third to living children equally, remaining third amongst living children <i>per capita</i> * and issue of deceased children <i>per stirpes</i> .*
Widow and father	Half to widow, half to father.
Widow and mother, no father	Half to widow, one-half to mother.
Widow, brothers or sisters	{ Half to widow, half equally amongst brothers and sisters whether of the whole or half blood consanguinean. If a deceased brother or sister has left issue, such issue take amongst them their deceased parent's share.
Widow, mother, nephews or nieces	Half to widow, one-half to mother.
Husband, with or without children	Half to husband, half to wife's next of kin.
Father and mother	Whole to father
Father, mother, brothers and sisters	Half to father; half to brothers and sisters equally.
Father and mother and their grandchildren	{ Half to father; half to grandchildren equally <i>per stirpes</i> .
Father, brothers and sisters	{ One-half to father, one-half equally amongst brothers and sisters.
Mother, brothers and sisters	Mother one-half, brothers and sisters one-half equally.
Mother, but no other kin	Whole to mother.
Child, children or grandchildren by deceased children	{ Amongst children in equal shares, the grandchildren by deceased children taking amongst them their deceased parent's share.
Brothers or sisters and nephews or nieces	{ Amongst brothers or sisters in equal shares, the children of deceased brothers or sisters taking amongst them their deceased parent's share.
Brother or sister and grandfather	All to brother or sister.
Brother or sister and uncles or aunts	All to brother or sister.
Grandfather, no nearer relation ...	All to grandfather.
Father's father and mother's mother	All to father's father.
Grandmother, uncles and aunts ...	All to uncle and aunts, if paternal.
Great-grandfather, uncles and aunts	All to uncles and aunts, if paternal; if not, then to paternal great-grandfather.
Uncles and aunts	All equally.
Uncle and deceased uncle's child ...	All to uncle.
Uncle by mother's side, and deceased uncle or aunt's child	Child of deceased paternal uncle or aunt takes to exclusion of maternal uncle.
Aunts, nephew and niece	Nephew and niece.
Cousins	Equally <i>per capita</i> .*
Nephew by brother, and nephew by half-sister	All to nephew by brother.

NOTE A.—Illegitimate children do not succeed to their father or mother as heirs in intestacy.

NOTE B.—In Scotland, a lease on intestacy and in the absence of any destination descends to the heir-at-law.

NOTE C.—When a person dies intestate leaving heritable estate as well as movables, the heir to the heritage, if he is also one of the next-of-kin, is not entitled to any of the movables if he takes the heritage. He may, however, "collate" the heritage, *i.e.*, share it with the other next-of-kin and thus get an equal share of the mixed estate.

* *Per Capita* means by the head; *per stirpes* means inheriting through a parent deceased. Movables taken *per capita* divide into as many shares as there are children. Where representatives of a deceased parent take *per stirpes* they take equally amongst them the share that would have fallen to the deceased had he or she survived.

II.—HERITAGE.

Table of Succession to heritable property in Scotland on intestacy and in the absence of any destination in the property writs, other than "to heirs and successors."

In each instance it is supposed there are no nearer relations than those named.

*If Intestate die leaving**Heritage would descend to:—*

(1) Wife only ; no blood relations.	One-third to wife for life ; rest to Crown as <i>ultimus hæres</i> .
(2) Wife and child or children, and children of a deceased child...	One-third to wife for life. Fee to eldest son or his heir male. If no son then to daughters equally. The eldest son of a deceased daughter taking his mother's place.
(3) Wife and father	One-third to wife for life, rest to father.
(4) Wife and mother	One-third to wife for life. Fee to nearest heir male.
(5) Wife, brother, or sister, and children of a deceased brother or sister	One-third to wife for life. Fee to immediate younger brother and his heir male ; if none, then to immediate elder brother.
(6) Wife, mother, nephews and nieces	One-third to wife for life ; rest to nephew (eldest) or nieces equally if brother left no son. See No. 2.
(7) Wife, mother, brother, sisters and nieces (children of deceased brothers and sisters)...	One-third to wife for life ; rest to younger brother and his heirs. If the only heirs are nieces they will take equally. If no younger brother then to immediate elder brother and his heirs in the same way. If sisters but no brothers the sisters take equally, and if the sisters have predeceased leaving only daughters they succeed equally.
(8) No wife or child or issue of a deceased child	To brother as in (5) whom failing to lineal ancestor paternal and his heirs.
(9) Children by one or more wives and the issue of deceased children	All to eldest son or his issue. If no male issue then to female issue as in (2).
(10) Husband and child or children	Liferent of whole to husband. Fee to eldest son.
(11) Mother, but no wife, child or issue of a child, father, brother, sister, nephew or niece or more distant descendants of father	Nearest paternal collateral (uncle or his heirs). If none, then to grandfather and his heirs.
(12) Mother and brothers and sisters	All to younger brother whom failing to immediate elder brother.
(13) Mother and sisters	All to sisters equally.
(14) Father and brothers and sisters	Fee as in (5).
(15) Child and grandchild by deceased child	(See No. 2.) "Rest to eldest son or his issue," under head, "Wife and child," etc.
(16) Brother and grandfather	All to brother.
(17) Brother's grandson, and brother or sister's daughter	All to great-nephew, if grandson of brother (conforming to Nos. 2 and 7). All to brother's daughter, if child of eldest brother.
(18) Brother and two aunts	Brother, all.
(19) Brother and wife	One-third to wife for life ; rest to brother.
(20) Grandfather (no nearer).....	All to grandfather.
(21) Father's father and mother's mother	All to father's father.
(22) Grandmother and uncle, or aunt on father's side (no nearer)	All to uncle or aunt.
(23) Uncle and deceased uncle's child	If deceased uncle was younger brother, then to child. If both brothers older than intestate, then to the younger of them or his heir male.
(24) Uncle by mother's side, and deceased uncle's or aunt's child	Child of deceased uncle on father's side, or (if none) child of deceased aunt on father's side.
(25) Two aunts, nephew and niece, children of deceased brother	Nephew.
(26) Uncle or aunt's children, and brother's grandchildren through a son	Brother's grandson, or if granddaughters between, then equally (conforming to Nos. 2 and 7).
(27) Nephew by brother, and nephew by half-sister.	Nephew by brother.
(28) Nephew by deceased brother, and nephews and nieces by deceased sister	All to eldest nephew, son of deceased brother.

NOTE.—In Scotland succession to heritage on intestacy NEVER ascends to the mother and her relations. Even the mother's own estate, after vesting in her son or daughter, never ascends to the maternal line again.

HALL MARKS ON PLATE.*

Assay Office Marks.—The official marks stamped on gold and silver plate at Assay Offices are distinguished as under:—

Assay Office	Distinguishing Mark.
London (Goldsmiths' Hall)	Leopard's Head (crowned, until 1823).
Birmingham	Anchor (square frame for gold; pointed shield for silver).
Chester	City Arms (3 Garbs and a Sword).
Sheffield	Crown.
Edinburgh	Castle.
Glasgow	Tree, Fish & Bell.
Dublin	Harp crowned.

In addition to the above, there have been Assay Offices at Bristol, Exeter, Newcastle-upon-Tyne, Norwich and York, all of which have long been closed.

Makers' Mark (instituted in 1363).—This is impressed by the maker, and consists of initial letter (or letters) indicating the surname (or Christian and Surname) of the maker.

Date Mark.—The year in which the article is marked at the Assay Office is indicated by a letter on a shield, the type of letter and the shape of the shield being changed in cycles of 20, 25 or 26 years. In 20-year cycles (London, invariably, Chester, alternately with 25 and Sheffield, alternately with 25), the letters J, V, W, X, Y, Z are omitted; in 25-year cycles (Birmingham, Edinburgh and Dublin, and alternately at Chester and Sheffield) the letter J is omitted from the alphabet; at Glasgow all the letters are employed in a 26-year cycle.

The Sovereign's Mark.—The "Lion passant" introduced in the reign of Edward I. (1300) for silver articles only.

The Sovereign's Head.—The portrait of the reigning Sovereign was impressed on all plate chargeable to duty assayed from 1784–1890. The duty on plate was removed in 1890, and the Sovereign's head does not appear on plate assayed before 1784 or after 1890.

The Crown.—On gold articles only, in lieu of the "Lion passant" on silver.

Britannia.—A full-length figure of Britannia was impressed on silver plate of a special standard of fineness (11 oz. 10 dwt. of fine metal to each 10 dwt. of alloy) during a short period only, 1697–1720; since that date the Britannia quality has been manufactured in small quantities, bearing the figure of Britannia, with the Lion's head erased and the date mark.

Sterling Silver.—Articles of silver plate marked at an assay office are guaranteed to be of the requisite standard of purity and to contain 11 oz. 2 dwt. of fine metal to each 18 dwt. of alloy.

Sterling Gold.—Articles of gold plate marked at an assay office are guaranteed to contain such amount of pure gold as is marked thereon by the assaying office in carats and decimals thereof. The relative values of the various standards is shown below:

	£	s.	d.
Pure gold, 24 carats	4	11	1/2
Standard, 22 carats	3	17	10 1/2
2nd ditto, 18 carats	3	3	8 1/2
3rd ditto, 15 carats	2	13	1
4th ditto, 12 carats	2	2	5 1/2
5th ditto, 9 carats	1	11	10 1/2

* For the greater part of the material for this article readers of the ALMANACK are indebted to the late Mr. Wilfrid Cripps (author of "Old English Plate") by whose courtesy also many of the illustrations were provided.

	Old English, capitals	1756-7 to 1775-6	The Collector will find but little difficulty in distinguishing a letter of one cycle from that of another, presuming his knowledge to be insufficient to judge by the style and period of the article itself, <i>e.g.</i> : An article marked with the letter F 1751-2 can be distinguished from letter F 1801-2 by the difference in the shape of the respective shields; as also those containing the crowned leopard's head and the lion passant; the absence of the sovereign's head in the former as against its presence in the latter case; the different form of the leopard's head (which was "crowned" until 1823); and lastly, the irregularity of the stamp in the first case as compared with the uniformity of the latter stamp. These again can be distinguished from F 1881-2 as before, by the different shield of the date letter only (the shields of the remaining marks being the same as those of 1801-2); the absence of crown on leopard's head, and the presence of the Queen's <i>vice</i> the King's head.
	Roman letter, small...	1776-7 .. 1795-6	
	Roman letter, capitals	1796-7 .. 1815-6	Imported Plate. Any gold or silver plate or article manufactured out of the United Kingdom and brought to be assayed, stamped or marked at a British or an Irish Assay Office must be marked in the manner prescribed by the Order in Council of May 11, 1906, under which the mark for each Assay Office is ordained to be:— <i>London</i> , the sign of the Constellation Leo; <i>Birmingham</i> , Equilateral Triangle; <i>Chester</i> , Acorn and two leaves; <i>Sheffield</i> , the sign of the Constellation Libra; <i>Edinburgh</i> , St. Andrew's Cross; <i>Glasgow</i> , double block letter F inverted; <i>Dublin</i> , Boujet. The annual date letter is to be added by the Assay Office, as for plate, etc., of home manufacture.

The Periods of English Architecture.

Date.		Style.
I.	Before B.C. 55	Ancient British.
II.	B.C. 55 to A.D. 420	Roman Period.
III.	A.D. 449 to Norman Conquest (1066)	Anglo-Saxon.
IV.	1066-1189 (<i>i.e.</i> to end 12th cent.)	Norman.
V.	1189-1307 (<i>i.e.</i> 13th cent.)	Early English (Lancet, or Geometrical).
VI.	1307-1377 (<i>i.e.</i> 14th cent.)	Decorated (or Curvilinear).
VII.	1377-1485 (<i>i.e.</i> 15th cent.)	Perpendicular (or Rectilinear).
VIII.	1485-1558 (<i>i.e.</i> first half 16th cent.)	Tudor.
IX.	A.D. 1558-1625 Early Renaissance	Elizabethan (A.D. 1558-1603).
		Jacobean (A.D. 1603-1625).
X.	A.D. 1625-1830. Late Renaissance	Anglo-Classical (A.D. 1625-1702).
		Queen Anne and Georgian (A.D. 1702-1830).
		William IV. (A.D. 1830-1837).
		Victoria (A.D. 1837-1901).
		Edward VII. (A.D. 1901-1910).
		George V. (A.D. 1910-)
Modern Architecture) 19th cent. to present time		(The Age of Revivals)

This Comparative Table shows the approximate period of each style. It must, however, be remembered that the transition from one style to the next was slow and gradual, and can often hardly be traced, so minute are the differences. It is only for convenience in alluding to the different stages of evolution that the division is made, for it must not be forgotten that the Architecture of England is one continuous development.

Note—The first portion (I-VIII) of this table is based upon that given on p. 319, Parts IX, and X on p. 701; and "Modern" on p. 764, of "A History of Architecture on the Comparative Method" (6th ed.), by Sir Banister Fletcher, F.R.I.B.A. (Batsford.)

Staghounds:—England, 9 packs (200 couples); Ireland, 2 packs (40 couples).

Foxhounds:—England and Wales, 265 packs (over 4,800 couples); Scotland, 10 packs (260 couples); Ireland, 22 packs (690 couples).

Harriers:—England and Wales, 45 packs (646 couples); Ireland, 15 packs (209 couples).

Beagles:—England and Wales, 43 packs (538 couples); Scotland and Ireland, 4 packs (52 couples).

PACK	COUPLES.	MASTER.	KENNELS.
Berks and Bucks	20	Major E. W. Shackleton	Beenhams, Waltham St. Lawrence, Berks.
Devon and Somerset	38	Col. W. Wiggan	Exford, Tiverton.

Fitzwilliam, The	40	Mr. G. W. Fitzwilliam	Milton, near Peterborough.
Fuller's, Major (V.W.H.)	47	Major W. F. Fuller	Cricklade.
Garth	44	Major H. R. Cayzer, M.P., and Capt. H. S. Chinnock	Bracknell.
Glamorgan	45	Mr. R. H. Williams	Llandough, Cowbridge, S. Wales.
Grafton	50	Lord Hillington	Paulers Pury, Towcester.
Heythrop	40	Messrs. Brencley and Graeme	Chipping Norton, Oxon.
Holderness	55	Capt. H. Broadley	Elton, near Hull.
Leconfield's (Lord)	50	Lord Leconfield	Petworth Park, Sussex.
Myneill	45	Sir H. Nutting	Sudbury, Derby.
Middleton's (Lord)	52	Lord Grimthorpe and Col. Borwick	Birdsall, Malton, York.
Notts, South	40	Col. R. L. Birkin, D.S.O.	Gedling, Notts.
Oakley	40	Capt. E. F. W. Arkwright	Milton Ernest, Beds.
Portman	45	Capt. W. P. Browne	Bryanston, Blandford.
Puckeridge	40	Messrs. M. and E. Barclay	Brent Pelham, Buntingford.
Pythley	50	Capt. G. Beville	Brixworth, Northampton.
Quorn	50	Mr. W. E. Paget	Barrow-on-Soar, Loughborough.
Rufford	45	Mr. A. J. Bennett	Wellow, Newark.
Somerset (West)	42	Lt. Col. Sir D. F. Boles, Bart., C.M.E.	Carhampton, Taunton.
Southwold	42	Major Jessop & Mr. J. Ramsden	Belchford, Horncastle.
Staffordshire (North)	40	Col. W. W. Dobson	Trentham, Stoke-on-Trent.
Tynedale	40	Mr. J. C. Straker	Stagshaw Bank, Corbridge.
Warwickshire	42	Lord Willoughby de Broke	Kineton, Warwick.
Worcestershire	40	Mr. A. Jones, O.A.K., and Major W. H. Wiggan	Fernhill Heath, Worcester.
York and Ainsty	40	Capt. H. Whitworth	Acomb, York.

Scotland.

Buccleuch's (Duke of)	5	Duke of Buccleuch, K.T.	St. Boswells, Roxburghshire.
Eglinton's (Earl of)	42	Earl of Eglinton	Eglinton, Kilwinning, Ayr.
Linlithgow and Stirling	40	Mr. J. H. Rutherford	Golfhall, Corstorphine.

Ireland

Duhallow	45	Mr. J. S. Shepherd	Blackrock, Mallow, county Cork.
Galway County	44	Mr. J. Pickersgill	Craughwell, county Galway.
Kildare	43	Baron de Robeck	Jigginstown Naas, county Kildare.
Kilkenny	43	Mr. I. Bell	Brownstown, Kilkenny.
Limerick	45	Mr. G. N. E. Baring	Clonsilla, Adare, county Limerick.
Meath	45	Brig.-Gen. E. W. N. Powell, C.B.	Nugentstown, Kells.
Tipperary	54	A Committee	Tullamore, Fethard, Tipperary.
United Hunt	45	Major A. H. Watt, M.C.	Knockgriffin, Middleton, county Cork.
West Meath	40	Mr. E. W. Hope Johnstone	Cullen, Mullingar.

IN the first half of the 17th century (1633 has been cited as the best approach to a definite date) we meet with the earliest mention of the introduction of *rails* for the lessening of friction upon roads. Beams of wood, some six or seven inches in breadth, were about this time laid down to facilitate the draught of the wagons in the vicinity of some of the coal-mines at Newcastle; and as a matter of necessity the addition of "sleepers" had speedily to follow. In 1738, at Whitehaven, it is stated that iron was first substituted as the material of the rails; and in 1767 it appears established that this revolution was adopted at Coalbrookdale, being followed nine years later at the Sheffield Colliery. As yet, however, only thick plates of iron were fastened to the surface of the wooden rails, and it was not till 1789 that "edge rails" were introduced, the credit of their adoption being assigned to William Jessop, on the Loughborough and Nanpantan line. James Watt had conceived the idea of utilising steam for locomotion, and there is a record of a model locomotive having been used in Cornwall in 1784. George Stephenson, however, in the year 1825, was the first to bring the project fairly into practical shape.

The first Act obtained for the construction of a railway was that of the Surrey Iron Railway Company in 1801, for a line $9\frac{1}{2}$ miles long from Wandsworth to Croydon. In 1804 an Act was passed "for making and maintaining a railway or tramroad from the town of Swansea into the parish of Oystermouth, in the County of Glamorgan, and for the hauling or drawing of wagons or other carriages passing upon the said railway or tramroad with men, horses, or otherwise."

Up to 1840, inclusive, 299 Acts, authorizing the construction of 3,000 miles of line, had been passed. The inevitable reaction set in, and in 1841-2-3 only a few small Bills were passed by the Legislature; but in the Liverpool and Manchester, the London and Birmingham, and other leading concerns were paying 10 per cent. dividends, and some of the smaller lines were yielding even larger returns, attention was naturally drawn to the remunerative character of this class of property, and the supply of railway shares became far below the demand. A flood of new projects appeared before the public, and the Legislature even, labouring apparently under the general excitement, encouraged promoters by relaxing or withdrawing the general opposition which had previously been offered. In 1844, 797 miles were authorized; in 1845, 2,883 miles; and in 1846, the prodigious total of 4,790 miles, under no less than 272 Acts, obtained Parliamentary sanction. The succeeding years saw some abatement, but still there were 1,663 miles passed in 1847, and 300 in 1848. These figures illustrate the rise and fall of the great fever known as the "railway mania."

The Railways Regulation Act of 1840, the first of the General Acts, provided for a month's notice being given to the Board of Trade before opening; for returns of traffic to be made by the companies, as also of accidents involving personal injury; for Government inspection of works, for the approval of bye-laws, &c. Afterwards were passed Acts for their better regulations, and for the conveyance of troops, 1842, the Railways Further Regulation Act of 1844, the Railways Clauses Consolidation Act, 1845, and the Canal and Railway Carriers Act of the same session.

The Cheap Trains Act, 1883, provides that fares

not exceeding the rate of one penny per mile shall be exempt from duty, but fares for return or periodical tickets shall be exempt from duty only where the ordinary fare for the single journey does not exceed that rate. Duty shall be payable at a reduced rate of 2 per cent. on fares exceeding the rate of one penny a mile between stations within one urban district. Such district shall contain not less than one hundred thousand inhabitants, and must be of a continuous urban as distinguished from a rural or suburban character.

Officers or men in the military or police forces, when travelling on public service, are charged three-fourths or one-half of ordinary passenger rates, according to number travelling. The Act does not extend to Ireland.

Hiring of Special Trains.—The charges per mile for hire of special trains are 13s. 4d. Single and 20s. Return, plus the ordinary fare for each passenger according to class of vehicle hired.

The Workmen's Compensation Act, 1897.—This Act, which received the Royal assent on Aug. 6, 1897, came into operation on July 1, 1898.

Government Control of Railways commenced August 4, 1914, and ceased at midnight on Monday, August 15, 1921.

THE RAILWAYS ACT, 1921.

The Railways Act, which received the Royal Assent on Aug. 19, 1921, contains 86 clauses, and is divided into six parts, to which are added nine schedules. Under the Act railways in Great Britain are formed into groups. Before Jan. 1, 1923, the constituent companies in any group may submit to the Minister of Transport an agreed amalgamation scheme, and the amalgamated companies may submit agreed schemes for the absorption of the subsidiary companies in their groups. Failing agreement, schemes for amalgamation and absorption are to be settled by the amalgamation tribunal set up under the Act. The date tentatively fixed for the completion of grouping is July 1, 1923, the amalgamations of constituent companies preceding the absorption of subsidiary companies. Agreed amalgamation or absorption schemes must be submitted to the stock and debenture holders concerned before being referred to the tribunal. In the event of postponement later than July 1, 1923, in the case of any group, during the period of postponement the undertakings concerned "may, and shall if the amalgamation tribunal so direct, be used, worked, managed, maintained and repaired as one joint undertaking" and the net receipts shall be distributed as agreed or as may be decided by the tribunal. This tribunal will consist of Sir Henry Babington Smith, G.B.E. (President), Sir William Plender, G.B.E., and Mr. G. J. Talbot, K.C., and will be a court of record. The remuneration of the members of the tribunal and their clerks, &c., must not exceed in the aggregate £35,000 and this and any other expenses have to be defrayed by the Amalgamated Companies. The decision of the Court of Appeal or of the Court of Session on a special case stated by the amalgamated tribunal shall be final, except with leave of such Court. Sections 11 and 12 deal with the payment of £60,000,000 in settlement of the "Railways Compensation Account" in two instalments of £30,000,000. Part Two deals with the protection of the public inasmuch that the railway companies may be required by the Railway and Canal Commission, on a proper complaint being

made, to afford reasonable services, facilities and conveniences. The Minister of Transport may require railway companies to conform gradually to measures of general standardisation of ways, plant and equipment, and to adopt schemes for the co-operative working or common user of rolling stock, workshops, manufactories, plant and other facilities. Under Section 18 the Minister has power to confirm agreements between companies for the purchase, lease or working of railways.

Part 3, Section 20 to 26 deals with the constitution and procedure of Rates Tribunal. They establish a court of record styled the Railway Rates Tribunal, consisting of three permanent members, and the staff attached to it must not exceed 10 persons. Permanent members of the tribunal will be appointed by the Crown on the joint recommendation of the Lord Chancellor, the President of the Board of Trade, and the Minister. In November, 1921, the following appointments to Rates Tribunal were made:—(the late) Sir F. Gore-Browne, K.C., President; Mr. W. A. Jepson, late assistant to General Manager of L. & N.W. Ry., as the railway representative; and Mr. G. C. Lockett, of Messrs. Gardner, Lockett & Hinton, Ltd., London, as the commercial member. The appointments are for a period of seven years, and the members will be paid whole-time officers. The Minister is entitled to be heard in any proceedings before the tribunal which must make an annual report to him for laying before Parliament. With reference to charges for competitive traffic, Section 52 provides that within a prescribed time the companies shall submit schedules of rates where the distance is 30 per cent. or more in excess of the shorter route, and that these schedules shall be referred to the rates tribunal, which will settle the schedule of equal rates by the alternative routes. In the case of new "circuitous routes" (i.e. routes longer by 30 per cent. or more than the shortest route between the two places) the company must submit the route, and the Minister may refer the matter to the tribunal if the difference is above 30 per cent. If it exceeds 50 per cent. the route must have the consent of the tribunal before the equal rates are applied.

The following are the four railway groups.

1. North Western, Midland and West Scottish Group, and contains the following Railways—
L. & N.W. Furness Maryport & C.
Mid. Highland Cocker mouth K. & P.
L. & Y. Caledonian S. on A. & Mid. J.
North Staffs G. & S.W. Other Companies

2. North Eastern, Eastern and East Scottish Group, and contains the following railways—

N.E. G.N. G.N. of S.
G.C. Hull & B. Other Companies
G.E. N.B.

3. Western Group, and contains the following railways—

G.W. Mid. & S.W. Jct. Other Companies
Cambrian Local S. Wales

4. Southern Group, and contains the following railways—

L. & S.W. L.B. & S.C. S.E. & C. I. of W.

Section 54 orders that each Company shall at each station keep available for public inspection a copy of the general classification of merchandise. These books are to be available during all reasonable hours without fee. Each company must also keep available for 10 years at its head office all documents specifying the rates and conditions in use on Jan. 14, 1920, and a sub-section requires the proportion of any rate appropriated to conveyance by sea to be stated. Part 4 deals with wages and conditions of service, Part 5 with Light Railways, and Part 6 includes sections dealing with facilities and the allocation of receipts of worked railways. Irish Railway Companies are required to furnish accounts and statistics as at present, until other provision is made by the Council of Ireland. Otherwise this Act does not apply to them.

RAILWAYS IN 1921.

Total capital expenditure was £1,161,300,000 in 1921, as compared with £1,155,900,000 in 1920 and £1,131,500,000 in 1913. On revenue account, gross receipts from the working of railways and other separate businesses were £236,000,000 in 1921 as compared with £257,800,000 in 1920 and £129,700,000 in 1913. Expenditure in 1921 was £245,500,000, against £251,800,000 in 1920 and £83,500,000 in 1913. But whereas in 1913 net

receipts were £46,200,000, in 1920 they were only £6,000,000, and in 1921 there was actually a loss on working of £9,500,000. Miscellaneous net receipts of £3,800,000 reduced this deficit in 1921 to £5,700,000. In 1920 miscellaneous net receipts were £4,200,000, bringing the net earnings up to £10,200,000, and in 1921 miscellaneous receipts of £3,600,000 brought the total net income up to £49,800,000. Government compensation of £41,000,000, which was added in 1920 to the net earnings, brought the total net income for 1921 to £51,200,000. In 1921 the Government compensation was £51,000,000. Adding to this the £4,400,000 representing proportion of amount receivable under Section 11 of the Railways Act, 1921, gives, after allowing for the deficit previously mentioned, a total net income for 1921 of £49,700,000.

Total passenger train receipts were £105,400,000 in 1921, as compared with £109,300,000 in 1920 and £54,500,000 in 1913. Comparing 1921 with 1920, the decreases were entirely in ordinary first and third-class passenger receipts. Goods train traffic receipts were £109,700,000 in 1921 compared with £126,900,000 in 1920 and £64,200,000 in 1913.

Expenditures show considerable variation as between 1920 and 1921. Thus, while maintenance and renewal of way and works increased from £33,400,000 in 1920 to £36,700,000 in 1921, maintenance and renewal of locomotives and rolling-stock from £45,900,000 to £49,300,000, and rates and taxes from £9,300,000 to £10,800,000, locomotive running expenses fell from £57,700,000 in 1920 to £52,500,000 in 1921, traffic expenses from £74,900,000 to £66,900,000, and compensation (accidents and losses) from £2,600,000 to £1,900,000.

Mileage of lines open for traffic, i.e., total single track, including sidings, was 51,315 in 1921, compared with 51,249 in 1920 and 50,425 in 1913. Total engine miles in the three years were, respectively, 463,930,000, 554,353,275 and 599,737,146. In 1921 "engine hours in traffic" were 54,579,000 compared with 69,585,285 in 1920; train miles per train hour were 13.24 coaching

and 8.81 goods in 1921, compared with 12.99 and 7.74 in 1920; and train miles per engine hour were 10.22 coaching and 3.41 freight in 1921, compared with 10.10 and 3.18 in 1920.

The number of wagon miles run in 1921 was 3,780,299,000, of which 2,620,100,000 (or 69.31 per cent.) were loaded. Corresponding figures for 1920 were 5,026,490,775, 3,541,525,757 and 70.46 per cent.

Passenger journeys, exclusive of season-ticket holders, were 1,717,687,000 in 1921 compared with 1,567,469,716 in 1920 and 1,184,195,402 in 1913. Tonnage of goods and minerals, which was 364,162,358 in 1913 was 317,849,926 in 1920 and 217,488,000 in 1921. The average receipt per passenger journey for ordinary passengers increased from 10d. in 1913 to 1s. 4.3d. in 1920 and 1s. 6.2d. in 1921. The average receipt per season ticket was in 1921 £12 12s. 8d., in 1920 £10 19s. 5d. and in 1913 £8 4s. 4d. Season-ticket holders (926,200) in 1921, while less than the 1,010,879 figure for 1920, show a decided advance in numbers over the 584,087 for 1913.

The number of ordinary tickets issued in 1921 showed a decline of 17.46 per cent., and was divided amongst several classes thus:—

	1921.	Decrease.
First-class.....	25,287,584	12,387,501
Second-class...	5,985,610	1,502,666
Third-class ...	911,147,813	185,437,343

Total 942,421,007 199,327,510

The number of workmen's tickets dropped by 33 per cent. to 309,635,379, and season tickets by 8.40 per cent. to 945,683. The decline in first-class season ticket holders was 17.17 per cent.

The average receipts per train mile increased as follows:—

	1920.	1921.
Passengers.....	120 02d.	124 14d.
Goods	209 86d.	239 37d.

The average receipt per route mile declined, however, from £4.791 in 1920 to £4.655 in 1921 in the case of passenger traffic, and £5.551 to £4.823 for goods traffic.

DAILY RATES OF PAY OF RAILWAY DRIVERS, FIREMEN & CLEANERS (In force from August 18, 1919).

Note 1. COMPENSATION PAYABLE TO RAILWAY COMPANIES.—The sum receivable per annum by the Railway Companies as compensation during the period of Government Control is limited to the Net Receipts of the year 1913 with the addition of 4 per cent. upon Capital Expenditure brought into use since the beginning of that year.

Note 2. *Arrears.*—The figures for the year ended March 31, 1920, are subject to audit, and as regards Government Traffic the rates at which the charges are to be raised are not finally agreed.

Note 3.—No sum has been allowed for any liabilities which may attach to the Government in respect of:—(a) Replacement of stock of stores and materials; (b) Abnormal wear and tear; (c) Arrears of maintenance other than permanent way and rolling stock.

Note 4.—Arrears of maintenance—permanent way and rolling stock—are estimated at 1913 cost of ascertained arrears plus 75 per cent. for additional cost of labour and material. The actual cost is not yet ascertainable, but payments have only been made on the basis of a 15 per cent. addition.

Note 5.—There is a debit amount of £447,680 balance of expenditure over revenue for the year ended March 31, 1920, on Pass Road Vehicles, Steamboats, Canals, Locks, Harbours and Wharves, Hotels, Refreshment Rooms and Cars, etc., thus reducing the net balance to £7,141,070. The Government Guarantee is:—

Standard year proportion of net Receipts	£47,440,000
Interest on capital works brought into use	1,052,600
Total Government Guarantee	£48,492,600
<i>Less</i> net Balance of Revenue over Expenditure	7,141,070
Net Government Liability for year ended March 31, 1920	£41,351,530

STATEMENT OF CAPITAL, REVENUE, WORKING EXPENSES, DIVIDENDS, LARGEST STATIONS, AND ROLLING STOCK OF THE PRINCIPAL RAILWAY COMPANIES OF THE UNITED KINGDOM FOR THE YEAR ENDED DECEMBER 31, 1921.

NOTE.—Yields are based on the approximate current price and to within a fraction of 1/16, and are calculated on the final dividend for July—December, 1921, and the interim dividend for 1922. † Ex dividend.

WEEKLY EARNINGS OF RAILWAY SERVANTS (Except Drivers, Firemen & Cleaners, see p. 893).

This shows the Pre-War Wage, the Present Wage, and the Minimum Wage. A wage higher than the Minimum Wage was guaranteed till Sept. 30th, 1920, after that date it was adjusted to Present Wage by arbitration based on the cost of living. The Minimum Wage (which took effect from Sept. 30, 1920) will not be reduced, however much the cost of living falls; the War Bonus also continues to be governed by the cost of living.

	Pre-War Wage.	Present Wage.	Minimum Wage.	War Bonus.
Porters	16s. to 22s.	47s. to 51s. 6d.	40s. to 46s.	5s. 6d. to 7s.
Parcel Porters	22s. to 30s.	52s. to 57s. 6d.	50s. to 56s.	1s. 6d. to 3s.
Ticket Collectors	21s. to 31s.	54s. to 58s.	54s. to 58s.	Nil
Passenger Guards	25s. to 35s.	52s. to 60s.	50s. to 65s.	(down to basic rate)
Goods Guards	25s. to 35s.	52s. to 60s.	50s. to 65s.	6d. to 2s.
Shunters	20s. to 31s.	51s. to 60s.	50s. to 65s.	6d. to 2s.
Goods Porters	20s. to 26s.	48s. to 52s.	40s. to 47s.	5s. 6d. to 8s.
Checkers	21s. to 31s.	53s. to 58s. 6d.	47s. to 57s.	1s. 6d. to 6s.
Carters	20s. to 29s.	51s. to 56s. 6d.	46s. to 53s.	3s. 6d. to 5s.
Platelayers	21s. to 24s.	49s. to 55s.	40s. to 50s.	5s. to 9s.

NOTE 1.—The lower rates apply chiefly in the country; the higher rates in industrial areas.

New Wage Scale for Lads on Railway. Under the provisional agreement (October, 1921) between the Railway Companies and the National Union of Railwaymen, raising from 18 to 20 years the age at which a youth is regarded as an adult, the scale of wages for the future will be:

Age 15 or under.....	16s.	On reaching age 18.....	30s.
On reaching age 16	20s.	" " 19	30s.
" " 17	25s.	" " 20	adult rate.

Youths in the service prior to this agreement, aged 18 or over, and receiving adult pay, will continue to be paid at the adult rate. The agreement does not apply to clerks, engine cleaners, youths employed in or about railway shops and hotels, and on steamers.

SIGNALMEN'S AGREEMENT. The agreed new standard rate of pay for each class is shown in the following table and is operative as from May 1, 1922:

Class	Average number of marks*	Standard rate per week.	Class.	Average number of marks*	Standard rate per week.
Special	375 and over	75s.	4	75 to 149	55s.
1	300 to 374	70s.	5	30 to 74	50s.
2	225 to 299	65s.	6	1 to 29	48s.
3	150 to 224	60s.			

* The whole of the signal boxes on the Railways are classified, the class into which each post is placed being determined by the system of marks representing work done, &c.

NOTABLE ACCIDENTS SINCE SEPTEMBER 1861 RESULTING IN LOSS OF LIFE.

Date.	Company.	Nature of Accident.	At	Number Killed.
Sept. 2, 1861	Hampstead J.	Collision bet. excursion and ballast train	Kentish Town	16
Oct. 13, 1862	N. British	Collision	Winchburg	15
Aug. 20, 1868	Lon. & N. W.	Irish mail in coll. with petroleum trucks	Abergele	33
June 20, 1870	Gt. Northern	Collision, excursion with goods	Newark	18
Sept. 10, 1874	Gt. Eastern	Collision, engine to engine	Thorpe	25
Dec. 24, 1874	Gt. Western	Broken tyre	Shipton	34
Aug. 7, 1876	Som. & Dor.	Collision	Radstock	15
Dec. 28, 1879	N. British	Train blown off the first Tay Bridge	Tay Bridge	73 brown
July 16, 1884	M. S. & L.	Crank axle broke	Penistone	24
Sept. 16, 1887	M. S. & L.	Express ran into race train	Hexthorpe	25
June 12, 1889	G. N. Ireland	Train divided, ran back	Armagh	80
July 27, 1903	Glas. & S. W.	Train ran into buffer stops	Chasgow	15
July 10, 1905	Lanc. & York.	Collision between two electric trains	Hall's Road	20
July 1, 1906	Lon. & S. W.	Derailment in consequence of excessive speed around curve	Salisbury	28
Dec. 28, 1906	N. B. & Cal.	Rear collision	Elliot Junction	22
Oct. 15, 1907	Lon. & N. W.	Derailment on curve at speed	Shrewsbury	18
Sept. 17, 1912	Lon. & N. W.	Derailment (high speed) through crossover	Bitton Junction	16
Sept. 2, 1913	Midland	Rear collision, non-observance of signals	Aisgill	16
Jan. 1, 1915	G. E. R.	Signals overrun	Tilford	10
May 22, 1915	Caledonian	Coll., two pass. trains and troop special	Greta	227*
Aug. 14, 1915	Lon. & N. W.	Irish mail train derailed owing to displacement of coupling-rod on engine of passing express from Birmingham	Weldon	8
Dec. 18, 1915	N. Eastern	Double collision; fire	Jarrow	17
Dec. 19, 1916	L. & N. W.	Collision with shunting train	Wigan	2
Dec. 19, 1916	G. S. & W.	Collision	Kiltimagh	5
Jan. 3, 1917	N. B.	Collision, express and light engine	Ratho	12
Sept. 15, 1917	Military	Derailment	Yorkshire	4
Jan. 19, 1918	Midland	Landslide	Little Salkeld	6
July 17, 1920	L. & Y.	Collision, passing signals	Loxton Junction	4
Jan. 26, 1921	Can.	Head-on collision, single line	Newtown-Abermule	17
July 8, 1921	East London	Goods and pass. trains in collision	Wapping station	2
Nov. 11, 1921	L. & N. W.	Loco. boiler explosion	Buxton	2
Nov. 26, 1921	Midland	Rear collision	Birmingham (N. St.)	3
Aug. 21, 1921	S. E. & C.	Workman's train over-ran platform; workmen alighting on line caught by light engine, and stationary train ran into by another workman's train.	Milton Range Halt	5

* Including 3 Officers and 215 other ranks.

THE RAILWAY CLEARING HOUSE.

This Institution was opened in Jan. 1842, and in addition to the work of clearing through bookings of passenger and luggage traffic, is the medium through which agreements relating to rates and fares, &c., are arrived at. *Chairman*, E. R. Turton, M.P.; *Secretary*, P. H. Price, O.B.E.; *Offices*, Seymour Street, N.W.

IRISH RAILWAY CLEARING HOUSE.

The Irish Railway Clearing House occupies much the same position to the railway system of Ireland as the (London) Clearing House does to the railways of Great Britain. It was established July 1, 1848. *Chairman*, Sir William J. Goulding, Bart.; *Secretary*, Peter J. Brennan; *Offices*, 5 Kildare Street, Dublin.

Indian Railways.

THE construction of Railways in India commenced in 1853, and the total length open at the close of the year 1921 was 37,029 miles. They have in their service about 630,000 employees of whom 7,000 are Europeans, 10,000 Anglo-Indians, and 613,000 Indians. The following are the principal Officials of the Government of India Railway Department:—

Government of India Railway Department
(Railway Board).

Chief Commissioner, C. D. M. Hindley.

Members, Col. W. D. Waghorn, C.B., C.M.G.; E. A. Bell, C.I.E.

Government Director, G. Deuchars.

Secretary, R. McLean, B.Sc.

Chief Engineer, G. Richards, B.A., F.C.H.

* Address—India Office, Whitehall, S.W. 1. All others at Simla, India.

India Office Railway Department.
Whitehall, London, S.W. 1.

Secretary, W. Stantiall.

Government Director, G. Deuchars.

Con. Engrs., Messrs. Rendel, Palmer & Tritton.

The financial results of the working of all Indian Railways during the year were affected by the abnormal advance in expenses which advanced from 56·81 to 65·54 per cent to gross earnings and yielded a percentage of 5·06 on total

capital outlay compared with 6·80 in previous year. Reviewing the India State Railways separately the gross earnings were Rs. 80,99,06,054 compared with Rs. 79,09,95,000 for the previous year, but working expenses advanced from Rs. 45,46,75,000 to Rs. 54,52,95,675 and net receipts fell from Rs. 33,62,20,000 to Rs. 26,46,10,379 yielding a return of 4·72 per cent on capital expenditure. The State-owned Railways continue to be a most valuable asset returning a net gain of 4·78 crores (Rs. 4,78,00,000). Third-class passengers, of which 490,280,400 travelled, considerably outnumbered all the rest put together, as was only to be expected; but there are some interesting facts in respect of the higher classes. In 1916-17 the number of passengers travelling by intermediate class was 14,348,800, which in 1920-21 had fallen to 11,749,600. The corresponding figures of first and second classes show that this was due to the better class Indian having transferred his patronage to the higher classes as providing greater comfort and privacy. The average rates charged per passenger per mile were (in pies), first-class, 16·72; second, 7·84; intermediate, 4·36; third, 2·92; season tickets, 1·60; making an all round average of 3·18 pies for all classes. The table on previous page gives operating figures for all Indian Railways.

THE GOVERNMENT AND EXPORT TRADE.

Contributed by SIR W. JOYNSON-HICKS, Bart, M.P., Secretary, Department of Overseas Trade—Development and Intelligence. (Joint Department of the Foreign Office and the Board of Trade), 38, Old Queen Street, S.W.1.

THERE is, of course, nothing novel in the fact that the Government assists in the progress of British over-seas trade. Indeed, so familiar have many of the forms of assistance become that they are apt to be overlooked when the question of Government assistance is under discussion. International commercial treaties, the safeguarding of sanctity of contracts, tariff questions, the maintenance of communications—these, and many others, are forms of assistance and protection which have for long been undertaken by the British Government and by the Governments of other commercial nations, and without which over-seas trade would be a hazardous and difficult undertaking.

There are, however, many other directions in which a Government can support and foster the export trade of its country. Up to a few years ago Germany and, to a somewhat lesser extent, the U.S.A. were the two countries of which the respective Governments had gone furthest in their endeavours to extend their organisation for rendering commercial assistance, and British traders were not slow to point to these examples, and to draw comparisons between the activities of these Governments and their own.

A very satisfactory change has, however, taken place during the past few years, and from being laggards in the race, the British Government has moved up into the front rank. So pronounced, indeed, has been the progress made in building up an organisation for fostering and assisting in the development of British over-seas trade, that the Governments of other countries have recently been closely and openly studying our organisation with a view to developing their own upon similar lines.

Undoubtedly the War, and the trading difficulties which it brought in its train, were largely responsible for bringing about a realisation that greater assistance to exporters was an urgent necessity, and, starting with the Commercial Intelligence Branch of the Board of Trade as a nucleus, a far-reaching commercial intelligence system has been built up, having as its headquarters the Department of Overseas Trade (Development and Intelligence), Old Queen Street, Westminster.

The work of this organisation divides itself under the following main heads, viz., securing commercial information from all parts of the world; disseminating this information to British manufacturers and exporters; undertaking such special constructive activities as may be found possible; and assisting traders in the removal of difficulties which from time to time arise.

To carry out the first of these functions a widespread and efficient over-seas intelligence system is necessary. This has been attained by means of the Trade Commissioner Service in countries of the Empire and the Commercial Diplomatic and Consular Services in foreign countries. The first two Services are entirely concerned with commercial matters. Consular officers have many and varied functions, but under the aegis of the Department of Overseas Trade, which now directs their activities, a much greater amount of time is devoted to commercial matters than was formerly the case.

These services form a network of commercial intelligence officers covering every important market in the world. From them the Department is in constant receipt of a steady flow of valuable trade information which it brings to the attention of such portions of the British commercial community as are likely to be interested.

It is, perhaps, unnecessary to go into details as to the methods by which this is done, but a brief outline may be of interest. The Headquarters staff comprises a number of officers who have had actual business experience either in the countries, or of the trades, with which they are now dealing. By co-operation between these officers, viewing the information, the one in the light of his over-seas experience, and the other his experience in the trade in this country, the value of the information to British traders is assessed, and the best method for dissemination decided.

The information may then be issued in a number of ways, the chief media being circular letters, which are issued to all British firms likely to be interested, the trade press, the "Board of Trade Journal," Chambers of Commerce Journals, etc.

The following few examples will give some idea of the nature of the information daily being received: notifications of foreign or colonial contracts open, or likely to be open, for tender, and other openings for British trade; existing and probable future demand for specific lines of British goods; the extent and nature of competition and the best methods for meeting it; usual methods of business, terms of credits, payment, etc.; Customs regulations and tariffs; regulations covering commercial travellers, certificates of origin, etc.; sources of supply and prices of trade products, etc.

In addition to supplying such information, the Department is in a position to supply information on all commercial questions in response to direct enquiries. The Department has frequently been able to solve difficulties which may have arisen in connection with contracts, and to enable traders to effect satisfactory settlements.

Further, at the request of British firms or Associations the Department undertakes special enquiries entailing extra financial outlay, with no charge other than the refunding by the firm or association of the additional expense incurred.

The Department further assists trade by placing British exporters in touch with firms or individuals in overseas markets who are considered suitable to act as agents or representatives, and advising the British firm as to the agency conditions usual in the country in question, or, in the case of an exporter desiring to introduce his goods into a given market, by supplying names of likely importers.

The difficulties caused by abnormal rates of exchange, and the financial situation in a number of European countries, led to the institution of the Export Credits Scheme, which is administered by the Department of Overseas Trade. With financial conditions still unsettled, and in view of the use made of the scheme by exporters, it has been decided to extend the period within which credits may be granted for a further twelve months to 8th September, 1923. The date for final liquidation of advances remains unaltered, viz., 8th September, 1927.

For a trader successfully to compete in an overseas market it is a necessity that he should have actual knowledge of the kind of goods with which his own must compete. To meet this requirement, the Department has formed an extensive collection of samples of foreign competitive goods and commercial products. These samples are exhibited to, and inspected by, British manufacturers, who thus gain a first-hand and valuable insight into the nature of the competition which they must expect to meet.

The Department is kept closely in touch with the requirements of the commercial community, and its activities are directed, upon those lines considered by business men to be most useful, by its Advisory Committee of business men. All the members of this Committee are men with very wide experience, ranging over almost all our industries and the countries with which we trade, and are thus well qualified to assist the Department in its endeavours to meet the needs of British traders.

The Department further works in close co-operation with Chambers of Commerce, Trade Associations and other representative bodies. There is thus obtained not only a common effort to avoid overlapping and duplication of work, but also a further guidance towards the most effective and useful activities.

A form of co-operation which has borne many good results is the visiting of industrial centres in this country by Trade Commissioners or Commercial Diplomatic Officers home on leave, or special duty. In the main, Chambers of Commerce or Trade Associations are visited, and members of these are thus enabled to obtain at first-hand valuable information concerning conditions in various overseas markets, while at the same time the officer himself refreshes his knowledge concerning home conditions and is so much the better able efficiently to perform his duties on his return. Not only are representative bodies visited, but also individual firms who are particularly interested.

The outcome of this co-operation has been measured already in the success which has attended investigations undertaken by the Department, either on its own initiative or at the request of some such body as the above, in which the Department and the Association have worked in conjunction.

A number of other similar functions are performed by the Department, but the above will serve to indicate the nature and extent of the assistance which it extends to British manufacturers and merchants.

W. Loejerson Hick.

BRITISH SHIPOWNING.

By J. T. FINDLAY, Editor of "The Shipping World."

THE year 1922 was one of almost unrelieved gloom for British shipowners; and it is not much comfort to know that they were not alone in feeling the depression, which in duration, extent and seriousness has been without parallel in the annals of the industry. Throughout the past year shipping everywhere was adversely affected by world-wide political and economic disturbances, by violent fluctuations of the exchanges, by the continued high costs of production and heavy running charges, and, above all, by the meagre output of the world's essential supplies and the inability of consumers to pay what producers were obliged to ask for their goods. Fortunately, these things are all in the course of being put right. The political outlook is still in a highly unsettled state, and economic stability, which is so essential to the welfare of the shipping industry, can only be attained when the statesmen of Europe are agreed. Running costs and costs of production are gradually falling, but the fact that they are not yet stabilised in many industries is delaying the placing of orders for new tonnage and the revival of business generally. Output is improving slowly, but demand must increase with it before normal conditions return. Obviously demand can neither be constant nor general so long as currency questions and the variations in exchange are left unsolved.

In the shipping trade the index of its prosperity or otherwise is the freight market; and throughout 1922 the market pursued a somewhat cheerless and uneventful course. The tendency in freights has been, on the whole, downwards, and the extent to which quotations have shrunk may be gauged from the calculation recently made that they represent only about one-fifth of what they were in 1920. Although it may be true that freight rates were not much lower last year than what they were in 1921, this did not denote steadiness in fixtures, but rather that bedrock in prices had been reached, and a further fall would simply have meant that nothing could be transported at sea except at a loss to the carrier. The low levels reached by freights in 1922 betrayed the fact that there were still too many ships afloat for the limited cargoes on offer.

There were, of course, bright, if brief, interludes in the shipowner's business during the year. No such industrial struggle of the magnitude of the miners' stoppage marred the course of 1922, but Labour conflicts abroad materially assisted the coal export markets of the Kingdom, and from July to September shipments to the United States and Canada gave a much-needed fillip to shipping business. Full outward coal cargoes in their turn benefited the homeward

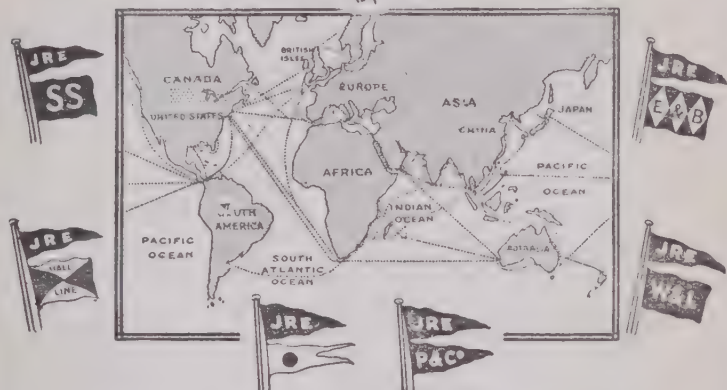

grain trade, and for months on end shipowners were able to charter their boats at figures to which they had been strangers for some time. The Baltic and St. Lawrence trades are purely seasonal, but may always be depended upon to employ a certain amount of tonnage; while the Plate grain business, although subject to fluctuations both in the quantity of grain shipped and in its market rates, can also utilise a considerable fleet of boats. This past year Scandinavia, Holland and Germany have been active importers of British coal. The Black Sea provides another outlet for shipping, although the Roumanian Government for political reasons has taken measures to discourage exportation of its grain. Yet even with such aids British tonnage laid up for lack of employment amounted in mid-summer to no less than 10 per cent. of British-owned ships afloat, or to about 2,500,000 tons d.w. carrying capacity. A considerable proportion of that tonnage is obsolete or at least out of date; 8 per cent. of British tonnage to-day is 25 years old or more; and when such vessels are scrapped, as they are certain to be ere long, the residue may not appear so formidable.

During the year there was some decrease in passenger rates in sympathy with the fall in freights, and partly induced by this and partly owing to somewhat more settled conditions, there was a notable expansion in cabin passenger traffic, particularly between Europe and North America. The invasion of Europe by Americans in mid-summer did not fail to benefit the great shipping companies, but, on the other hand, the purely seasonal aspect of this business is seen in the fact that many of the great liners have been taken off their regular routes this winter in order to cater for passengers prepared to spend time and money for selected holiday cruises in the southern seas. Moreover, the new United States Immigration Law restricts very largely the flow of emigrant traffic westward, and, generally speaking, the tide of emigration did not run very strongly during the year in any direction.

Conditions being what they were, there was little or no inducement for British shipowners to order new tonnage, and the shipyards have been passing through an exceedingly lean period. The market for second-hand tonnage has also been very stiff, the only buyers on a relatively large scale being German. Boats originally built in Germany and handed over to Great Britain under the reparations scheme have been bought back by their original owners, either for the purpose of breaking up for the sake of their metal scrap and fittings, or with the idea of restarting the services in which they first ran. German shipping competition is again a factor to be considered, and is being watched by British shipowners with far greater attention than the spasmodic activities of the United States Shipping Board.

ELLERMAN LINES LIMITED

Controlled by Sir John R. Ellerman, Bart.

THE carrying capacity of the Steamers owned and controlled by Sir John Ellerman, Bart., throughout the world, is now over 1,350,000 tons deadweight, and additional steamers, with an approximate capacity of 200,000 tons, are in course of construction. Powerful and Luxurious Passenger Steamers to suit the various trades are a special feature.

The following are the principal Lines, known collectively as the Ellerman Lines Ltd.) and their trade routes:—

ELLERMAN'S CITY & HALL LINES

U.K. to and from India, South Africa, East Africa, etc.

ELLERMAN & BUCKNALL S.S. CO., Ltd.

U.K. Canada and U.S.A. to and from South Africa, India, Straits, China, Japan, Australia, Pacific Coast, etc. U.K. to Persian Gulf.

ELLERMAN & PAPAYANNI LINES.

U.K. to and from Portugal, Italy, Levant, Egypt and Black Sea.

WESTCOTT & LAURANCE LINE.

U.K. to and from Gibraltar, Malta, Egypt, Levant and Black Sea.

ELLERMAN'S WILSON LINE.

U.K. to and from France, Scandinavia, Baltic, Mediterranean, India, U.S.A. and Australia.

Principal Offices:

LONDON, LIVERPOOL, HULL, GLASGOW, MANCHESTER.

Agencies throughout the World.

BRITISH SHIP-REPAIRING.

By JOSEPH L. CAROZZI, Editor of "Syren and Shipping."

THE year 1922, from the British ship-repairers' point of view, has not been a very successful one. In the first place, a considerable amount of tonnage has been laid up, and thus overhauls which, in normal times, would have been carried out have been postponed. Shipowners, too, have, in many cases, decided that in view of the depression in the freight markets, it was more economical with regard to ships upon which repairs were due, to withdraw them from active service and lay them up until the advent of better times. In addition to this adverse factor, the beginning of the year saw a large number of British ships being repaired at Continental yards. The reason for this was, first, the high price of material and labour, and secondly, the unsettled condition of the industry, which prevented firms from giving any definite assurance as to the date when a job entrusted to them would be completed. Shipowners, especially at a time like the present, cannot afford to have valuable shipping property lying idle in the repairers' hands for a day longer than is absolutely necessary. Under these circumstances, therefore, it was quite understandable that work which should have been carried out at British dry docks and fitting-out berths should have found its way abroad. Happily, as the year advanced, the position improved. The amount of tonnage laid up was reduced; a cut in wages was agreed upon, and generally the ship-repairing industry became more stabilised. To these beneficial influences there must be added another factor which made for the betterment of the business. This was the increase in cost of labour and materials on the Continent, which enabled British ship-repairers to meet their Continental competitor on more even terms. Thus the disquieting procession of British ships proceeding to Hamburg, Rotterdam, and other Continental ports for repairs was arrested, and so far as the outlook at the close of the year is a guide, this is not likely to be repeated during 1923—provided, of course, that no untoward labour disputes again eventuate to interfere with the conduct of the ship-repairing industry. It is interesting to note that the improvement which set in during the opening months of 1922 made itself first felt at the north-east coast establishments, and it was not until considerably later that the Bristol Channel repairing firms made any marked progress towards a resumption of their normal activities. Perhaps the explanation of this is the loyal co-operation which

in many cases existed on the north-east coast between employers and employed, the men recognising that it was only by reducing costs and increasing output that orders could be secured. In this connection, the ship-repairing establishments of Smith's Dock Company, North and South Shields, and Messrs. Henry Robb, Ltd., of Leith, may be indicated as happy examples of this spirit of co-operation. During the year a considerable amount of work has been done in converting coal-burning steamers for the use of liquid fuel; but routine repair work, such as is necessary when a vessel comes up for re-survey, has been much below the average. At the same time, there have been executed during the year some jobs of quite outstanding importance. Amongst those is that of the Cunard liner *Mauveletania* (30,703 tons). In addition to considerable work being done to the ship's passenger quarters, she was also adapted for oil burning. The work was carried out on the Tyne, and the result achieved was that the ship was enabled to maintain the high speed records which she established during the early days of her career. Another very important work which was performed on the Tyne was the reconditioning and conversion of the *Berengaria* (52,022 tons). This vessel, as the *Imperator*, was a coal burner, and the magnitude of the work attaching to the conversion may be judged from the fact that coal bunkers had to be removed, tanks of 6,200 tons capacity provided for the carriage of liquid fuel, and all the necessary furnace and boiler alterations made. The job absorbed about 1,000 tons of structural steel and other materials, and resulted in an increased speed which can be easily maintained throughout the whole of her voyages. Her passenger accommodation, too, was thoroughly overhauled. Another big reconditioning job was that of the White Star-Dominion liner *Regina* (16,143 tons). This vessel was built by Messrs. Harland and Wolff, of Belfast, and when war broke out the work on her was suspended. In 1918, however, when tonnage was urgently wanted, she was got ready for sea as a cargo carrier. She was also employed as a troopship, and then returned to Belfast to be reconditioned and fitted for her passenger work. The facilities provided for ship repair work in the Port of London have been greatly increased during the year, Messrs. Harland and Wolff having arranged to carry out general repair work as at Belfast, Liverpool and Southampton.

IT is surprising that the industrial potentialities of asbestos, the mineral fibrous substance whose name is derived from its distinguishing properties, were neglected and apparently unperceived till about fifty years ago, although the substance itself was known and put to certain uses in ancient times. Not to go farther back, it is referred to by Pliny, who wrongly places it in the vegetable kingdom—a mistake not difficult to understand, for the fibres of crude asbestos—fine, silky hairs—become on slight pressure a soft, woolly stuff almost exactly like unspun cotton. Asbestos was occasionally woven into handkerchiefs, and, there is some reason for asserting, into shrouds, which were used at Eastern cremations to prevent the ashes of the corpse from mingling with the ashes of the funeral pyre. Charlemagne is said to have possessed an asbestos table-cloth which, when soiled, was cleansed by being thrown into the fire. In 1676 a trader from China exhibited to the members of the Royal Society a smaller fabric made of what was described as “salamander’s wool”—*linum asbesti*. When the Eskimos of Labrador first came under observation it was found that they used the material for lamp-wicks, and it served a similar use in some of the sacred lamps of olden temples.

The raw material is widely distributed, but only in a few areas are the deposits sufficient in extent, and pure enough in character, to be worked on a commercial basis. There are, for example, limited quantities of it in Tyrol, Hungary, Queensland, New South Wales, and New Zealand; it is not unknown in the British Isles, being found among old rocks in North Wales and in parts of Ireland. It also occurs in several parts of the United States. Mountains in Griqualand West, Cape Colony, yield a blue fibrous mineral worked under the name of Cape asbestos. Supplies were formerly obtained almost exclusively from Italy and Corsica, and the output from Italian workings—mostly an amphibole—is still considerable; but of recent years our most important supplies have been drawn from Canada, where, in the province of Quebec, a belt of a fibrous variety of serpentine was first appreciated as a commercial asset about 1877. In different varieties of asbestos there are many dissimilarities in the character of the fibres, those of the serpentine order never exceeding two or three inches in length, but being of great tensile capacity. The bulk of asbestos on the market to-day is of this serpentine description. Large working deposits exist in West Siberia, and during the last five years Rhodesia has produced large quantities of good white fibre.

The economic value of the material is not confined to its incombustibility, but extends to its low thermal conductivity and its powers of resistance to the attacks of acid—qualities which multiply its uses, among the first of which were

the jacketing of boilers and steam pipes, the packing of joints, glands and stopcocks, and the filtering of corrosive fluids. It has come into employment as an electric insulator, and even clothing for firemen has been made from it. By itself or in combination, in a number of miscellaneous forms as well as those of yarn, felt and millboard, it is without any possible substitute of equal efficiency and serves many purposes for which nothing else is available. As a boiler covering it has been demonstrated that for every thousand square feet of surface fully protected by an asbestos composition a saving is ensured of about two hundred tons of coal yearly.

On the short history of the asbestos trade in Great Britain the passing of Mr. Lloyd George’s Patents Act in 1907 has a direct and important bearing, for it was the first to benefit under that Act. The Austrian patentee of a process for the manufacture of asbestos cement tiles and sheets had obtained the protection of patent rights in this country, but, refrained from manufacturing here the articles which that protection prevented us from making ourselves—abusing, to the advantage of foreigners, the rights he had acquired from us, and turning their possession into a means for the continuance of a Continental monopoly. The revocation of his British patents cleared the way for the home production of the commodities they had covered, with the immediate result of the establishment of a new British industry. A material composed of London Portland Cement reinforced with pure asbestos fibre of selected grades, from which are made tiles and sheets for constructional purposes, was soon on the market, and both of its converted forms have proved themselves superior to any competitive products of Germany and other countries. The range of their employment is an extensive and widening one and they promise to be to the builder what asbestos in other adaptations has for half a century been to the engineer. Where an artistic effect is desired—for country houses and other buildings amid beautiful scenic surroundings—Paniles of this material, coloured russet brown, are available. They are not only fireproof and waterproof but immune from the effects of atmospheric changes, and it is claimed for them that they improve with the lapse of time.

It is appropriate to mention another fireproof and damp-proof composition which owes its distinctive utilitarian, as apart from its ornamental and artistic, characteristics to the presence of a large percentage of asbestos. The reference is to a new flooring material, for use in residences, halls, schools, theatres, factories, hospitals, and other public buildings; in railway carriages and on shipboard for saloons and cabins.

The progress of the industry under review has been a rapid one, but, serving as it does so many interests, its success is on a stable and durable foundation.

Asbestos & The Empire

*How a geological curiosity
became a building and
engineering asset.*

Until 50 years ago, the fibrous variety of hornblende known as "Mineral Wool" or Asbestos had no commercial use except in gas stoves. The company with which Mr. John Bell was originally associated, and its successors up to the present day, have made Asbestos an Imperial asset. Mr. John Bell was one of the first to show that Asbestos could be spun, like a textile. On this discovery and the other developments which followed was built the great Asbestos Industry.

THE BOILER INDUSTRY.

SINCE the early days of steam (which Emerson said might almost be termed an Englishman) Great Britain has annually exported a considerable number of boilers, in itself a proof that her practice and prices have been satisfactory. This is a state of affairs which must be maintained, and a short survey of the present organisation, conditions and practice of the industry may be useful in assessing future prospects.

The boiler industry is carried on, broadly speaking, through two systems of organisation. The first is that in which boilers are not the sole product of the manufacturing firm, but are made as an item in a complete unit; thus nearly all the large shipbuilding yards have boiler shops of their own, railway companies generally produce the boilers for their locomotives, as also do makers of agricultural engines, road-rollers, and the like. This system shows signs of being displaced by the second one in which a firm manufactures boilers and nothing else—in other words, by the modern system of specialisation. A tendency of this kind is all to the good. Modern boiler-makers use a much larger proportion of heavy plant than their predecessors, such as hydraulic flanging presses, multiple drills, hydraulic riveters, and it is only a firm able to keep such machines busy by a large turnover that can produce good boilers at a reasonable price. The use of powerful and efficient plant naturally results in a better article with lower manufacturing costs than older methods could, as these involve so much hand work. This is true of most trades, but applies with special force in boiler-making, where, for instance, the use of a flanging press avoids the frequent reheating of heavy plates, which is necessary with hand flanging. But this specialisation goes further. Boiler-makers nowadays do not make *all* types of boiler; as a matter of fact, most of the firms of the front rank confine themselves to the manufacture of one or at most two types. Thus the makers of water-tube boilers (in which the fire is *outside* the water and needs a firebrick-lined casing to contain it and form the furnace) are almost a race apart from the makers of fire-tube boilers (in which the fire is contained *inside* the water-holding structure). The latter class, again, handle only, say, "Scotch" or "Lancashire," "Yorkshire," "Cornish" or "Locomotive" boilers, which are all horizontal, or else one of the vertical types. These last, apart from the common "Cross-tube" boiler, are generally patented patterns, and further illustrate specialisation. The natural result of specialisation is standardisation, which again helps to make possible a better article at a moderate price. Most of the firms which have adopted the one have adopted the other, greatly to the benefit of the buyer, as he can select a firm whose range of standard sizes, singly or in groups, covers his requirements with, very often, a possibility of getting what he wants from stock. It may be noted here that specialisation does not mean monopoly; there is sufficient competition amongst boiler-makers to keep the trade healthy, whilst there is generally a refreshing absence of "rings" or combinations.

The best modern practice, it may be noted for the benefit of the non-technical buyer, requires all the rivet holes to be drilled in place, not punched; all plate edges to be planed or sawn to shape, not sheared; riveting to be done by

hydraulic machine wherever possible, and caulking with pneumatic tool. In design development is taking place in the direction of reduction of stays (or gussets), which often make a too rigid structure and interfere with proper cleaning, their absence being compensated for by pressing the plates affected into stronger forms. Steel is now almost invariably used, except sometimes for tubes, and the employment of steel of very high tensile strength is becoming more frequent where weight is a prime consideration, e.g. in Naval work. Welding by the oxy-acetylene flame or by electricity in place of riveting seams is making headway. There is also a tendency to build boilers for higher pressures than formerly.

More scientific design has resulted in economy of material, and standardisation in economy of time and labour. Economy in performance is now being carefully studied. The present high cost of steam coal involves the use of inferior fuels, which to be consumed effectively require special forms of grate. These are being developed, and material formerly classed as waste can quite easily be burned on them. The superheater is being further developed also in the direction of economy. Though the use of heavy oil as fuel is not at present a commercial proposition in Great Britain, owing to its high cost, it has great advantages, and many boiler-makers have studied the subject sufficiently well to be able to modify their designs so as to burn it effectively.

A welcome note in progress was sounded in the autumn of 1919 by the publication of a uniform set of rules for boiler construction. This is the production of the big Marine Surveys, viz. Board of Trade, Lloyd's, British Corporation and Bureau Veritas. It will further simplify and standardise business, and possibly lead to regulations for land boilers, for nothing of the kind exists in Great Britain. The intending buyer of a land boiler, then, is well advised to enquire to what rules his boiler will be constructed.

The future of the industry is not so gloomy as some prophets predict. It is quite true that the Diesel engine is apparently driving steam boilers out of large ships—the main boilers, that is—for even on Diesel-engined vessels it is found necessary to carry an auxiliary (or donkey) boiler to provide the motive power for such machinery as winches and steering-gear and heat for various purposes. It is further possible that the use of the large internal-combustion engine may become more general on land in such places as the power house, and that water power and tidal action may be more utilised; but there is scarcely an industry which does not make use of steam for other purposes than power, and new processes and extensions are occurring from day to day. The utilisation of waste heat from steel-heating furnaces by means of boilers is an illustration. The steam boiler and engine still remain the best independent source of power, and it is this very independence which makes a steam installation the most reliable and flexible power producer in isolated situations and developing countries.

There will be numbers of oil-fired steam boilers in Mesopotamia and South America in the future, wood-fired in Siberia and Canada, to suggest only a few possibilities, and, as British boilers are undoubtedly the best, the larger portion of them will be British.

VALVE INDUSTRY.

THE MANUFACTURE OF BOILER MOUNTINGS AND VALVES.

BY GEORGE F. ANDERSON, A.M.I.M. ch.E.

IN the engineering field of activity few industries have provided greater interest in their development than that which is concerned with the manufacture of boiler mountings and valves. This interest is due largely to the almost universal application of steam boilers and power plants, as well as to increasing recognition of the fact that high-class valves and fittings are first essentials to efficiency in the boiler or power house.

Whilst the lower steam pressures and temperatures of early days did not seriously test the comparatively simple designs and ordinary materials then used in the construction of boiler mountings and valves, it is true that modern high pressures and superheats have necessitated the introduction of vastly superior designs providing for greatly increased strengths and involving the application of special heat- and pressure-resisting materials.

Thus in every phase of industrial activity it has become imperative, in the interests of efficiency and safety, that steam appliances shall be of the most scientific design and produced with the highest degree of manufacturing skill.

The importance of the valve industry in its relation to other leading industries may be gauged by an appreciation of the great variety and vital functioning duties of such indispensable appliances as boiler safety valves, steam stop valves, pressure and vacuum gauges, boiler feed, check and blow-off valves, water gauges, reducing valves, expansion joints, steam driers, steam traps, auto exhaust valves, as well as numerous cocks, valves and fittings in brass, bronze and steel. These fittings are needed in thousands to equip the world's boilers, engines, turbines, steamships, locomotives, etc., where absolute safety and reliability are foremost essentials, and where even the smallest risk is not to be entertained.

Fortunately, the exacting requirements of modern services have been more than fully met by the valve and boiler mounting specialists of leading British makers, and there are probably few industries where British reputation for quality has been more greatly enhanced than in the making of high-class boiler mountings and valves.

With the introduction of high pressures and superheated steam it has become necessary to pay great heed to the metallurgy of the different metals used in valve construction, and particular attention must now be given to the selection and alloying of metals owing to its pronounced influence on their mechanical properties.

It has thus been established by careful research and tests made by one enterprising British concern that many valve failures have been caused by the use of cast iron for high pressure and superheated steam services. These tests have amply proved that when cast iron is subjected to high temperature it develops cracks and "grows," causing molecular changes, since the material has no defined modulus of elasticity. There is also chemical action which disintegrates and weakens it to such an extent that it finally breaks away. An examination of photomicrographs of cast iron taken before and after use with superheated steam at about 500° F. clearly shows dark areas which represent the distribution of graphite strips throughout the iron. Superheated steam penetrates cast iron along the graphite plates on strips which form its weakest constituent; and as these have a different coefficient of expansion from the iron, they are deformed and ultimately broken up by the pressure to which they are subjected. Whilst this molecular deformation is clearly marked in the case of cast iron, there is hardly any change in the crystal structure of cast steel subjected to exactly the same tests. This is due to the fact that two of its constituents—ferrite and pearlite—are nearly the same in coefficient of expansion, and as both are mechanically strong they do not undergo any appreciable chemical or structural alteration after prolonged contact with superheated steam. Hence for high steam pressures and superheats only the best mild cast steel should be used for valve bodies and covers.

An important feature affecting the reliable working of valves used for superheated steam is the material

employed for making the inner valves and seats. The softening and gradual deterioration under high temperatures, also the warping and erosion of valve seats, where gunmetal was used, has now been obviated by the introduction of a special metal which, in addition to being non-corrodible and able to resist the action of acids and alkaline waters, will withstand the highest temperatures without deterioration, and is five times harder than bronze.

In this way scientific progress and manufacturing enterprise have placed within the reach of every discriminating user of steam valves and boiler mountings British manufactures which throughout the world are unsurpassed for quality and reliability. These fittings contain every possible constructional improvement and safety device which experience deems essential for the protection and safety of the user.

Fortunately the days are almost past when purchasers of steam boilers are content to leave the equipment of the vital boiler mountings and valves to the maker or supplier of their boiler. This is largely due to a fuller realisation of the great disadvantages and positive danger attending the use of cheap and inferior mountings collected from miscellaneous sources. Many steam users who formerly accepted boilers equipped with mountings of either foreign or cheap "quantity" manufacture, on the ground that keen competition precluded the boiler maker from supplying best quality mountings, will now insist on mountings of specialised make and value.

It cannot be denied, however, that too frequently the choice of valves and mountings for what are often costly and first-class power plants, is made solely on the question of "lowest price" without giving any consideration to quality, safety, or ultimate reliability. In these cases it is not surprising when serious trouble occurs, often causing expensive and serious stoppages to a complete works, or maybe a large power and lighting installation, and with it, perhaps, many works. It is often only necessary for a single experience of this sort to prove the truth of the fact that, where vital fittings are concerned, cheapness in the first instance spells dearthness in the long run. Though not fully appreciated by many, the questions of first cost and efficient design are by no means the chief advantages of using "quality" appliances. Considering the liabilities now imposed upon steam users in case of accidents, which in some instances are fatal, it is permissible to mention that what is known as "factor of safety" in matters of design is often by certain makers kept as low as possible on the ground of cheapness, but valve users should remember that low factor of safety means higher factor of risk. This is why the engineer and user who know the difference will always insist that it is positive economy to buy only the best designs and manufactures obtainable.

Where the steam user is purchasing plant through a consulting engineer or overhead supplier, it is advisable to specify clearly the makers of the boiler mountings and valves required. Modern specialisation in quality manufacture has placed within the reach of every steam user, standard sets of boiler mountings which are supplied to definite specification.

In addition to the boiler mountings referred to, this industry covers the manufacture of all classes of main stop valves, reducing valves, expansion joints, steam driers and traps, exhaust valves and general steam and water cocks and fittings. All products are made to gauges by specially designed machinery, and are subjected to frequent severe tests and inspection at all stages during manufacture. As pressure specialties they are thoroughly tested under pressure, either by hydraulic test or, if required, steam pressures up to as high as 750 lbs. per square inch, and with superheat as much as 1000° F.

Summarising then, the efficiency of a valve depends on design, materials, workmanship and tests—all factors which cannot be trifled with.

But as long as there are British manufacturers to set up and maintain a standard of quality and safety, so long will Britain lead the way as the premier valve-making country in the world.

HOPKINSON'S

PATENT SAFETY

BOILER MOUNTINGS

AND VALVES.

Since 1843 Hopkinson's Patent Safety Boiler Mountings and Valves have by their unfailing service established a reputation which is supreme throughout the world.

In this 80 years of progress every possible improvement and safety device which experience deems essential has been embodied in Hopkinson Specialities.

To-day they stand unrivalled for High Quality, Efficiency, and Dependability, and wherever good work exists you will find Hopkinson Valves.

Their increased use by discerning engineers and steam users is proof of the positive economy which results from installing quality appliances.

Hopkinson's quality is standard the world over and has taken a big part in the safe equipment of Boiler and Power Plants.

Safeguard your position now and in the future by specifying "**Hopkinson's Own Make.**"

THE IRON AND STEEL WIRE INDUSTRY.

By H. D. LLOYD, Assoc.M.Inst.C.E.

THE figures for Imports and Exports in the above-mentioned Industry now given show that a turning point in the Industry was reached in the six months ending December, 1921. The figures of Exports for that period are the lowest recorded probably in the present century, and it is encouraging to observe the marked increase in weight of Exports for the subsequent six months to June, 1922.

On the other hand, a close observation of the Imports will show that there has been for the last eighteen months a steady growth in Imports, as follows:—

Half-year to June, 1921	41,041 tons
" December, 1921	54,212 "
" June, 1922	59,952 "

The last half year referred to, with the astonishing total of 60,000 tons of Imports of Wire Rods, Wire and Wire products, should be the subject of serious consideration in Great Britain. If the material thus imported could be manufactured in Great Britain, it would, the present writer estimates, find employment for some 10,000 persons.

This large Import is due to the fact that our competitors

abroad can produce the material cheaper than it can be produced in Great Britain, and, if this condition of things could be altered, there is no reason whatever why the material should not be produced in Great Britain, to the great benefit of the country, through the relief of unemployment.

With the exception of Wire Nails, for which Great Britain has not yet adequate manufacturing facilities, plants do in fact exist which could produce practically all the other descriptions of Wire Rods and Wire at present being imported, to the huge total of nearly 2,000 tons per week.

It is interesting to note that the Imports referred to are not only of German origin, but include large quantities from Belgium, U.S.A., France and other countries. The German capacity of Iron and Steel production, as the result of the War, has been reduced by some 50%, and German manufacturers, though helped in efforts to export by the continued depression in the value of the Mark, have at the same time not had a large surplus of Steel Wire Rods and Wires to dump into this country.

TUBE MANUFACTURES.

WROUGHT-IRON AND MILD STEEL TUBES OR PIPES.

By H. J. RHODES.

ALTHOUGH the manufacture of tubes from wrought iron and steel is a comparatively new industry, there must be many users of tubes, or pipes as they are just as often called, to whom the industry and the process of manufacture are more or less unknown. It seems very probable that the first tubes manufactured from wrought iron were intended for the barrels of guns, and used only for that purpose. One of the first instances of their application to one of those purposes for which they are now so largely used is reported in 1816, when William Murdoch, the pioneer of gas lighting, employed old gun barrels screwed together to convey gas in his works near Birmingham. The end of the war in Europe in that year had probably very greatly reduced the demand for gun barrels and thrown large quantities on the market. In many parts of the country to-day gas pipes are still spoken of as gun barrel. The need of wrought iron pipes grew rapidly, and a quicker and less costly method of manufacture from that of gun-barrel making had to be sought for, and this was discovered in 1825 by Cornelius Whitehouse, of Wednesbury, when he invented the process of butt-welding by a draw-bench and dies.

The principles of his invention have been in use ever since for the manufacture of tubes by the butt-welding process, but, naturally, the methods of application have been greatly altered and improved.

The production of tubes by the Whitehouse invention did not for long fulfil all the requirements of the new conditions which were arising, and for which larger and stronger tubes became necessary than could be produced by the butt-welding process. The minds of many ingenious men were at work, and it was only after long and costly experimenting that, somewhere about the year 1842, the process known as lap-welding was established.

The methods of welding tubes known as butt-welding and lap-welding were, until comparatively recently, the only processes employed for the manufacture of wrought iron and steel tubes, and probably more than three-fourths of the world's requirements are still manufactured by these two original methods.

The butt-welding process is usually the process by which tubes from $\frac{1}{4}$ -inch to 2-inch bore are manufactured for gas, water, steam, and like purposes where the pressures are normal.

The strips or hoops are delivered to the tube mill from the iron and steel works of a length, width and thickness suitable for the size of the tube to be made. The flat strips and hoops are brought to a welding heat in a furnace, gripped by tongs, and drawn from the furnace through a bell-shaped die. The die is shaped so as to gradually bring the hoop into the shape of a tube, the edges being forced squarely together and welded. The tube after being welded passes immediately from the draw-bench through sizing and straightening rolls to give the correct outside diameter and finish to the tubes.

The lap-welding process can be applied to all sizes of tube from $\frac{1}{4}$ inch up to as large as 6 feet.

The strips or plates are first of all planed or scarfed on the edges. The scarfed strips are then heated to a bright red heat in a "turning-up" or "bending furnace," from which they are drawn through a die so designed as to bend the plate into a tubular shape with the edges over-lapping. The plate, when so shaped, is termed a skelp. The skelp passes into another furnace where it is raised to a welding heat, and is then pushed out at the front of the furnace into the welding rolls, which are set one above the other, each having a semi-circular groove of a

diameter equal to the external diameter of the tube. Between these rolls a mandril is held in position on a long bar, over which the revolving rolls rapidly carry the tube. Thus the weld is made by the pressure exerted on the lapped edges while passing between the roll surfaces and the mandril.

The method described of lap-welding through rolls is generally employed for sizes up to about 12-inch diameter, and diameters larger than 12 inch are usually welded by a different process. The plates are formed into tubular shape in plate bending rolls instead of through dies on a draw-bench. The tube in this form is then fed through a welding machine, where, instead of heating the whole tube the lapped edges only are heated bit by bit by the application of water-gas, or carbon hydrogen flame, followed by hammers or rollers, by which the welding is effected along the whole length of the seam.

When the use of mild steel became general, a great deal of attention was directed to finding a suitable method of producing tubes direct from solid bars, by which means of course, there would be no weld. These tubes became known as solid drawn or weldless tubes. A great deal of ingenuity was displayed, but the difficulties to be overcome were so great that it is only within the last few years, and after the expenditure of very large sums of money, that any of these processes proved a commercial success. By far the greater part of the weldless tubes made to-day are produced by what is known as the hot-rolled process. As a rule cold-drawn tubes are only produced for certain special purposes, the cost of production being very much greater. The first operation in the manufacture of hot-rolled weldless steel tubes starts upon a billet of round steel bar, cut to such dimensions as will give the required size and length of tube.

The solid billets are charged into a heating furnace where the highest temperature is conserved at the drawing out end, so that the billet in its progress through the furnace is assured of a uniform heat throughout. A number of methods have been employed for piercing the billet and rolling it after piercing into a tube. The process now generally adopted for piercing is either in a hydraulic press or through a piercing machine, where the revolving action of the rolls of this machine cause a displacement of the metal in the centre, while at the same time forcing the billet over the mandril. The pierced billet being still hot is rolled out into a tube, either through grooved rolls over a mandril or by means of a pilger or gap rolling mill. After the tube comes from the hot rolling mills, it goes into a pickling tank to remove scale. Following upon this operation, the tube is finally finished by receiving one or more cold passes through a die on the draw-bench. The effect of cold drawing hardens the steel, and after each cold pass the tube is annealed.

The processes of manufacture of wrought iron and steel tubes briefly described in this short article, viz., the welded and the weldless processes, together constitute the methods by which practically the entire requirements of the world are supplied.

The industry of tube-making has grown to enormous dimensions. There are large works in most European countries, and in Canada and the United States. Great Britain, the pioneer of the industry, is one of the largest producers.

LEAD.

THE manufacture of lead is amongst the oldest of British industries, and within recent years it has developed into one of considerable magnitude and importance.

Among the chief uses to which lead is put is its conversion into white lead (hydrated carbonate), which, when ground with oil, forms a pigment of great value in itself, and is the most reliable base for practically all paints.

It is also largely used in glazing pottery and porcelain.

The method of manufacture chiefly adopted in this country is the old stack process, which, though slow, produces white lead of great covering capacity, density and durability.

Red Lead (sesquioxide) is manufactured on a large scale, and after mixing with oil, forms the most valuable pigment for protecting steel and ironwork; it is also an important ingredient in optical and other glasses, and during the war was in great demand for the electrical storage batteries used in submarines, &c.

Litharge (monoxide), an equally important oxide of lead, is largely used in the rubber, varnish and accumulator industries.

Metallic lead is in universal use in civilized countries in the form of sheet lead for roofing, &c., and pipes for water and gas; and owing to its great acid resisting power, pure lead is extensively utilized in plant for the manufacture of sulphuric acid and other chemical products.

For chemical purposes the presence of slight impurities is sufficient to seriously

reduce the life of the sheets and pipe, and ingenious methods have recently been introduced for freeing the lead from all traces of impurities.

Alloyed with tin, lead forms solder, and lead alloyed with antimony is used for shrapnel bullets, type metal, &c.

Lead also is largely used for covering electric cables.

In Nature, lead occurs chiefly as a sulphide ore, which, after being mined and dressed, is calcined for the removal of the sulphur, and the roasted ore is smelted—usually in water-jacketed blast furnaces—to the metallic state.

The metallic lead thus obtained frequently contains silver of considerable value and appreciable quantities of gold and other metals.

Before such lead can be manufactured, the silver and gold must be extracted and the other impurities removed.

Impurities such as copper, antimony, and arsenic are eliminated by liquation and calcination, and the precious metals are usually recovered by stirring zinc into the molten lead: zinc, being lighter than lead and having a greater affinity for gold and silver than lead possesses, on cooling carries the precious metals to the surface, so that they can be removed by skimming.

Lead ore is mined to a small extent in the North of England, Derbyshire, and Wales, but the chief lead-producing countries at the present time are America, Australia, Spain and Burma.

The world's production of lead exceeds a million tons per annum.

SPELTER.

By the Editor of the "Metal Bulletin."

THE ores from which spelter is recovered are very widely distributed throughout the world, the main descriptions being sulphides, carbonates and silicates. Blende is a sulphide ore, Smithsonite a carbonate and Willemite a silicate. The highest grades of blende contain about 67% of zinc, but the commercial material ordinarily treated is of lower quality and invariably contains appreciable percentages of other metals, such as cadmium, lead, silver, iron and manganese. Smithsonite carries about 52% and Willemite about 60% of zinc. Very large quantities of zinc-bearing ores are obtained in the Broken Hill district of Australia, where there is an enormous deposit of blende, galena (lead ore), iron pyrites and other minerals, frequently so intimately mixed that the one cannot be distinguished from the other in mass. When the mines of this district were first developed, they were worked only for lead and silver, the zinc being disregarded. Great quantities of this rejected material accumulated, and processes were ultimately devised for recovering the zinc, or spelter, as it is more generally known, the pre-war treatment of this being mainly in Germany and Belgium. The United States has enormous zinc ore reserves, and these, during the war, were developed to such an extent, that that country became the leading producer of spelter.

The ores, when mined, contain a large proportion of waste material of one kind and another, so that the process of treatment is to separate the metallic particles as fully as possible from the other matter, to which end the ores are crushed, much use being made of water to carry away the undesirable waste. In the magnetic process of separation, which is necessary in the case of certain ores, the raw material is first calcined, or calcined and roasted before being crushed and treated, while yet another process for recovering the metallic values is that of flotation. In the last named, when the ore is crushed fine, oil and water are used to recover the metallic particles, the oil having a particular affinity for sulphide minerals.

After having been concentrated by the removal of impurities, the ores are calcined and roasted so that the sulphur may be driven off. This process, moreover, removes the moisture which is present in the raw ore to the extent of 5% or so. The smelting of a perfectly dry ore avoids loss of heat and ensures economy in manufacture at later stages. A large proportion of the zinc ores shipped from Italy, North Africa, Greece and Spain are calcined before shipment, as the reduction in weight involved saves freight charges. Having been calcined and roasted, the ores are smelted in crucibles in a furnace, the spelter being driven off in a vapour. This vapour condenses and becomes rough spelter, which, after being remelted in fire-clay pots, and the impurities which rise to the surface skimmed off, is the spelter of commerce. Much of the success in smelting depends upon the correct regulation of the temperature. Considerable progress has been made in the production of electrolytic zinc, particularly in Tasmania, the United States and Scandinavia, the metal

obtained from this process being of a very high purity, 99.95% or more. The largest plant of the kind will ultimately be that at Risdon in Tasmania, which is working on Broken Hill concentrates, and is now making considerable regular shipments to Europe and the far East.

Spelter finds wide use in very many directions. In normal times possibly as much as one-half of the world's annual production is absorbed in the manufacture of galvanised sheets, and other galvanised goods, such as tubes, wire netting, sanitary ware, baths, buckets, and so on. Spelter, too, is a very important constituent in brass, and in normal times up to one-quarter of the total consumption of the metal may be accounted for in this direction. Another important outlet is in the manufacture of zinc sheets, for the construction of roofs and many articles in common domestic use, whilst further quantities are used up in the electrical trade, and also in the form of shavings for precipitating gold from cyanide solutions, and in the form of ingots for refining argentiferous lead. Another outlet is in making oxide of zinc or zinc white, for which there is a large market in the paint and colour trades.

The production of spelter in this country appears to date from about the middle of the 18th century, when works were erected near Bristol, which were carried on with various changes until 1880. Prior to the production of the metal here, spelter was obtained from abroad, small quantities coming in from China and other parts of the far East, which were imported under various names such as spiauter, tutaneg, and calaem, but the industry seems to have obtained a firmer footing on the Continent than here. To-day South Wales is the chief producing area in the United Kingdom, the first plant having been set up in Swansea in 1835.

The world's production of spelter is estimated as follows:—

	1918	1919	1920	1921
AUSTRALASIA	5,450	6,000	9,500	2,000 tons
AUSTRIA	—	4,000	—	—
BELGIUM	6,000	15,600	77,000	68,000
CANADA	16,000	11,000	18,000	25,000
FRANCE	12,000	18,000	20,000	24,000
GERMANY	236,000	50,000	94,000	92,000
GREAT BRITAIN	50,000	30,000	23,000	6,000
JAPAN	45,000	22,000	8,000	7,000
SCANDINAVIA	10,000	4,000	14,000	8,000
SPAIN	16,000	2,000	6,000	4,000
UNITED STATES	446,000	420,000	410,000	176,000
OTHER COUNTRIES ..	20,000	20,000	15,000	30,000
Total ..	862,450	602,600	694,000	437,000

Tabulated below are the extreme prices paid here during the last twelve years for good ordinary brands of spelter, as given in *Quin's Metal Handbook and Statistics*:—

1910.. £214 and £244	1916.. £44 and £110
1911.. 22½ " 27½	1917.. 45½ " 58
1912.. 25 " 27½	1918.. 50 " 56
1913.. 204 " 28½	1919.. 34½ " 50½
1914.. 214 " 40	1920.. 224 " 62½
1915.. 28 " 115	1921.. 23½ " 25½

BRITISH GRANITE QUARRIES.

By H. J. GRACE.

GRANITE primarily consists of quartz and orthoclase, biotite, muscovite, hornblende, augite; and is holocrystalline. Other minerals entering into its composition are plagioclase feldspar, oxides of iron, apatite, zircon, garnet, epidote, cordierite, sphene, topaz and tinstone; calcite, limonite, kaolin and chlorite being among the resultant products of decomposition. Commercially, the term "granites" covers products that evade the strictly correct geological definition, such as syenites, diorites, granophyres, gabbros, greenstones, and in some cases grits.

Aberdeen quarries yield a true and distinctive granite; Peterhead, Kemnay, Dalbeattie, Creetown and Ross of Mull being other deservedly renowned centres of the industry.

In England, Leicestershire, Cornwall, Cumberland and Westmoreland are rich in areas of supply; Warwickshire also possesses local sources. Wales has large areas extensively worked in Carnarvonshire. Ireland has a considerable supply in several districts, notably in Newry. The Channel Islands produce a large quantity of material, and the Isle of Man has an extensive area; but difficulties of transport hinder the development of the Manx industry.

The first step in the opening of any quarry is the removal of the top soil, or overburden, after which lifts or levels are excavated of varying depths. The accumulation of spring and surface water during the operation of sinking, and afterwards, necessitates almost continuous pumping where the quarries are worked in excavations or pits. The granite having been bored, the faces are divided into motions, averaging usually about 10 yards in width up to about 20 yards, with a set of men to each motion. Preparatory to blasting, holes are drilled into the rock by hand or by means of steam drilling machines, the customary depth being from 10 to 12 feet, the deepest about 20 feet, with a top diameter of $3\frac{1}{2}$ to 4 inches. As a rule two to four charges are necessary, the first being so regulated as to be only sufficiently powerful to spring the rocks—that is, to loosen and open out their joints—the final stronger charge completing the work. Stones that remain unworkably large after the explosion are separately bored, charged with blasting powder, and reduced in size. Blocks intended for sundry specific purposes are roughly dressed below, prior to their removal to the surface for monumental, building, kerb or sett-making purposes and for the crushing or breaking mills. The carriage of the deposits to these mills is facilitated by tram-lines and effected by horse and mechanical power. In some instances the most up-to-date quarries have successfully adopted for this haulage an aerial power-worked cableway of extraordinarily

ingenious design, the system being suggestively known as the Blondin. Steel skips carried along this cableway have each a loading capacity of 50 cwt. and upwards. With clock-like regularity these receptacles are lowered empty, hauled up full, run swiftly overhead to the crushers, into the hoppers of which their contents are deposited, and then return to their starting place, to be again lowered and refilled. In the crushing mills the stones pass through breakers into rollers, falling into elevators and then into screens, which sort out the different sizes; rejections, or tailings, being recrushed.

In the dressing of stones for setts, kerbs, etc., the first or preparatory stage is carried out on the floor of the quarry, where the blockmakers shape them into the rough form in which they reach the settmakers and kerbdressers above. These settmakers exercise a wonderfully accurate judgment in deciding at sight how each block will shape best and with least waste under their hands. Into this judged shape it is wrought by heavy hammers, lighter ones being substituted for the finishing touches. For kerbmaking much larger blocks are used, the dressers wielding a variety of tools. For certain purposes, such as "Durax" setts, a stone-splitting machine of Danish invention, in the working of which a movement of the foot controls the action of steam hammers, has proved serviceable. The bursting of big stones of a size otherwise unwieldy has also to be accomplished by hand. An expert, with a sharp heavy hammer, nicks the line of fracture in about the centre, then draws the great block by striking it smartly at one end. After a varying number of blows it severs at the line made by nicking. Stones still larger are divided by what is known as the plug and feather process; the largest of all are drilled and blasted when the former process would be ineffectual. A trade is carried on in block or unbroken granite for breaking by hand on roads and in workhouses.

The latest available returns are those for 1921, in which year the total production of igneous rocks in England, Scotland, Ireland, Wales and the Isle of Man (exclusive of that from quarries of less than 20 feet deep) was 5,740,014 tons (made up of 5,715,178 tons under the Quarries Act, 24,836 under the Metalliferous Mines Regulation Act, against 5,620,691 tons in 1920. Limestone (other than chalk) was produced to the extent of 7,335,862 tons (made up of 7,172,163 tons under the Quarries Act, 161,421 under the Metalliferous Mines Regulation Act, and 22,781 under the Coal Mines Act), against 11,227,817 in 1920.

The official returns for the same year accounted for 1,450 tons of manufactured and 206 tons of rough granite exported, and 47,804 tons of manufactured and 415,320 tons of rough imported.

THE COAL TAR COLOUR INDUSTRY.

THE coal tar colour industry began with the discovery by the late Sir W. H. Perkin, in 1856, of a mauve colouring matter derived from coal tar. A works was started at Greenford Green, in Middlesex, for the manufacture of this colour, and the manufacture of other colours subsequently discovered was in due course undertaken. Scientifically and commercially, therefore, this important industry is of British origin. The industry continued to grow, but, for a number of causes, which cannot be adequately treated here, the development took place almost entirely in Germany, and during the two or three decades preceding the outbreak of the war the various important industries in this country which required dyestuffs were dependent on German sources of supply.

Some idea of the general importance of the industry may be gleaned from the following figures. In 1913 we imported £1,731,000 worth of dyestuffs from Germany and £146,000 from Switzerland, and it is generally assumed that dyestuffs to the value of about £100,000 were purchased by British consumers from British makers. These figures indicate a total British consumption of approximately £2,000,000, and the enormous preponderance of Germany will be recognised.

It is not, however, the actual value of the dyestuffs which makes the industry so important, as the much greater value of the outputs of industries dependent on synthetic dyestuffs, notably the great textile industries of this country.

It is impossible here to examine in detail the importance of dyestuffs to the various dye-consuming industries, and the example of the cotton industry must suffice. The amount paid by manufacturers of cotton goods in 1913 to dyers, for operations involving the use of dyestuffs, exceeded £9,000,000, or more than four times the value of the total consumption of dyes in the United Kingdom. This is value of work only, and not the value of the dyed and printed articles. These dyed and printed cotton goods are consumed all the world over, and the value of the exports of dyed goods in 1913 (excluding such articles as hosiery, lace, ribbons, etc.) exceeded £70,000,000. These exports were sent very largely to British and other ports in Asia, where an increasing market is to be anticipated. Taking the dye-consuming industries together, it has been estimated that the value of the goods made in the United Kingdom in a year, the manufacture of which involves the use of synthetic dyestuffs, exceeds £200,000,000.

The war has shown, however, that the synthetic dyestuffs industry has much more importance than that of a principal key industry, for it is now realised that it is intimately associated with questions of national defence. Our late enemies, in an attempt to recover the initiative lost at the battle of the Marne, introduced a new element into warfare in 1915 by the use of a poisonous gas on the northern part of the western front. The method achieved a very considerable amount of local success, and there is no doubt that had the Germans waited until they were able to use their new weapon on a larger scale they would have recaptured the initiative and the whole course of the war would have been changed. A new arm, however, had

been successfully invented, and "chemical warfare" was added to the armories of nations. The weapon developed as the war proceeded, and from the simple discharge of an elemental gas from cylinders placed actually in the trenches, there grew large numbers of complex substances, solid, liquid and gaseous, discharged in shells by the ordinary artillery or in special containers from special projectors. Every military requirement produced its special toxic substance and in the later stages of the war more than one half the projectiles fired were filled with chemical warfare products. This weapon, it is safe to say, will play a predominant and even decisive part in future conflicts.

The question arises: How could the Germans create and rapidly develop this new arm? The answer is because they possessed a fully developed dyestuff industry. The substances used in chemical warfare are intimately related, chemically, with those produced in peace times in a dyestuff factory. They are made from the same raw materials, in the same plant, by similar processes. It cannot be doubted, therefore, that the Germans were assisted, in coming to a conclusion to use toxic substances, by the fact that all the necessary plant and personnel existed in their great colour factories. The great bulk of all the toxic substances used by the Germans throughout the whole course of the war was produced in the dyestuff factories, and there was the most intimate association between the German General Staff and the managers of the factories, who were called in to advise on all matters affecting production for chemical warfare.

The Governments of the Allies, who were forced to adopt the use of toxic substances, found themselves in an extremely difficult position, for not one of them had the use of a dyestuff industry at all comparable with that of the Germans. It is true that Messrs. Levinstein Limited, in England, manufacturers of dyestuffs, rendered yeoman service, but the Allied forces were, on the whole, supplied from rapidly erected improvised plants. It is a great tribute to the energy of the Allies that they were able, in the course of so few years, to provide adequate supplies of chemical warfare substances for their armies in the field.

It is important to note that a large scale use of toxic substances in the opening stages of a campaign can have decisive results. It is not likely that any country will establish permanent chemical warfare arsenals, firstly because of the expense, and secondly because such a course is technically unsound. It is clear, therefore, that only a country with a fully developed dyestuff industry can conduct such large scale operations immediately after the outbreak of hostilities. Germany is the only country to-day in a position to wage chemical warfare on a really gigantic scale, and until Great Britain possesses a dyestuff industry commensurate with its needs, one of the greatest problems of national defence will remain unsolved. Every support must, therefore, be extended to the new British industry in order that it may be completely developed. Only then will the country be secure from economic aggression in time of peace and from military disaster in time of war.

THE COTTON INDUSTRY.

THERE is perhaps no industry that has suffered such serious disorganisation by reason of the War as the cotton industry. It was the fate of France and Belgium to have a considerable part of their cotton-spinning and manufacturing machinery within the zone of hostilities, and of Russia to have her cotton factories despoiled during the first outburst of Bolshevik fury, while England, for a time, experienced a great lack of the raw material through the activities of the German submarine. With the signing of the Armistice, England, with all her machinery intact, had the advantage of a short period of prosperity, but towards the close of 1920 the boom came to an end, largely owing to the campaign of slump which originated in America and upset confidence throughout the world, and from that time until now the trade has gone through a period of unexampled depression. If the advice of experts who had made a study of world conditions had been taken, we should not have had the enormous rise in the cost of the raw material, and the rapid reaction might have been considerably modified.

Conditions everywhere have been bad, but England, owing to being the universal provider and chief exporter of cotton goods, has suffered from the effects of the world's poverty more than any other country. Fully eighty per cent. of her cotton goods goes overseas, and therefore she is faced with far greater risks than other countries whose exportable surplus of these goods over home requirements is insignificant. Her greatest customers, India and China, have particularly suffered. India, which is Lancashire's largest customer, was hit even worse than China. She had the misfortune to buy largely at the very top of the boom, and delivery of the goods coincided with the great slump which followed the period of reckless dealing. In addition, she had in 1920 a very poor monsoon, which meant that her buying power was reduced at the time the goods she wanted were highest in price. The result was that trade came almost to a standstill, and up-country merchants in India defaulted in a most shameless way. Merchants at the ports, in turn, sought to have the prices of the goods they had bought reduced by as much as fifty per cent., but Lancashire, caught in the vortex herself, was unable to comply, although she offered very substantial abatements.

Consequently, for the best part of two years India has been engaged in the difficult process of liquidating high-priced stocks, and Lancashire, perforce, has had to wait, although cognat of the fact that the people of India were wanting her products more keenly than ever. In all kinds of ways production costs have been reduced in order to bring prices within the reach of purchasers in the Far East; but despite this, and the fact that there have been two good monsoons since the slump began, buyers have bought cautiously, and such purchasing as we have seen has been at the disadvantage of spinners and manufacturers, who have been obliged to realise their stocks at under cost price to satisfy bankers' requirements.

Indeed, so persistently has the merchant exploited the weak sellers, that Sir Charles Macara, the President of the International Cotton Federation, from 1904 to 1915, who has used his extensive experience by carrying on a large propaganda work through the press of the world, exerted himself to regulate supplies to

demand, and so prevent the selling of both yarn and cloth under cost of production. Only in this way, it was believed, would buyers be induced to pay reasonable prices and place orders with freedom. There seems little doubt that both India and China, as the result of good harvests, can pay what is now being asked for cotton goods, and as stocks have now been largely cleared, it is believed that the trade will, before long, be restored to something of its old vigour and prestige.

It is some satisfaction to know that when trade does revive, it is to England that the world will have to turn for the replenishment of its stocks. Great Britain has close upon 60,000,000 spindles out of a world total of 154,000,000, but other countries are mainly engaged in supplying their own requirements, while Great Britain has over three-quarters of her production for export.

Much is made from time to time of the possibility of England being ousted from her command of the cotton markets of the world, and we cannot do better than quote Sir Charles Macara's comments on the International Cotton Federation's statistics published last September. He said:—

"These statistics show that India, China and Japan have in round figures only 12,000,000 cotton spindles for their combined population of 800,000,000. That number of spindles is needed to supply the requirements of Great Britain and Ireland, which have a population of under 50,000,000. The installation of the spindles in India, China and Japan has cost these countries double what they would have cost to erect in England, and this machinery is mostly employed in making coarse goods which are not catered for in England. In addition to this it has to be remembered that it has taken nearly 100 years for these far Eastern countries to attain their present spindleage. With such information as this, which has been available for many years, it is surprising that any intelligent person should consider these Eastern countries serious competitors to Lancashire, more especially at a time when, owing to the War, the textile machinists are so much in arrears of the world's requirements and the cost of machinery is so excessive as to be almost prohibitive."

The products of such countries as India, China and Japan can hardly be said to come into competition with English goods, which, as the years have gone by, have become finer and finer in quality until at the present time they are not approached by those of any country in the world.

Those who do not understand this matter of fine spinning are often led astray when comparing the amount of cotton used by one country and another. The finer the spinning, the less is the weight of cotton used, a fact which pessimists who see foreign countries increasing rapidly their takings of raw material are apt to overlook.

England, indeed, has no cause to fear her foreign competitors. What will be her concern in years to come will be the source of her supplies of raw cotton. At present the boll weevil is making frightful inroads into the American crops, and England, unfortunately, is not bestirring herself as she ought to make good the inevitable deficiency within the Empire.

VELVET AND CORDUROY INDUSTRY.

VELVET, one of the most ancient fabrics of history, was produced by the Chinese—probably made from cotton—at a remote date before the Christian era.

Velvet making, with other textile arts, slowly crossed the then more civilised continent of Asia, and the spacious times of the great Crusades brought textile arts into touch with the undeveloped western world. Persia, too, had her share in this evolution, and the influence of Persian design on figured and woven velvet is traceable in the productions of those European countries which succeeded to these arts in the western movement of civilisation.

It is interesting to trace its evolution from the East, through maritime Venice, Genoa, France, Flanders, and the Spanish Netherlands to Lancashire and Manchester, but the space of this article does not permit more than a brief mention of these stages.

Fustian may be considered the parent of the modern cotton velvet and its family connections. Its name was probably of Egyptian derivation, and in England of the Middle Ages it was the wear of the serving-man, whilst people of quality wore velvet. Probably what we now know as fustian was then made from the coarse wool of the country, and is known to have been combined with linen warps from Ireland. By 1641, Manchester had a reputation for its fustians which were then actually made from Cyprus and Smyrna cotton, and it is chronicled that the city had a considerable export of these goods to the Continent and America.

From this parent fabric were velvet and corduroy evolved, and fustian remains the family name covering all classes of cotton pile fabrics, velvets, velveteens, cords, moleskins, beaver-teens, imperials, diagonals, &c.

Many highly-specialised processes are necessary to convert the raw material into the beautiful finished article as seen in Regent Street or the Champs Elysées. The grey material is woven mainly in Oldham, Preston, Bolton, and East Lancashire, and subsequently focussed in Manchester, where the merchant arranges the various operations contributing to the successful production of the finished velvet or corduroy.

Nothing but the best material will produce the good grades—fine Egyptian yarns for strength in the warp, and soft, silky American of long staple for the weft—suitably spun to give the velvet touch. Of the numerous operations none is more intricate and important than that of cutting the pile. After preparatory stiffening and limeing this operation, calling for much manual dexterity, consists in opening up the fine longitudinal tunnels, or "races," into which the cloth is woven, by means of a fine steel knife, sheathed in a long, finely-pointed guide which opens up the race, enabling the sharp edge of the knife to sever the top of the tunnel, leaving the walls, as it were, of tufts of pile standing. These tufts form the velvet.

Indifferent weaving, or poor material in the shape of low-grade cotton, would result in imperfections which would defect the knife and damage would result.

A considerable development of machine cutting has taken place during this century. Many inventors in the last century have attacked the problem of cutting the velvet pile by machinery, but few of the many ingenious schemes have materialised. However, in recent times one or two very effective cutting machines

have been introduced, and whilst the bulk of the work is still done by hand, it is evident the well-designed machine has a great future before it. Cords have been cut by machinery for a long time, but the bulk of the velvet cutting is still carried on by hand. Once a domestic industry, the stress of competition has evolved an organisation dealing with large scale production and output of good character.

The pile is next manipulated by brushes, shorn, singed, and made of smooth surface for dyeing. Careful workmanship is required in all these operations, and the fast dye is a necessary accompaniment of good quality velvet. After dyeing a beautiful finish is applied to the fabric, giving it a high degree of lustre, and the richness and lustre keeps its pride of place.

Standardisation, however desirable, conflicts with the varied requirements of customers from the Arctic Circle to the Equator, as, though the home trade consumes freely, probably 80 per cent. of the velvet production goes to overseas markets.

Plain dyed velvets are supplemented by beautiful styles of printed, figured, striped and brocaded velvets, and acid printing and shot effects are tastefully produced. Velvet supplies such diverse uses as ribbons and trimmings, elegant footwear and juvenile clothing, whilst corduroy clothes the rising generation.

Corduroy may briefly be described as velvet made with coarser, cheaper yarns, in stripes or ribs of almost infinite variety—from the thick-sett to the cable cord. A well-proved article of great utility, it gives endless wear and satisfaction to its world-wide users—rural Britain, the navy and the iron-worker find nothing to equal it; the constructional gangs of North America, clothed in corduroy, have built the American railroad system; South African farmers, Australian stockmen, French and Continental peasantry—all these workers testify to the excellence of corduroy fabrics. The British and Allied War Departments discovered during the war what an unequalled material for hard wear was furnished in good quality corduroy. Furniture manufacturers and upholsterers have found the scope corduroy gives them in its beautiful colourings and high-class designs for house adornment.

Unfortunately at present the economic chaos on the Continent of Europe is having an adverse effect on the velvet and corduroy industry. When Europe settles down and begins to work hard and produce steadily, the demand for the various products comprising this article will spring up again, and the depreciated exchanges may again permit of making business more stable in the outlets which velvet and corduroy normally seek. German competition is beginning to be felt once more. First-class dyes must be used in the production of velvet, and no fiscal policy tending to increase the cost of these, or diminish their efficiency, can be looked upon with favour by the manufacturers of these articles.

In the past, the Manchester manufacturer has not been much inclined to co-operate, but in the future a different attitude may be necessary. Attention must be given to research work, and it is probable that in the near future the advantages of co-operation will become more evident than in the past. This will help the Manchester manufacturer to place more effectively before the world the excellent qualities of the various cotton pile fabrics so well produced in that busy city.

‘THE BRITISH GLUE INDUSTRY.

WITH the passing of War and the world-wide upheavals it created, came the problem of restoring to the normal international trade and commercial relations, shattered almost irretrievably by years of universal conflict.

Great Britain, the “nation of shopkeepers,” accustomed in times of fair trade and prosperity to rely upon other countries for the absorption of her excess manufactures, found herself at the outbreak of hostilities obliged, by reason of the unprecedented volume of material and goods urgently required for war purposes, and the shutting off of other supply sources, to increase her own production to an enormous degree.

All over the kingdom new manufactures and factories, often staffed and controlled by workers of but limited experience, came rapidly into being. With the extension of armies and an ever-lengthening battle line, came the vital need, in almost every conceivable manufacture, for swift and daily increasing production.

Under such conditions, harassed by dearth of proper material, shortage of labour, and the hasty recruiting of untrained employees, it is hardly a matter for wonder that in many cases the high standard previously set for British manufactures suffered a set-back and that production obtained a temporary test of speed rather than one of quality.

Gradually, however, the war taught, to user and maker alike, the need for better and more efficient methods. Linking forces with trade experts, co-operating in test and research, came the scientist to advise and assist in speeding up and improving British production.

In no trade more than in the British industry of Glue-making has research and the widening of expert knowledge played a greater part. Handed down from generation to generation and restricted in progress by the peculiar demands of consumers, methods of glue manufacture, old-fashioned alike in the means and machinery utilised, left much to be desired. Progress under such handicaps was necessarily slow, but with the enlisting of modern methods, coupled with sound knowledge of materials and standards of quality, came a rapid and most desirable development.

Glue manufacturers realised increasingly the requirements of consumers, and commenced to cater specially for individual trades, and to manufacture, by specified processes from carefully selected raw material, particular brands of glue for particular trades.

Commercial glues and gelatines are, at the best, elusive substances. Simple tests for purity are unreliable, inasmuch that those believed in by one set of users or makers as comprehensive and indicative of certain definite properties are regarded as inadequate or untrustworthy by others. In addition, the uses of glues and gelatines are so divergent that tests or analyses suitable for one will be useless as an indication of the value of material for another.

For example, the tendency to foam when glue is employed in mechanical spreaders is very undesirable, and the foam test is of considerable value, but, conversely, if the glue is to be applied by hand, the test is of little utility or significance.

Again, when glue is used on paper as a size or on wall-paper as a binder for the clay-filler, an excess of grease has the disadvantage of forming minute drops, which spot and disfigure the finished paper. When used as an admixture with certain dyes, the presence of acid or alkaline must be avoided, as the dye would be affected to its disadvantage. Special and very precise tests are therefore very essential for glues designed to fill particular needs.

Gelatines for use in the manufacture of photographic films or printing rollers must have an exceptionally high jelly strength. When used for food or medicinal purposes, it must be free from harmful impurities. Such a recital of the diverse qualities required for different processes might be extended indefinitely.

In Great Britain, largely as a direct result of the increased study and knowledge of the product by users, the manufacture of high-grade glues and gelatines has progressed enormously. Scientifically and technically the industry has equipped itself and increased its resources to an extent undreamed of a decade ago.

In this connection it is interesting to note the progress and development of British Glues and Chemicals, Ltd., an amalgamation created with the object of combining under one head and organisation the resources, experience and peculiar facilities of ten of the principal glue firms in the kingdom.

Possessing individually particular knowledge of particular trades, coupled with deservedly wide reputations for quality of productions, the firms comprising British Glues and Chemicals, Ltd., are united in research and manufacture, with the aim and object of creating and maintaining for the United Kingdom a reputation for glue production lasting, sure, and second to none.

BRITISH COMMERCIAL AND PUBLIC SERVICE MOTOR VEHICLES.

FOR some time past the general depression in trade and the consequent inability of traders to purchase new plant has detrimentally affected the demand for commercial motor vehicles. From the standpoint of the manufacturer, another serious factor has been the flooding of the markets by surplus Government vehicles, which, though speculative investments by reason of their past history, have often attracted buyers because they were offered at absurdly low prices. Meanwhile the new products of the manufacturing industry, while offered at strictly reasonable prices, having regard to current costs and to the quality of the vehicles supplied, have found only a limited market in a trading community compelled by the force of circumstances to cut down every expenditure to a minimum. The trader knows that his ultimate interests are best served by the purchase of vehicles of good quality, capable of giving economical service for a long period. Nevertheless, when there is a marked shortage of ready money, he may find himself compelled to adopt temporarily the inherently faulty principle of buying the cheapest possible article, regardless of its inferior quality. From the point of view of its permanent reputation, the British industry would have been wrong to have lowered its quality to meet the demand for cheaper goods occasioned by the slump, but for the time being the fact that it has refused to do so has rendered its difficulties all the more acute. The industry is also largely dependent on the development of its overseas markets, the demand in which has of late been reduced, not only by the general depression, but also by the artificial inequality of competition caused by the abnormal state of foreign exchanges.

The most satisfactory developments during the past year have been in respect of motor coach services. The demand for these was immensely stimulated in 1921 by reason of the exceptional summer season and the difficulties which the railways were experiencing in maintaining their services on account of the stoppage of work in the coal mines. These factors, together, led to the establishment of a large number of regular coach services operating between industrial and residential centres and various holiday and seaside resorts. In 1921 the provision of motor coach services proved a very profitable business, and this occasioned a demand for additional vehicles for the 1922 season. The tendency has been somewhat in the direction of the employment of rather smaller vehicles than have hitherto predominated, the main reason being that motor coaches of big capacity have proved in some respects unsuitable for the conduct of country services, and their presence on other than main roads has led to complaints on the part of the authorities responsible for road maintenance. Consequently the possibility of restrictions in respect of size and weight being presently applied has tended to make the motor coach proprietors look ahead and purchase machines to which, in these respects, no reasonable objection can be taken.

Turning to the general question of the use of commercial and public service motors, it should be remarked that from the earliest stages up to the present day the movement in favour of this form of transport has been more widely and more intelligently developed in Great Britain than in any other country. This resulted partly from the fact that the British Isles are densely populated and contain important industrial areas, the needs of which are such as to encourage the development of means of direct haulage for a great variety of loads over comparatively short distances. Transport by railway is at a disadvantage unless distances are considerable, and a wide field has therefore existed in Great Britain for the heavier types of commercial vehicle. Then, again the population of British cities tends to straggle out into suburbs and rural areas. The big retail shops therefore, find it desirable to organise direct deliveries over a radius quite impossible to horsed vehicles. Thus the lighter type of commercial vehicle has found a ready market, and an ample opportunity of proving

its efficiency and eradicating its faults as a consequence of practical experience. In a densely populated country, commercial motor vehicles become rapidly familiar to everyone, and the consequence is that the versatility which they undoubtedly possess is the more promptly appreciated. Comparatively recently the dislocation of railway facilities, occasioned first by the railway strike and then by the national stoppage of work in the coal mines, gave the motor opportunities of showing its power of actually replacing, and not merely supplementing, the services of the railway.

From all these considerations it follows that the British industry is well experienced in the production of goods-carrying vehicles of a great variety of types, dealing with loads which vary from 5 cwt. up to 5 tons or more. It has also brought the motor omnibus and its kindred vehicles, the motor charabanc and coach, up to a high state of perfection. London, with its narrow streets and congested central area, has afforded an ideal testing-ground for the motor omnibus, which it employs in far larger numbers than any other city in the world. In this respect the capital has provided an object lesson which has been appreciated by many other municipalities, so that, in the sphere of passenger carrying, as in the sphere of goods carrying, the British manufacturer has had the advantage of being able to watch and learn from a peculiarly extensive practical road test of his machines. Reference has been made to the adaptability of the commercial motor vehicle. This is illustrated by the success which has attended the construction in British factories of a great variety of special municipal vehicles, motor fire-engines and escapes, ambulances, tower wagons, motor rollers and mowers, and tractors for use on the road and on the land.

The size of London has been an important factor in the development of commercial motor traffic throughout the country, for reasons indicated in a preceding paragraph. London has in particular set a valuable example in the matter of the general adoption of motor omnibus services. The London motor omnibus has to conform to statutory requirements as to weight and dimensions. In the early days it was believed that these requirements did not permit the use of vehicles capable of accommodating more than thirty-four passengers. After the war, however, a type, not exceeding the prescribed weight or dimensions, was devised to carry forty-six people, and even this has now been superseded by a more recent type having accommodation for no less than fifty-four passengers.

Now London has a fleet of fully 3,000 motor omnibuses providing services over 1,600 miles of road, covering an aggregate mileage of over a hundred million car miles in the year, and conveying a total of more than a thousand million passengers.

In other centres, the demand for motor omnibuses has been to some degree stimulated by the fact that tramway systems have been permitted to fall more or less into a state of disrepair. To bring them again to the proper standard would involve an immense capital outlay which municipalities are not prepared to face. The alternatives have been either the replacing of the tram services by the motor omnibus or else the compromise of using trackless trolley cars taking their current from overhead tramway gear, but no longer necessitating the maintenance of tramway tracks. Now that experienced motor manufacturers are interesting themselves seriously in the production of trackless trolley cars, the development of this class of traction, which has hitherto been slow and uncertain, is likely to proceed more rapidly.

In conclusion, mention should perhaps also be made of the varied requirements of municipalities in respect of such services as street cleaning and watering, refuse carting, &c. In this field motor manufacturers have showed great enterprise in producing specialised vehicles capable of fulfilling a great variety of functions and realising on behalf of the ratepayers considerable economies, particularly in respect of the labour charges involved in doing various classes of essential public work.

COMMERCIAL MOTOR VEHICLES

PNEUMATIC TYRES.

By F. LIONEL RAPSON.

Tyre Manufacturer to H.M. The King and H.R.H. The Prince of Wales.

THE tyre which made motoring possible was originally invented by Robert William Thompson in 1845. He was undoubtedly the first and real inventor of what was known as the "air-filled tyre." The real object of his invention was to absorb road shocks, so that instead of the wheel of a vehicle having to ride or surmount, say, a stone, this would be "swallowed" by the tyre and little or no vibration would be transmitted to the vehicle itself.

Thompson actually used words to this effect in his original patent application, and to-day we tyre manufacturers merely repeat his words. The fact that Dunlop re-invented the pneumatic tyre years after Thompson and, by the help of Mr. Du Cros, eventually started what is now a huge organisation, deserves the highest praise, but is no reason why the *real* inventor should be robbed of his rights.

The tyre which made motoring possible has also proved the bugbear of motoring. To-day one can start off for, say, a thousand miles' tour and feel fairly confident of every part of the car standing up to its work with the exception of the tyres. That is why spares are carried. A nail, a broken bottle, a sharp flint, a projecting tram-line point, any of these things are liable to completely destroy a brand new tyre. There are, of course, various makes of tyres on the market which are so constructed that a nail can pass in one side and out of the other without causing any damage, but a huge gash from a broken bottle or tram-line point will finish any make, whether it be unpuncturable or not. With the exception of these things, there is no doubt that the pneumatic tyre of to-day is at least twice as good as it was before the War. No better proof of this can be given than by referring to an official R.A.C. test of tyres which was held at Brooklands Track, where a Racing Lanchester was driven 500 miles in eight hours on tyres that had previously covered 10,000 miles on the road without the slightest trouble of any description being experienced. Prior to this performance 5,000 miles was the greatest distance ever officially run under R.A.C. observation.

To be able to drive for eight hours at over 60 miles per hour on tyres that had previously been subjected to a 10,000 mile R.A.C. grueling would have been considered utterly impossible twelve months ago, and this will give some idea of the tremendous advance which has taken place in that brief period. Hitherto the fabric or canvas tyre has given an average mileage of 2,600. The cord tyre of to-day averages double that mileage, and there are makes on the market which can be relied on to give treble the mileage.

In non-technical language the sole reason why the cord tyre has been adopted by every progressive tyre manufacturer throughout the World, and fabric tyre-making plant scrapped to the extent of millions of pounds, is to eliminate "heat" which is set up in canvas tyres by internal friction. When a tyre is first built up great care is taken to insulate one ply of canvas or cord from the next by means of a thin sheet of rubber. This sheet of rubber also binds the two together, as it is absolutely essential that there should be no separation between plies or between the outer

ply and the tread and wall rubber. It must form one flexible mass. Up to this point the preparation and building of both cord and fabric tyres are substantially similar, but the great difference exists between the two materials themselves. One, the canvas, is woven or interlaced. By this is meant that there is a weft and warp which, when the tyre is flexing, tend to saw one against the other. This sawing action is almost entirely eliminated in the cord type of tyre owing to the cords not being woven or interlaced, but all facing one direction and being joined by a single thread of cotton at intervals, just sufficient to hold them together.

There is no need to go into the intricate details of manufacture, but it is necessary to point out that the final process in tyre-making is to "cook" it. It will be understood that, when the tyre is first built up, the rubber, whilst having passed through certain chemical processes, is still "raw." It is therefore necessary to fix the raw tyre into steel moulds and vulcanise it before it assumes its correct shape and the rubber is suitable for road work, just as a fancy cake must be shaped in a moulded dish and passed through the oven before the shapeless lump of uneatable dough is fit for use. Just as a cake can be undercooked, or overcooked, so can a tyre. It is absolutely essential that the period of vulcanisation, or "cooking," should be timed to a minute. If undercured or "undercooked," the rubber is too soft for road use. If overcured, it has no resilience and will crack and perish very early in life. This illustrates the weakness of the fabric tyre. Having already referred to the sawing action which takes place between the weft and warp and the heat generated by same, it will readily be seen that at high speeds this heat becomes sufficient to carry on the work of vulcanisation. Whilst not sufficient to materially affect the outer wall rubber or tread, it does seriously affect the rubber which is forced into the canvas itself, also the thin sheet which separates one ply from another. The result is that this rubber becomes overcured, turns into a semi-vulcanite and, as the flexing continues, eventually powders. Whilst not "cutting" to the extent of emery powder, this vulcanite powder is sufficiently sharp to help the canvas in its work of chafing, for now that the sheet of insulating rubber has powdered away, one ply is actually rubbing against the next. From the moment that this commences it is only a question of time before the inevitable burst occurs. It will thus be seen that, as there is no weft and warp in the cord tyre to set up this internal friction, the rubber between the strands, plus the insulating sheet of rubber between the plies, remain as rubber during the tyre's life, and experience proves that, providing good materials are used, and the tyre builder is made to do his work thoroughly by a conscientious employer, *who wants his tyres to give 10,000 miles running*, it is a comparatively simple matter to build a trouble-free tyre, in which the risk of burst and puncture is comparatively remote. Even the super-tyre, however, is not immune from being ruined by a broken bottle or tram-line point, and as long as this risk remains, it will be necessary to carry spares.

CYCLES AND MOTOR-CYCLES.

By F. T. BIDLAKE.

FIGURES cannot be found on which to base an accurate comparison between the number of cyclists and motor-cyclists in this country, for although it is known from the registration records that there are nearly 400,000 British motor-cyclists, there is no registration of cyclists, and the guessing at their numbers ranges from four to ten millions, and it is quite hopeless to arrive at a definite arithmetical estimate. One thing is certain, that the cycle is increasingly popular. Cycling has become firmly established, not only as a time-saving device, and an ever-ready method of utilitarian travel, or as ancillary to other games, but it is progressively in favour as a pastime, a recreation, and a sport of a most fascinating type. There are to-day more people riding farther and faster in the great cycle competitions, and more and more who take to the wheel as a pleasurable, easy and healthful recreation whenever spare time or a holiday presents the opportunity for the personal enjoyment of active road riding. It is, moreover, becoming more generally recognised that the possibilities in cycling are of a very wide range. By the choice of a suitable machine cycling may be made available for anybody, however limited their powers. Cycling may be the medium of the most complete athletic exercise, in which a fit man may put forth all his strength, or it may be adapted to the feeblest efforts of a weakling. It even confers mobility on the crippled, and there is no limit to the adaptation of the cycle to the infinite variety of aim, or of capacity, of the self-propelling human unit. In this connection the suiting of a cycle to the rider is very largely a question of choosing a correct gear, and for the non-racing man there is no doubt that the use of variable gear, and the fitting of a free wheel, widens the value of the cycle enormously. The free wheel lets a rider drift at ease down slopes at a speed which he could not conveniently pedal, and the variable gear gives him a way of most suitably applying his power to the very variable resistances to be overcome when the course is not all level, and the wind and weather not always favourable.

The ordinary cycle of to-day is becoming standardized, and the standards set by the chief manufacturers in Nottingham, Coventry, Birmingham, and Wolverhampton have established a world-wide fame for English bicycles. Although it is true that cheap German stuff captures the out-price market in countries like Holland and Sweden, and it is also true that a high tariff bars British bicycles from the United States, and France also finds it suits her policy to combat the introduction of foreign cycles into her dependencies and her home territory, yet the English names have by far the highest reputation. When the superficially imitative Japanese made a bid for the export trade they reproduced the sound of a British name, as well as the appearance of a British machine, and put forth a Ralli, which, though it sounded familiar to the ear, certainly did not reproduce the wearing or the lasting qualities of its prototype. Export business in cycles during the past year, after being exceedingly flat, began to show signs

of revival, as the stocks abroad began at last to become absorbed, and there are brighter prospects for the immediate future, for there is a world-wide movement in the direction of making new and better roads, and there are special signs of increasing possibilities in the Argentine Republic, in Brazil, and a far view can even be taken of ultimate developments of road travel in Mexico, while in Morocco road development has greatly increased the demand for cycles, and in South Africa there is a growing field, and in almost every colony there is road improvement going on, and an increase of cycling necessarily follows, and the British bicycle only needs pushing to prove itself the best.

Cycling, obviously, has its limits, and the man who is prepared to buy power instead of personally produce it is capable of speeds and milages on a motor-cycle that are indeed remarkable. A medium capacity single motor-bicycle has averaged 60 miles per hour for 24 hours, and also motor-cycles have shown their astounding ability to surmount freak hills and travel on apparently unrideable surfaces as well as reach tremendous speeds on first-class roads. In the motor-cycle industry the current tendency is to favour the single motor-cycle of 350 to 500 c.c. capacity, and the motor-cycle with side-car attached, of 750 to 1,000 c.c. There has not been any sign of the small car cutting down the popularity of the motor-cycle and side-car. This type has increased much more than the solo motor-cycle. It has gained at the expense of the single machine, and the small four-wheeled car, although increasingly attractive, is drawing from the class who would otherwise have had a larger car, and is not ousting the passenger-cycle combination. Lightweight motor-cycles are developing in a way that brings them up to the requirements of riders of moderate ambition, when used on reasonably good roads. The endeavour to provide a motor attachment to an ordinary cycle recurs, and offers a compromise, but the cross-bred machine is not very much in favour. It is better to be a cyclist or a motor-cyclist, out and out, and not try to mix the two ideals. Even a lightweight small-power motor-cycle should be capable of doing all the work, and there is no auxiliary motor yet devised for a cyclist to use only when in difficult places. In the motor-cycle industry the position as to imports is quite at variance with that in the cycle trade. The cycle trade many years ago overcame the American invasion and there are no American cycles imported now, nor have there been for more than a decade. There is, however, a very considerable number of American motor-cycles in this country, although it is quite likely that the history of the cycle trade will repeat itself, for there is no evidence of striking superiority in the imported motor-cycles, and they established themselves chiefly at a time when our production was at a standstill. The English makes have held their own in the numerous competitions so largely supported by trade interests, and both at home and in the world-markets there are indications that the British motor-cycle, like the British cycle, need fear no rival.

*"Fear not to touch the best;
The truth shall be thy warrant."*

LEATHER INDUSTRY.

By Dr. J. GORDON PARKER,

Principal of the Leathersellers' Company's Technical College.

THE Leather Trade is in magnitude one of the most important of Great Britain's staple industries, and at the same time the manufacture of leather is one of the most ancient crafts.

The origin of tanning is lost in antiquity, but specimens of leather exist in our museums which were taken from the tombs of the Pharaohs, showing that good leather was manufactured, and even excellently dyed and finished, some four thousand years B.C. Probably no important industry has undergone so little change in the essential principles as the "craft" of leather manufacture or ancient art of tanning. Even in this twentieth century the general outline of tanning is almost identical with that used by our forefathers before the Christian era, in that the basis is the hide or skin, and the tannin ingredient is still obtained from the barks and fruits of trees as of old.

The changes that have taken place in the processes of leather manufacture during the last three decades are not due to any change in the general principles underlying the tanning process, but are due to the discovery of new sources of supply of vegetable tanning materials, many of which grow freely in different parts of the British Empire.

Among the most important of these Empire products are Myrabolams and Dividivi from India and Wattle Bark from Australia and South Africa. Quebracho from the Argentine, Valonia, the acorn cup of the Turkish oak, from Asia and Shumac from Sicily, now play an important part in British leather manufacture.

During the latter part of the last century large factories were erected in close proximity to the forests in France and Austria-Hungary and latterly in America. Vast supplies of oakwood and chestnut wood are dealt with and after aqueous extraction of the tannin principles are converted into concentrated liquors, or solid extract ready for direct use in the tanyards.

The introduction of these extracts and Colonial materials had a marked effect upon the tanning process, reducing the period of time of tannage and effecting a production of leather of equal or even better quality at a lower cost than previously obtained.

Scientists have investigated not only the tanning properties of these new raw materials, and the chemistry of their composition but the principles underlying the tanning processes themselves are now more thoroughly understood with the result that the manufacture of leather is now carried out more scientifically than was previously possible.

Leather manufacturers now understand the peculiar characteristics of each individual material, and as the entire art of tanning high grade leather depends on a knowledge of how to blend the available materials together, and at what stage in the process each should be used in order to get the best results for the various purposes for which the leather produced is to be employed, the tanning process may be said to be more perfectly carried out than was previously possible.

The tanneries in Great Britain are converting over one hundred and fifty thousand hides per week into leather for sole, harness and belting purposes of which number only approximately fifty thousand are obtained from native cattle in this country.

In the light leather industry, excepting for our own supply of our own sheep and calf skins, some millions of skins have to be imported for the manufacture of upper leather for boots, and fancy leather for upholstery, bookbinding pocket-books and other similar articles.

Immediately after the armistice enormous stocks of hides and skins existed in the various markets of the World, and temporarily prices fell below pre-war values. With the increased cost of collection freight and labour charges and the low prices ruling, the collector in many cases was unable to obtain a price for the goods that was sufficient to pay these charges,

and in consequence, thousands of hides and skins have been and are being wasted.

In spite of this the present price of raw material is above the pre-war standard and until considerable reductions take place in cost of labour and transport, the condition is likely to continue, and leather will not come back to its pre-war price.

GLOVE LEATHER.—The glove manufacturers of Great Britain have had a reputation for the production of high-class glove leather of the heavier grade, suitable for the manufacture of men's gloves—this product being made from Cape sheepskins.

In the manufacture of lighter fancy gloving leathers, the manufacturers of this country had not, up to the commencement of the war, been able to compete with Continental importing houses for these more artistic productions. Great headway has to be reported in this branch of the industry. The production of fancy leather for ladies' gloves, both in glace and suede finishes, has made very considerable headway, and these products now compare favourably with the best quality imported leather, and in many cases show considerable improvement.

White "washable" glove leather is a British production which has created a great demand, owing to its property of being washable, which operation can be carried out many times; gloves made from this leather thus being economical in wear.

LEATHER FOR ARTICLES OF WEAR.—During the last year leather has been more generally adopted as an article of personal attire. A large number of ladies' hats are now being made of suede leathers, and this and other leathers are also being employed to a very considerable extent as trimmings for ladies' dresses. One of the most recent innovations has been the manufacture of ladies' jumpers. It would appear that this material dyed in tasteful shades of colour is likely to become fashionable.

LIGHT AND FANCY LEATHER.—The manufacture of leather from the skins of sheep, goat, calf and seal, as used in the fancy leather goods trade, has long been a specialised branch of the leather industry in which Great Britain excels. The tannage of these goods is, in the main, confined to the use of shumac, a tanning material imported from Sicily. This tanning agent is particularly suitable because of its light colour, thereby enabling light and fancy shades to be dyed on the tanned leather, and because of its wearing properties. The British dyer has a reputation for the production of leather which has been coloured in "art" or fashionable shades, and now that British dyes are available in increasing quantities, the trade is rapidly recovering from the set-back which it had during the war period caused by the patriotism of the fancy leather manufacturers employing their energies in the production of boot and equipment leather required by our own and allied armies.

CHROME TANNING.—In 1881 the first patent was taken out for the production of mineral tanned leather by the chrome process. This method, which consists of impregnating the fibres of the raw skin with chromic acid, which is subsequently converted into chromic oxide, results in the production of a leather which, when properly manufactured, is superior in wearing properties to that which is vegetable tanned, and possesses the additional property of being waterproof and of lighter weight, and when manufactured into boot-upper leather, of smarter appearance. The process of chrome tanning is very rapid, it being possible to convert raw pelt into leather in as short a period of time as three to four hours, although a much longer time than this is given in actual practice. Great progress has been made in the chrome tanning industry. British manufacturers were at first slow in taking full advantage of the newer process, but the development of this industry during the war and since the armistice has been such that when the factories at present under construction are completed, the British shoe manufacturer can be practically independent of foreign supplies; whereas six years ago probably 50 per cent. of our requirements were imported.

ARTIFICIAL LIMBS.

THE earliest record of the making of an artificial limb appears in the pages of Herodotus. Hegesistratus, of Elis, having escaped from prison by cutting off his foot "made himself a wooden foot." That was about the fifth century a.c. The curious can see an actual example of an artificial leg made about two centuries later. It was discovered at Capua, in Italy, and is at present in the museum at the Royal College of Surgeons (England). These, however, are only isolated record and example. To what extent the industry of limb-making developed—if it did develop—during many centuries the dust of ages has hidden from us.

The aftermath of war has always been productive of invention. After the close of the Napoleonic campaigns a Berlin dentist brought out an artificial arm which permitted the wearer to flex and extend the fingers—a notable advance. Similarly the Crimean and Italian wars stimulated the inventive faculties of the Frenchman, the Comte de Beaufort, in the development of the leg. The great War left the nations a legacy of thousands of limbless men. In Great Britain alone 41,390 limb amputations have been made. The need has occasioned the evolution of many new types of limbs.

For many years prior to the war wood had been generally held to be the best substance for the making of artificial limbs. But from the days when some sixty years ago the Frenchman Bailly made his first bucket-leg by hollowing out a log of wood to fit a patient's stump, limb-makers had been continuously experimenting with various substitutes. An American maker led the way by contriving a covering of raw hide for the wooden bucket, lessening thereby its tendency to split. Then blocked leather was employed, but before long became discredited with the most competent makers on account of its incurable proneness to lose shape. Non-inflammable celluloid has been tried for light dress arms but has not been much of a success commercially. The supremacy of wood remained undisputed. The technical advisers of the British Government in the early days of the War seemingly accepted this supremacy. Makers of approved patterns developed factories and established workshops. Then came a change. The claims of metal, urged by some makers years before, secured recognition. To-day the Government leg is virtually a metal limb, although wood still enters into its composition. The change has been a serious matter for the makers of wooden limbs. It has brought big losses to many; bankruptcy to some. Not a few authorities now declare that the days of the wooden leg are numbered: that within a decade this branch of the craft will have died of inanition. On the other hand, it is urged that metal has not been exposed to the length and severity of proof to which wood and leather have been subjected. Time and experience will decide. Meanwhile the claims of metal, or more accurately of an alloy, are paramount.

The making of the metal limb marks a break, as it were, in the evolution of the anatomical mechanician's craft. For all its nicely contrived joints and sinews the wooden leg proceeds straight from the simple stick: the metal limb proclaims the consummation of a new idea. One can guess pretty accurately at its germination. For years the aim of the enterprising limb-maker had been to make lighter and lighter legs. But always in striving to avoid the Scylla of weight he had been beset by the Charybdis of weakness. In a word, there was a certain gauge of wood below which he dared not venture. The first essays in metal were with zinc, sheet-steel, and later, aluminium. But, for one reason or another, the experimenters secured little market for their wares. One objection in particular was urged—they were noisy. The alloy which is held by many to have solved the twin difficulties of weakness and weight is duralumin. The invention of this alloy stands to the credit of Messrs. Vickers-Maxim, who supply customers direct. It does not lend itself particularly well to moulding, because its peculiar value consists in a careful proportionment of constituent parts a proportionment which heat, above a certain temperature, would irreversibly disturb. The metal, therefore, has to be hammered or pressed

into shape. For this reason among others the craftsman who has learned to work in wood has to make practically a fresh start when he changes his medium.

The use of duralumin for the manufacture of artificial limbs was the result of a combination of mechanical ingenuity and personal need. Once again was necessity the mother of invention. It was in this way. A certain man, skilled in engineering, had the misfortune to lose his leg. In due course he had a wooden substitute fitted, but he was oppressed with the heavy load he seemed destined to drag through life. He tried various makes but with unvarying dissatisfaction. He happened to be acquainted with the properties of duralumin and he became convinced that here was the ideal material for an artificial leg. After many experiments he turned out a leg which proved a great advance on any he had hitherto worn, from the point of view of weight. His experience opened up a field which some highly-skilled limb-makers have not been slow to explore and develop. As regards lightness the superiority of the duralumin limb cannot be questioned. A wooden below-knee leg ranges from four and a half to nine pounds: the lightest leg made of the alloy weighs little more than three pounds, and an above-knee leg will scarcely turn the scale at three and a half pounds.

The foot is still made of wood. By this means the chief objection which was once advanced with regard to metal, is removed. The wearer of a metal leg does not announce his coming in sonorous tones. Further, the use of wood for the foot makes easier the fitting of a jointed ankle. The advent of the metal leg has solved, too, the problem of immersion. A type is made which the bather can, if he choose, wear instead of leaving it hanging on a peg in the bathing machine or propped up against a rock. Other types of leg are made which enable the wearer to simulate most of the actions of the natural leg.

Although the actual weight of a limb is an important consideration, even more important is the proper distribution of the weight. Fit is another vital factor. The crudest leg with a well-fitting socket and well-aligned is preferable to an elaborate one ill-fitted and badly balanced.

The arm dates from a much later period than the leg. The earliest known example is in the Nuremberg Museum, and was worn by Götz von Berlichingen early in the sixteenth century. It is made of metal and has articulated fingers.

Wood, leather, celluloid and fibre, certus glue and fabric (known as certalmid) and duralumin are freely employed. Artificial arms and hands present greater difficulties to the maker than legs. The upper limbs are more delicate and complicated organs than the lower. Intricate mechanical devices necessitate the use of metal. The automatic and flexing wrist the positive grip of the fingers, which can be actuated at will by the movement of the shoulder. In amputations above the elbow flexing and locking of the elbow joint is provided for as follows:—A tendon, usually of gut, is attached to the forearm. This tendon passes over a pulley in the elbow-piece, and is attached at the back of the shoulders to straps. Another strap passes across the chest, by the expansion and contraction of which the locking device is operated. By a slight movement of the shoulder-joint the tendon can be extended and the elbow-joint flexed.

The maker of the artificial hand can scarcely claim for it more than that it masks a mutilation. The intricate mechanism and multiplicity of muscles in the natural hand have so far eluded the reproductive skill of the most ingenious craftsman. Centuries of experiment have not carried us far. The most elaborate make provides for no more than a simple grasp and movement of thumb and fingers. For practical purposes the artificial hand is discarded and instruments worn which are devised to meet particular needs. Hands are most commonly made of lime wood and fully articulated, but are entirely for show. Other types are made which are of more practical value. One type provides automatic flexed fingers, by means of which the wearer can carry, say, a bag weighing upwards of ten pounds.

THE TOBACCO INDUSTRY.

IN 1492, Christopher Columbus, in eager pursuit of knowledge of the hinterland of the new territories whose coasts he had been the first to reach, sent out a party of men from his ships to explore Cuba. The little expedition made a great discovery. They found tobacco. The first European consignments of the herb reached Spain in 1558, and in 1586 Ralph Lane, the first Governor of Virginia, and Sir Francis Drake introduced it into England, leading the way for the establishment of a British industry the history of which has been one of continuous and uninterrupted development. Of the about fifty known species of *nicotiana* nearly all are natives of America, than which few others are of economic importance. The great bulk of the world's tobacco supply is derived from *nicotiana tabacum*, the Virginia tobacco, originating in some part of Central or South America, now cultivated in many other regions. The growths of Cuba, the United States, the Philippines, and Latakia, are derivatives from this species, which is also extensively cultivated in India. *Nicotiana persica*, the source of the renowned Shiraz tobacco of Persia, appears to be only another variety of the same stock, and to have been introduced from America. East Indian (green) tobacco is the product of a different species—*nicotiana rustica*, an indigenous Mexican plant, which thrives in Southern Germany and Hungary.

Tobacco is cultivable in numerous diverse climatic conditions and varieties of soil, but in quality and flavour is radically affected by the locality and circumstance of its growth, its characteristics being influenced by very slight differences of climate. It will grow wherever climatic conditions are congenial, but the type of its product is chiefly dependent on the nature of the soil. Experience proves that only practical experiment can determine where it can be cultivated to advantage.

Supplies from America exceed those from the whole of Asia, and the latter exceed those from the whole of Europe; Africa coming in a long way last. As regards sources of supply within the British Empire, for local consumption tobacco is cultivated in many parts of India, and on a commercial scale chiefly in the Presidencies of Bombay and Madras and in the Punjab; Northern Ceylon yields a kind unacceptable on European markets; British North Borneo competes with Sumatra in the matter of a leaf in especial favour with cigar makers; British African yields are much more considerable than those of Australia; in the West Indies, only in Jamaica have operations the status of an industry. Some success has rewarded recent attempts to make cultivation in several English counties, and in Ireland, a practical proposition.

Grown under differing conditions in so many places, methods of cultivation and preparation

vary, most interest attaching to those in use on the plantations of the United States. Here the seeds (so minute that between 300,000 and 400,000 only weigh a single ounce) are sown in specially prepared nursery beds, from which, after about 60 days, the young plants are removed to be set out in fields, from 10,000 to more than 11,500 of them to one acre. About 95 days after transplantation, the crop is ripe, the computation being that on average about 40,000 plants reach a healthy maturity from every ounce of seed. The drying of the gathered leaves can be effected by exposure to the sun, a similar method being air-drying; but the usual and quicker agency is a fire-heated temperature. During the fermentation that is set up after the dried leaves are stacked, pains are essential to ensure its uniform distribution.

Tobacco reaches the British manufacturer in the form of bunches of tightly-compressed leaves, which are separated, damped and re-dried. Careful division into grades and classes and skilful blending precede conversion into pipe tobacco, cigarette tobacco and cigarettes, and into cigars. It is in relation to the British cigar that the British Tobacco Industry of to-day has made an advance of especial interest. Although the home manufacture of this article dates back to 1790, it has only now reached perfection, a specific incentive encouraging a sudden development. The imposition on Havana cigars of an ad valorem duty of 50 per cent., in addition to existing duties, so raised their price to the consumer that, except to the few, they became a prohibited luxury. British makers appreciated their opportunity and took advantage of it. Securing consignments of the choice leaves jealously reserved for so long by the foreign grower for his own use as "wrappers," their one serious obstacle was removed, with the result that they now produce a British-manufactured cigar that, in every essential quality and attribute, claims to be indistinguishable from the imported cigar of high rank, though the latter costs its smoker so very much more. The secret of the success of the at-last perfected British cigar is in the blending of the flavours and other characteristics of selected tobaccos from various sources, the principal being Havana, Borneo and Java.

The making of a cigar is a simple process to witness, but calls for the exercise of such nicety of judgment and delicacy and dexterity of touch that the operators in reputable factories are men who have served an apprenticeship of five years. The "fillers" that compose the core are of a corresponding quality with the shaped leaf that covers them, technically the "binder," the outer covering round which is the "wrapper." On the quality of this the quality of the finished whole finally depends—hence the reservation for the indicated purpose of the choicest leaves the world can produce. In one respect the smoker of British manufactured tobacco in any of its forms has a guarantee that does not apply to tobacco of foreign manufacture, in the damping of which water is allowed to be "sauced" with mixtures that include such adulterants as common salt and saltpetre; whereas here the law prevents anything being added to pure water.

SEEDS INDUSTRY.

THE culture of seeds is an industry of both vital national concern and of individual interest. In one ramification or another it is a factor in the life of each and the lives of all. On an adequate and well-conditioned supply of agricultural and vegetable seeds depends the adequate and healthy supply of essential foods; thanks alone to the availability of flower seeds any man, however poor, can grow his own little Eden; by grass seeds bare wastes are transformed into green pastures rich with sustenance, lawns that delight the eye are created and maintained, spaces are carpeted that serve the ends of pleasant recreation and beneficial exercise. Royal appreciation of the importance of the subject under brief review has been twice signified in our time, the visit of their Majesties King George and Queen Mary to the Royal Seed Establishment at Reading in 1918 having been preceded by a visit there of his august father when Prince of Wales; the public interest these visits aroused reflecting the interest in seed culture of all classes of the community.

For long the commerce in seeds lacked system and organisation, and many abuses flourished. Adulteration was the rule. Mechanical means were in use for killing the vitality of cheap seeds without affecting their appearance, guarantees being offered by the owners of the mechanisms that not a single seed subjected to the process could by subsequent germination betray the fraud in which it was to be an item. These killed cheap seeds were mixed and sold with dear seeds of a different species but of similar form and colour. For instance, killed rape at threepence a pound was mixed with cabbage, broccoli and other round seeds worth many shillings a pound. In the early years of last century the scandal of this and other malpractices became so great that an agitation was set afoot which resulted in a commission of inquiry, and ultimately to the passing of the Seeds Adulteration Act.

If genius be an infinite capacity for taking pains, seed culturers on a commercial scale are a race of geniuses, for in almost every detail of their work at its every stage meticulous care must be exercised, in conjunction with exhaustive knowledge and experienced judgment, which without painstaking would be wasted. They have to deal with numerous species and innumerable varieties of each. To illustrate the multiplicity of varieties in floriculture alone, of asters there are more than two hundred, of stocks almost as many, and of sweet peas at least one hundred and seventy, other species being equally diversified. This prodigality of variation is by no means confined to flower species. The ordinary person knows of only

one sort of blackberry—some few years ago four hundred *new* varieties were discovered in China. It is not worthy that the tendency of varieties to revert to their original type, which all breeders of live-stock have observed, is equally persistent in the vegetable kingdom. The fertile seed of a variety germinates to species, but not with any degree of certainty to its own variety of that species. The peculiarities of varieties are perpetuated by other means.

In such qualities and characteristics as the longevity of their vitality, the duration of the period of germination, and their hardihood (there are some not injuriously affected by either boiling or freezing) the seeds of different species are in extreme contrast, but the conditions required for germination are in principle the same—exposure to moisture and a certain quantity of heat, communication with the atmosphere being also necessary for the maintenance of a healthy state. A seed, when fully ripe, contains a larger proportion of carbon than any other living part, and so long as it is thus charged with carbon it cannot grow. The only means of ridding itself of this element, essential to its preservation but an impediment to its development, is in the conversion of the carbon into carbonic acid, for which a supply of oxygen is necessary. This it procures from the water absorbed in germination, fixing hydrogen, the other element of water, in its tissue. With the carbonic acid thus formed it parts by means of its respiratory organs, until the proportion of fixed carbon is lowered to the amount suited to its growth.

The typical Seed Establishment of to-day is a colony of experts. Growing on their own lands for the sake and purpose of seed harvesting, the cultivators are sponsors for their produce when it passes into the hands of growers for other purposes. Farm seeds, grass seeds, garden and kitchen garden seeds must all be tested, the unfit and the unlikely be eliminated; means must be taken to preserve pedigree stocks from extinction or decadence. All this entails scientific, costly and elaborate equipments in some departments and an unerring discrimination and ceaseless watchfulness in all.

Since the reform and consolidation of the seed industry more than a hundred years ago, its history has been one of continuous extension and development. It has been, and is, importantly influential in advancing British interests at home and overseas, its export returns running into big figures, even in this age of big figures. British-grown seeds are in preferential demand all over the world. A feature of the trade is that the smallest customer may buy direct from the largest producers.

THE PIANO AND GRAMOPHONE INDUSTRY.

WHILST the following notes relate more especially to the piano and its up-to-date prototype, the player-piano, they are also applicable to the gramophone which, not wholly without justification so far as the better types are concerned, has acquired the status of a musical instrument, and cannot be separated from any review of the musical instrument industry.

The past two years have probably been the most difficult period which the British musical instrument trade has ever been called upon to face, and records at least the failure of one eminent house.

That this depression has been less due to conditions peculiar to the trade than to those which equally affected other British industries is the only satisfactory feature to record. Summarised, these conditions have been:—

- (1) Limitation of home demand as a result of excessive taxation.
- (2) Heavy decreases in values of stock.
- (3) Inability, mainly due to exchange disparities, to trade in the foreign markets.
- (4) German competition.

The latter is placed last because, whilst the threat of German competition bulks largely in the popular eye, it has yet to be demonstrated that, save in the cheapest grade of goods, the German makers can redress the disadvantages of the present tariff and at the same time give a greater value than the British maker. For them to do so will become increasingly difficult as the value of their currency tends to rise.

Labour conditions have become more satisfactory, the Trade Unions concerned wisely acquiescing in the reduction of a

wage which was severely hampering the trade. Due to this and other reasons, prices fell considerably during 1922, and to-day may be regarded as having become stabilized, an important consideration for the purchaser.

During the past year a most important development has occurred in connection with the player-piano. Emanating from America, but delayed in this country by the war, the reproducing piano has practically superseded the earlier and more mechanical type of instrument, whilst offering the same facilities for playing by hand and by music-roll as the player piano. This instrument also exactly reproduces the characteristic playing of the most eminent pianists. Its powers were strikingly evinced at a concert held last October at Queen's Hall, where a reproducing model of the "Pianola" Piano, accompanied by the Queen's Hall Orchestra, under the direction of Sir Henry J. Wood, played Harold Bauer's interpretation of Saint-Saëns Pianoforte Concerto in G minor, and subsequently accompanied Miss Carrie Tubb in several vocal numbers and William Murdoch in a pianoforte duet. It seems likely that in course of time this instrument is destined to replace both the piano and player-piano.

The gramophone has benefited by the great amount of research work devoted to sound reproduction in recent years, and whilst its evolution may not yet be so complete as that of the piano, an extraordinary degree of excellence has been reached in the best makes. 1922 saw considerable strides in recording, largely due to the entry into this industry of one of the leading British musical houses; it is widely claimed that their product marks a great artistic advance.

At the striking of the first chord

on a Weber Piano you realise why it has been chosen by the world's first professional pianists in preference to all other makes.

The Weber Piano

has a grandeur and sonority of bass tones, a crystalline purity and brilliance in the upper registers, and delicacy and responsiveness of touch that delight every pianist who plays it.

Also obtainable in combination with the 'Pianola' Piano
(Duo-Act Reproducing Model).

THE AEOLIAN COMPANY, LIMITED,
AEOLIAN HALL, 131/7, NEW BOND STREET, W. 1.

The AEOLIAN 'VOCALION'

The perfect gramophone that you can play.

Silvery tones, golden tones, velvet tones, ring from the throat of the Aeolian 'Vocalion'—limpid, pure—truest replicas of the glorious sounds that left their images graven upon the record.

All 'Vocalions' are equipped with the 'Graduola,' giving a most delicate and artistic control of tone. The 'Graduola' is one of the most vital inventions in the history of the gramophone. It makes these great modern musical instruments a practical medium for personal musical expression.

The Perfect Combination — The 'Aeolian Vocalion' and the 'Vocalion' (true to life) Record.

Ask to hear them in our Showrooms.

THE AEOLIAN COMPANY, LIMITED.
AEOLIAN HALL, NEW BOND STREET, LONDON, W. 1.

THE BISCUIT INDUSTRY.

"BISCUIT" being, lexicographically, dough twice baked, the making of biscuits is—in the indicated sense—probably older than civilisation, but as applied to the modern commodity with which we feed ourselves and the world the word itself is by way of being a misnomer, for only one of the article's very numerous varieties—the rusk—goes a second time into the oven. The cracknel, however, is twice "cooked," being boiled before it is baked; and the cracknel is the oldest biscuit known by a distinctive name. It is mentioned in 1 Kings, xiv. 3: "and take with thee ten loaves and cracknels." Biscuits have always been made, but it was only their comparatively recent manufacture by machinery that elevated biscuit making to the status of a great industry. It is an industry in which British supremacy is undisputed and indisputable. We make far more, and incomparably better, than any other country. The British biscuit is ubiquitous. A curious instance of its "peaceful penetration" into the least likely regions was mentioned by the commander of the British troops who entered Lhasa in 1904. In this sealed city of Tibet (in which, it is said, only one white man had ever been before) he was offered a biscuit made in Reading—where is situated the first-built and largest biscuit factory in the world; this ancient English town having been selected as its location partly because of its nearness to the finest and most suitable wheat-growing areas.

The magnitude of the modern British Industry of biscuit manufacture represents, as already implied, an instance of rapid development, for its beginning synchronised with the cheapening in price and increase in quantity of flour and sugar that resulted from legislative action and other causes not longer ago than some eighty years, the invention and adoption of scientific mechanism being co-incidental. The primitive methods this mechanism superseded would generations ago have proved hopelessly inadequate; and to reflect on what a comparatively biscuitless England would now mean to us is to realise that of a truth the pioneer of the new system did "the State some service": to draw imaginary lines from the site of the works he established to the overseas sources from which they are to-day supplied with rice, mace, currants, sultanas and other fruits, almonds, nuts, spices, gingers—not to enumerate other ingredients of utility and luxury which enter into the composition of some of the products of any typical biscuit factory to-day, the making of cakes usually being combined with the making of biscuits—is to realise that the trade has played an important part in the promotion and consolidation of British commercial interests in our colonies and protectorates and in every civilised country; while at home it has permanently and expansively enlarged the market for British flour, British dairy produce and British eggs, increasing in addition the demand for timber and metal for the construction of packing-cases and tins, and of other goods for divers purposes.

Detailed statistical particulars would be bewildering rather than enlightening where so many items are involved, but the following facts will be sufficiently suggestive. The returns of the Great Western, London and South-Western,

and South-Eastern Railways show that the output of biscuits and cakes from one factory alone, and the delivery of materials for their manufacture, require annually more than 62,000 railway trucks.

In the beginning the export trade in biscuits owed much to the great Crystal Palace Exhibition of 1851, which was a means of spreading the knowledge of the proved superiority of the British comestible. Similar results followed other International Exhibitions—notably the Great Paris Exhibition of 1878.

To witness the process of manufacture in an English factory of the first class is to discern why the British biscuit has won the reputation it can never lose while those processes are conducted as they always have been and are to-day. In themselves, accomplished by the operation of the most ingenious machinery, supplemented by the labour of thousands of skilled hands, they are simple, but at every stage of each the most meticulous care is exercised, the most elaborate pains are taken to ensure that each finished article is individually flawless and faultless. The absence of any adulterant is not enough—every ingredient, separately examined, scrupulously tested, must be not only good but the best, not only pure but the purest, and free from acquired as well as native defect. As illustrative of the precautions taken, two examples will serve. The scrutiny of currants is so close that each currant out of millions of currants comes under it, and the methods by which they are cleansed and freed from even the tiniest of stalks, and the smallest specks of dirt and dust, occupy 36 hours. Each egg out of millions of eggs is twice tested—first by electric light, unbroken, and then after it is broken. In composition, taste, size, shape and price the differences are many and great, but in the preparation of all descriptions, and in every department, the same rigidity of principle is strictly observed.

This high standard was originally set by the first firm to transform biscuit making from a casual occupation into an organised manufacturing enterprise of national and international service and importance. Consistently adhered to, it has become the accepted standard, and helped to put a reality of meaning into the familiar phrase "British and best."

It remains to refer to the dietetic value of the biscuit, which is greatly enhanced by the variety of its classifications. It is at once a food and a delicacy, a meal and a tit-bit, and in at least one form has medicinal virtues. It satisfies the hunger of the robust and tempts the appetite of the sick and convalescent. From the commissariat of no expedition is it ever omitted—it has helped to sustain life in Arctic cold and Tropic heat. During the Great War vast quantities were especially made for our soldiers on all the fronts and our sailors on all the seas. It is nourishment in the handiest and most portable of forms, and differs from many concentrated foods in that each one of its constituents has a dietetic value of its own, besides the value of them all in combination.

Although the ship or cabin biscuit is no longer the necessity that it used to be, no vessel ever sets sail biscuitless. It is a truism that trade follows the flag: the British biscuit goes with it.

BY APPOINTMENT

IN the science of economy there is an axiom that the best is the cheapest.

☞ Huntley & Palmers biscuits cost you no more than inferior kinds, yet their superiority is beyond all question.

☞ They are manufactured of only the purest materials, under conditions of most exceptional cleanliness, in buildings which are models of sanitation.

☞ By these methods, practised consistently for over ninety years, Huntley & Palmers have won their great reputation.

☞ The millions who, in every quarter of the world, daily enjoy Huntley & Palmers biscuits need fear no modification of their quality.

☞ Those who have yet to try them may do so with confidence.

Huntley & Palmers Ltd.

THE BRITISH PENCIL INDUSTRY.

By G. H. MEADMORE.

THE manufacture of lead pencils in similar form to the familiar article of to-day dates from a period immediately following the discovery of the once famous Borrowdale mine, situated a few miles from Keswick, in Cumberland, in the year 1564. At a much earlier period metallic lead was used for marking on parchment, paper or other material, and it is doubtless owing to the earlier use of this substance that the erroneous term "black lead" has been applied to plumbago or graphite.

The history of the lead pencil for nearly three centuries is closely associated with the fortunes of this mine, and it is probable that in no other part of the world has similar graphite been found equal to that found there. Analyses, however, which have been taken of the Borrowdale graphite show that it was not of exceptional purity, but it was the physical condition in which it occurred that gave it its value for pencils. The product was in such great demand and was so closely maintained as a monopoly, that, in pursuance of an Act of Parliament, the mouth of the mine was guarded by an armed force, and to maintain the monopoly and conserve the supply, the mine was only worked during six weeks in each year. To prevent pilfering, the mine was closed by flooding. The graphite was sold by public auction in London, and for many years the Cumberland mines were probably the only source of supply for pencil making. The graphite was used in its natural state, being cut or sawn into rectangular sticks and enclosed in their wooden casing. This method was not economic and towards the close of the 18th century, when the deposits began to show signs of exhaustion, and also during the early part of the 19th century, efforts were made to discover a means by which the waste which had accumulated in the factories and the residue from the mine could be utilised. Pulverisation, with the addition of a binding medium such as glue, isinglass, or gum, was tried, but without marked success, and was eventually abandoned in favour of the process originated by Conté, a French chemist, in 1795. By this process finely-ground graphite is mixed with clay, formed into strips, and baked. This invention marks the most important step in the manufacture of the modern pencil, and is the process now in universal use.

Graphite, of which there are two distinct types, viz., foliate or crystalline, and compact or amorphous, has since been found in many parts of the world, but that mostly used by the pencil manufacturer comes from Mexico. Foliate graphite is difficult to grind to the required fineness, and is less brilliant in colour than the amorphous, which, on the other hand, can be ground to a gritless fineness, and is of a nature which combines readily with other materials.

The manufacture of modern pencils requires great technical knowledge, combined with practical experience, and involves a large number of operations. The graphite, which has already been prepared at the mines, is mixed with clay in a dry state, then moistened and milled to the requisite fineness. Filter presses free the "batch" from an excess of moisture, and it then passes through a series of compressors, from the last of which it is extruded through a hole or holes slightly larger than the actual thickness required, to allow for shrinkage, and the "strip" is thus formed. At this stage it

is in plastic form. It is laid out in trays, in lengths of about 22 ins., and after drying is ready for baking. The degrees of hardness are primarily obtained by varying the proportions of clay and graphite.

Nearly all high-grade pencils are made of cedar wood, which, owing to its softness, straight grain, and freedom from knots, make it peculiarly adapted for this purpose. The red cedar, or pencil cedar, belongs to the juniper family, being the *Juniperus virginiana*, which is found at its best in the south-eastern States of the U.S.A. The wood is usually imported in the form of "slats," i.e., strips about 7½ ins. long, 3-16ths in. thick, and from 2 ply to 6 ply in width, 6 ply being the width of 6 pencils. The slats are grooved, coated with glue, and the lead strips inserted. Two slats, one of which contains the strips, are glued together, and the blocks thus formed are fed into the shaping machine. This machine cuts a series of semi-circular grooves on each side of the blocks, converting them into shaped pencils. The pencils have then to be sand-papered, coloured and polished, the ends cleaned, and finally stamped and bronzed.

The raw materials employed in the manufacture of coloured pencils are clay, wax, and a colouring agent, but the clay is of a softer nature than that used for black pencils. Bohemian clay having this requisite property, has in the past been greatly favoured for this purpose, but clay eminently suitable for the purpose exists, however, in the United Kingdom, and British aniline dye suitable for the production of copying ink pencils is now obtainable. As a result of careful research work the technical difficulties in regard to the manufacture of coloured "strip" have been surmounted, and to-day British copying ink and coloured pencils, of high grade, including dermatograph pencils for surgical purposes, and pencils for marking on china and glass, are being produced.

The Pencil and Colour Industries are closely allied, the pencil manufacturer being dependent on the dye manufacturer for colours, often specially produced, and it is this connection which largely contributed towards the pencil industry being so successful in Germany. British manufacturers were obviously well equipped in other respects and a comparison between British and Continental productions a few years ago would have shown that where any difference existed in favour of foreign productions it was primarily the finish due to colour.

This handicap no longer exists as during the war the United Kingdom was forced to depend to a greater extent on its own resources and one of the greatest industrial developments was in connection with the dye industry which was subsequently able to meet the requirements of the pencil industry. In addition, owing to the increased demand, additional machinery was installed which realised a considerable increase of output, and a noteworthy event was the amalgamation of two important and old established manufacturers, whose combined resources, experience of manufacture and individual research work, should be of the greatest benefit to the industry.

The industry has rapidly developed from an old established but comparatively small industry into one of considerable importance amongst the many important industries of the United Kingdom, and as a result of the higher standard of production and finish has now no fear of Continental competition.

The export trade in lead pencils, was however, at one time practically lost owing to the abnormal home demand, but in spite of the difficulties common to most industries to re-establish trade in export markets, United Kingdom manufacturers have more than regained their former trade both in the British Empire and in foreign countries.

THE CHEMICAL HAND FIRE EXTINGUISHER.

AS far back as it has been possible to trace, the possession of fire and the art of making it have belonged to the vast majority of mankind. Its utility has been appreciated and extended all through the ages until it has become an indispensable part of existence. Its danger when uncontrolled was recognised in very early days, and organised efforts made to combat the evil. Trained men with more or less efficient means of throwing water or other liquids to a distance were fully organised in Roman and pre-Roman times. These organised fire-extinguishing bands have developed into our modern Fire Brigades with their magnificent equipment. The need of such organised efforts has been illustrated again and again by conflagrations which have caused wide-spread disaster. In the classics we have the burning of Troy and Carthage, and the famous satisfaction of the Emperor Nero's madness in the destruction of Rome. Later, we read of great fires in London in the eleventh and thirteenth centuries, and the Great Fire of 1666. In 1812 Moscow was burned, the loss amounting to £30,600,000. In 1871 the Communist outrages caused losses to the extent of £32,000,000, in the same year the loss through the Chicago fire amounted to £39,000,000, and some thirty years later this town lost 600 lives in a fire at the Iroquois Theatre. The year following, Baltimore and Toronto suffered terrible losses through fire. These are a few of the startling catastrophes which shock humanity. If the daily loss of life and property resulting from fire could be presented in total figures for one year, it is highly probable the shock would be equally great. At a recent conference of the Professional Fire Brigades' Association, a Chief Officer remarked that it was not generally recognised to how great a total the fire losses in Great Britain amounted. During the year 1921 the financial forfeit was about £10,000,000, and an insurance did not cover it. He emphasised the fact of the national importance of efficiency in connection with fire-fighting and preventive devices, and that such efficiency demanded that a fire should be put out, not washed out, and that the least possible amount of water damage should be incurred. He further stated that the country could not afford the huge losses at present sustained.

Although a fire affects a certain number of individuals directly, it is bound to affect a very large number indirectly in numerous ways which are apparent when a little thought is given to the subject. Outbreaks of fire cannot be absolutely prevented, although every possible care may be taken. The causes are too numerous and often beyond human control. Therefore the only remedy is to fight the fire in the earliest possible stages by means which will overcome it with the minimum amount of water damage. To this end the Chemical Hand Fire Extinguisher has been brought into existence. The majority of these are based on the principle of the formation of gas as the result of the combination of chemicals, i.e., the production of CO_2 as the result of a mixture of acid and alkali, thus propelling the jet of chemical a serviceable distance, and at the same time, as water is capable of absorbing large quantities of Carbonic Acid Gas, it is carried in the water

to the seat of the fire, and the evaporation of the water liberates the gas. This gas is the enemy of all kinds of combustion, and therefore forms the main factor in the extinguishment of the fire. This principle has been presented in various forms by firms who have realized the possibilities of sales. The foregoing remarks prove the necessity of Fire Protection, but frequently it is not recognised until too late, —insurance is applied for and paid according to policy; re-organisation is started, premises rebuilt and customers re-canvassed—the latter may or may not return to the victim of the fire. Insurance should in no circumstances be depreciated, but it forms very inadequate compensation for the immense amount of worry, loss of trade and loss of treasures incurred, apart from the fact that life may be endangered. When considering a matter with so grave issues at stake, it is essential that the precautions adopted should be adequate to meet requirements in all respects. One of the most vital points to be considered is whether the appliance installed will be found to be effective and in order years hence, as of course it may be many years before the appliance be used. A machine which has deteriorated, or in which the mechanism refuses to act, is worse than useless, as valuable time is wasted in trying to use it. It is also essential that the appliance can be set in action instantly, without the reading of lengthy instructions, thus avoiding loss of time, and enabling the uninitiated to set the appliance in action. Its weight and construction should enable it to be used by one man alone, and where necessary, a size within the capabilities of a woman or even child should be installed. It is a great advantage if the appliance can be used with one hand alone, and of course this cannot be done when a hose is attached to the appliance. A conical appliance, provided the exit is at the apex and the handle is correctly placed, can with the greatest ease be directed where required. A brief examination would satisfy one regarding some of the above necessary qualifications, and a test fire would show whether or not the extinguisher could put out a fire, but this would be no guarantee that the extinguisher would be equally efficient years hence and in the hands of an inexperienced person. The only guarantee which can be accepted with absolute confidence is the actual use of the fire extinguisher after it has been hanging up filled for years and then used by one without instruction. Any firm which makes a claim that its appliance will not deteriorate should be able to produce such evidence from their customers.

As fires give no warning, and have been known to occur on the same premises within a few hours interval, a system of fire protection which is always ready is essential. Therefore it follows that a fire extinguisher must be capable of being easily and quickly refilled, and spare refills should always be at hand. In selecting an appliance it is advisable to give preference to the one that carries with it a continuous system, under the terms of which refills are supplied free after each actual outbreak of fire, appliances are periodically inspected and advice given by experts when desired, provided the above mentioned qualifications are also included.

"MINIMAX"

Chemical Hand

FIRE EXTINGUISHER

Reduces damage by Fire to the minimum.

The liquid ejected from the appliance is equal in effect to many times its volume of water.

Its instantaneous action, simplicity, construction and weight enable it to be set in action without waste of time.

Non-deterioration of contents and absence of complicated mechanism render it always ready, even years after installation.

Proofs of above.

"Minimax" has been used on over 56,000 actual outbreaks of Fire, and our testimonials show ample proof that "Minimax" fulfils all our claims. Our sales, having passed the million, add further testimony.

OUR SYSTEM.

We do not merely sell an appliance but a **continuous system** of **Fire Protection**, as we supply **Free Refills** after each fire, periodically inspect all appliances installed by us, and give free advice when required through our experts.

LETTERPRESS PRINTING.

By J. R. RIDDELL, Principal, London School of Printing.

LETTERPRESS printing, the Craft which turned the darkness of the Middle Ages into light and secured the intellectual achievements of the past, and also furnished a sure guarantee of the future, is the art of obtaining impressions from relief surfaces, such as type and engraved blocks.

It is claimed that the earliest attempts at printing were made in China before the Christian era. It is known that printing from engraved blocks and movable characters was practised in the Celestial Kingdom in the eleventh century, when a smith named Pi Shing made movable types, but the large number of characters in the Chinese alphabet made the invention practically useless. Books printed from blocks were published in China and Korea as early as 922; these are said to be still in existence. In the British Museum there is a copy of a Chinese Encyclopedia printed from movable types in the year 1597.

There is no actual certainty of the date of the invention of printing from movable types, but it is assumed it took place about 1440. Certain "Letters of Indulgence" are the first known documents to have been printed by this method. These were issued from a press at Mainz and bear the date 1454.

The first book printed in English was "The Recuyell of the Histories of Troye" partly printed at Bruges about 1475, by William Caxton, the first English printer, who set up his Press at Westminster in 1476.

The art of producing metal types is a very exacting one, calling for great accuracy and skill, not only in the designing of the letters and cutting of the punches, but also in the casting of the individual letter. The unit of type measurement is a "point," twelve of which equal "a pica em," or the sixth of an inch. The height of type is 0.918 in., or approximately the diameter of a shilling. "Points of type," which are of varying weights and sizes, are supplied to the printer in recognised proportions of characters, i.e., letters, signs, spaces, and are based on the number of "A's" in the found.

In the actual production of letterpress printing, there are two main operations, the setting up of the type by the compositor, and the printing of the type on the sheet of paper by the pressman, or machine manager.

COMPOSING.

In hand composition the compositor stands in front of a frame on which is placed a tray, called a "case"; this is divided into a number of compartments or "boxes" of varying sizes, each of which contains either a number of one particular letter of the alphabet, or punctuation marks, signs, figures, spaces, &c. These letters are picked up from the case by the compositor with the thumb and forefinger of the right hand and placed in a metal tool called a "composing stick" held in the left hand, and from which the letters, in the form of lines, are taken and placed upon a long shallow tray with flanges, called a "galley." The spaces, shaped like type but somewhat shorter, are placed between words. The lines of movable type are ultimately made up into pages of a book of a particular size and placed inside a steel frame called a "chase," and the type "locked up"—i.e., made portable by means of a system of wedges making the forme of type suitable for printing from on a machine.

Between the setting up of type and the actual printing, there are several important operations to be performed, such as reading—a most responsible task the reader's position usually being held by a man of wide learning and practical experience. There are also the making and revising of the reader's and author's corrections, and finally the arranging or "imposing" of the pages in such a way that when the sheet is printed on both sides and folded, the pages will fall in proper sequence and with correct margins.

After the number of copies required has been printed, the type is "distributed"—i.e., each letter or space is put back into its respective box by the compositor so that the "case" may be used over again. In this work great care has to be exercised to prevent the letters getting into the wrong boxes, or, as the printer would say, "pling" the case.

We live in a mechanical age, and mechanical science has made great advances in connection with Printing during the past 50 years. In setting up "solid matter," such as newspapers and books, composing machines are used to a large extent. Of these there are various styles which can be divided into two classes; those which cast a solid line of type, called a "slug," and those which produce, as in hand composition, a line made up of separate letters.

The compositor on the composing machine is called an "operator." He manipulates a keyboard similar in

appearance to that of a typewriter, the keys of which when depressed set certain mechanism into operation, ultimately producing lines of type spaced and ready for printing, either in solid lines, as with the Linotype or Intertype, or in single letters as produced by the Monotype.

MACHINE PRINTING.

When the forme of type and illustrations has been sent to press a large amount of work and skill is demanded of the pressman or machine manager, before the results are obtained which enable even a novice to recognise that the book or the piece of printed matter he is handling is an example of good craftsmanship. There is an indefinable charm about a well printed page. Hours, and sometimes days, of what is called "making ready" may be spent on the machine to produce an even, clear, solid and sharp impression from the forme. Particularly is this the case when printing illustrations: the printer has to adjust the weight of pressure to suit the different tones in the plate, so that the "tone values" of the original design will be retained throughout the printing of a large edition. This is done by cutting out on sheets of paper the parts which print too heavily, and patching up those which require to print solidly, by the use of papers of varying thicknesses and pasting them together, forming what is called an "overlay." This is fixed on the platen or cylinder of the machine in such a way that it corresponds exactly with the forme when the impression is made. This work requires a high order of intelligence, skill and much experience.

When the make ready is completed, the machine is "set" to suit the job. Ink suitable for the work is placed in an adjustable trough, called a "duct," which is regulated by means of screws so that an even and sufficient supply of ink is automatically maintained and carried to the forme by means of a system of rollers throughout the run of the job, which may last for a day or even for weeks. On an average something like 9,000 sheets of a school book will be printed in a day; but during their printing great care has to be exercised and a sharp look out kept for letters breaking off or for something (such as a space between words which should not print) "working up" and spoiling the appearance of the work.

There are many kinds of printing machines, too numerous to mention, varying from those which give a flat impression, such as the hand press and platen machines, to the large cylinders and rotaries which produce books and daily newspapers. The various styles of machines are capable of printing anything from a few hundred up to about 200,000 copies per hour.

BLOCK MAKING.

A reference as to how illustrations are obtained may not be considered out of place in this "tabloid article." The artist's drawing, photograph, or design is photographed by a particular process (sometimes through a screen representing a number of minute dots which can be seen if a print from a half-tone block is closely examined). The process-negative is then photographically printed on to a sensitised piece of metal, which, when developed, is subjected to the action of certain acids, which etch, or eat away, the metal not protected by the photographic image. After varying degrees of etching, the piece is left standing in water, providing a surface from which the letterpress printer can print. These relief blocks, when mounted on wood to bring them to type height, are placed in a forme and printed at the same time as type.

Blocks for printing in colours are made very much in the same way, but instead of employing one negative, there are three, each representative of one of the fundamental colours scientifically dissected, and from these negatives, blocks are made. Each block is printed in a different one of the three primary colours—yellow, red and blue—and when the colours are printed on top of each other, a reproduction of the colour tones approximating those in the original painting is obtained.

Printing is acknowledged to be one of the most important of our national industries. It is estimated that some 8,000 firms in the United Kingdom have invested over £30,000,000 in the business which gives employment to some 350,000 workers. Further, it is the art which has educated the world, and as a career for young men it provides considerable scope in its future development. There are great opportunities for men of education coupled with technical knowledge to become leaders who will influence the public to a fuller realisation of the commercial value of good printing, whether it be for newspapers, books or the larger and probably most important section—commercial or job printing.

DUKE STREET, STAMFORD STREET, S.E.1

PAPER TRADE INDUSTRY.

By H. P. STEVENS, M.A., F.I.C.

RAW MATERIALS.—The raw materials used in the British Isles for the manufacture of paper consist of (1) vegetable fibres, derived chiefly from wood, esparto, rags and straw; recently even sawdust has been utilised; (2) soda, lime and bleaching powder for the purification of the fibres; (3) resin, glue, gelatine and starch for sizing and giving a finish to the paper; (4) loading materials such as china clay, chalk, gypsum, etc., to cheapen and render the paper opaque; (5) colours such as ultramarine, coal-tar dyes, the former being used chiefly to counteract the natural yellow tinge in the manufacture of white papers; and (6) waste papers. The manufacture of paper also requires coal for steam raising and a very ample supply of good water.

Rags, which once supplied the bulk of the paper-makers' raw material, are now used for high-grade papers only, and Great Britain is dependent on its Colonies and on foreign countries for the supply of the great bulk of vegetable fibres. Of these wood pulp is the most important. In normal times this comprises four-fifths of the amount of our imports of fibrous materials.

Wood pulp is of two varieties—"mechanical" wood pulp and "chemical" wood pulp. The former predominates and consists of wood ground to pulp in a stream of water; the latter consists of wood disintegrated by chemical processes and fetches two or three times as much as the mechanical pulp. The wood used is mostly coniferous (spruce fir) and therefore derived from countries with temperate or cold climates. Norway and Sweden supplied the bulk of our requirements; next in importance were Russia (Finland), Canada, Newfoundland and Germany. The cutting off of supplies from the last-named country has not appreciably affected the position, and until the restrictive measures came into operation, the British imports of wood pulp had increased rather than diminished. There are ample reserves of wood in Canada and Newfoundland to supply all British requirements.

Esparto is imported in the raw state and converted into pulp in English mills. It is mostly derived from Algeria, the remainder from Spain and parts of the North Coast of Africa. Imports have shown a considerable increase, but even at the end of 1920 had not regained pre-war figures.

Rags are largely imported. The present figures show a decrease both in weight and value.

The following figures give the imports of fibrous raw materials for the three years 1919, 1920 and 1921.

Description	1919 Tons.	1920 Tons.
Mechanical Wood Pulp ..	523,022	538,969
Chemical Wood Pulp ..	490,898	555,204
Esparto	79,021	162,539
Rags	6,235	12,408
Other Materials	1,242	6,682
Totals	1,016,311	1,275,802

IMPORTS AND EXPORTS OF PAPER.—For our purpose the term "paper" must be held to include not only printing, writing and wrapping papers, but also paste board, cardboard, mill board, straw boards, and many specialities.

As regards imports Norway and Sweden supply us with the greater part of the cheaper kinds, such as news and wrapping papers, while Germany's exports of paper to this country were of equal importance, for although cheap printings, such as newspaper, did not bulk so largely, this was neutralised by the larger quantities of almost every other type.

During 1920 both imports and exports show large increases both in quantity and value. During 1921 the reverse is the case.

Figures for 1922 are not yet available.

The following figures give the quantity and value of

the British imports of paper and boards during the last three years:—

Imports.					
1919	1920	1921	1919	1920	1921
Tons.	Tons.	Tons.	£	£	£
381,076	647,263	339,128	13,019,708	30,252,181	11,601,303

Over one quarter of these quantities is accounted for by strawboards manufactured in countries where straw is plentiful. The feature of the 1920 imports is the large increase in all varieties. Great Britain is estimated to produce about 11 per cent. of the world's output of paper and Canada 3 per cent. The United States is by far the largest producer, manufacturing over one-third, and was followed in order by Germany, England, France, Austria, Canada, Italy, Russia, Finland, etc. The British exports of paper for the last three years are given in the following table:—

Exports.					
1919	1920	1921	1919	1920	1921
Tons.	Tons.	Tons.	£	£	£
46,780	117,622	73,249	4,233,933	12,817,859	7,734,441

MANUFACTURE OF PAPER IN THE BRITISH ISLES.—There are 231 paper and cardboard mills in England, sixty-one in Scotland and seven in Ireland. Wood pulp is only manufactured at two mills. There are thirty-seven paper mills in Canada and a large number of wood pulp mills. Some Canadian mills combine the manufacture of both wood pulp and paper. In Newfoundland there are two large establishments, one producing wood pulp and paper and the other wood pulp only. There are seven paper mills in Australia, three in New Zealand and eight in India. Official statistics of the paper output in Great Britain and Ireland were furnished in 1907 for the Census of Production:—

Paper:—	United Kingdom.	
	Quantity.	Value.
Paper for Writing and Drawing and for Envelopes	124,250	3,085,000
Paper for Printing and for Posters, etc. Packing and Wrapping Paper, Biscuits, etc.	436,050	5,590,000
Printing and Coated Papers (not Hangings)	181,830	1,943,000
Pastelboard, Cardboard and Millboard	34,050	846,000
Other Sorts	44,650	565,000
Paper Bags	28,200	700,000
	85,500	487,000
	891,530	

All other Products—Recorded by Value only	113,000
Total Value	13,828,000

1921	1919	1920	1921
Tons.	£	£	£
372,051	4,918,700	8,169,704	4,338,865

A more recent but unofficial estimate has been kindly supplied me by the Paper Makers' Association. The following figures give the annual pre-war production of paper manufactured in the British Isles:—

	Tons.
News, all grades	377,000
Printing and Writing Paper from Wood Pulp ..	254,800
Printing, mostly from Grass (Esparto)	148,200
Brown Papers and Specialities	228,800
Best Writings and Blottings, mostly from Rags ..	20,800
	1,029,600
Mill Boards, Leather Boards, etc.	62,400
Total quantity	1,092,000

OR TO THE MANAGERS—

ALFRED HOLT & CO.,

INDIA BUILDINGS, WATER STREET, LIVERPOOL

IN the early part of the 18th century numerous inventors propounded schemes for applying steam power to vessels to be run upon rivers and canals. A chronological list from 1707 to 1858 is given below.

For the establishment of lines from 1861 to 1888 and for further information see WHITAKER'S ALMANACK, 1913 edition, including the Evolution of the Steamship in the North Atlantic.

In 1824 ocean trade was then carried on with sailing ships, mostly under 500 tons each, and all the steamboats in the United Kingdom only numbered 109.

As the size of steamships increased the heavy cost of construction necessitated the establishment of Corporations, with great strength of capital, which control the principal ocean routes (see page 981).

FIRST STEAMBOATS, PIONEER SAILINGS AND EARLIEST LINES.

1707. Denis Papin experimented on River Fulda with paddle-wheel steamboat.

1736. Jonathan Hulls patented designs similar to modern paddle boat.

1769. James Watt invented a double-acting side-lever engine.

1783. Marquess of Jouffrey made experiments in France.

1785. James Ramsey, in America, propelled a boat with steam through a stern-pipe.

1785. Robert Fitch, in America, propelled a boat with canoe-paddles fixed to a moving beam.

1787. Robert Miller, of Edinburgh, tried primitive manual machinery.

1788. Miller, with Symington, produced a double-hull stern-wheel steamboat.

1802. *Charlotte Dundas*, the first practical steam tugboat, designed by Symington.

1804. *Phoenix*, screw-boat designed by Stephens in New York; first steamer to make a sea voyage.

1807. *Clermont*, first passenger steamer continuously employed; built by Fulton in U.S.A.

1812. *Comet*, first passenger steamer continuously employed in Europe; built by Miller in Scotland.

1818. *Rob Roy*, first sea-trading steamer in the world; built at Glasgow.

1819. *Savannah*, first auxiliary steamer, paddle wheels, to cross the Atlantic; built in New York.

1821. *Aaron Manby*, first steamer (English canal boat) built of iron.

1823. City of Dublin Steam Packet Co. was established.

1824. General Steam Navigation Co. was established at London.

1824. George Thompson & Co. (Aberdeen Line) were established.

1825. *Enterprise* made the first steam passage to India.

1825. *William Fawcett*, pioneer steamer of the P. & O. S.N. Co.

1830. T. & J. Harrison (Harrison Line) were established at Liverpool.

1832. *Elburkah*, iron steamer, took a private exploring party up the Niger.

1834. Lloyd's Register for British and Foreign Shipping established.

1836. F. Green & Co established at London.

1836. Austrian Lloyd Steam Navigation Co. established at Trieste.

In 1814, the steamboats of all kinds registered in the United Kingdom amounted to less than 1,000 tons, increased to nearly 8,000 tons by 1820. There were 766 British steamers afloat in 1838, in all just short of 150,000 tons. The invaluable Register Book which is published by the Committee of Lloyd's Register of British and Foreign Shipping shows that on June 30, 1922, the steamship empire builders of Great Britain owned 10,263 vessels, 21,615,009 gross tons, exclusive of 1,058 ships (427,511 tons) belonging to the dwindling disciples of time-honoured canvas. The total for the world was—Steam, 61,342,952 tons; and sail, 3,027,834 tons.

Owing to recent inventions passengers enjoy greater immunity from accidents, the majority of passenger steamers being now fitted with installation of wireless telegraphy and with submarine signalling apparatus.

1837. *Francis B. Ogden*, first successful screw tugboat; fitted with Ericsson's propeller.

1838. *Archimedes*, made the Dover-Calais passage under two hours, fitted with Smith's propeller.

1838. *R. F. Stockton*, built for a tugboat, fitted with Ericsson's propeller, sailed to America; first iron vessel to cross the Atlantic; first screw steamer used in America.

1839. *Thames*, pioneer steamer of the Royal Mail Steam Packet Co.

1839. George Smith & Sons (City Line) were established at Glasgow.

1840. *Britannia*, pioneer steamer of the Cunard Line.

1840. *Chile*, pioneer steamer of the Pacific Steam Navigation Co.

1845. *Great Britain*, first iron screw steamer, precursor of modern Atlantic steamer.

1845. Thos. Wilson, Sons & Co., Ltd. (Wilson Line) established at Hull.

1847. Pacific Mail Steamship Co. established in America.

1849. Houlder Brothers & Co. established at London.

1850. Bullard, King & Co. (Natal Line) established at London.

1850. Messageries Maritimes de France established.

1850. Inman (now American) Line established at Liverpool.

1851. *Tiber*, first steamer of the Bibby Line, established 1821 at Liverpool.

1852. *Forerunner*, pioneer steamer of the African Steamship Co.

1853. Union Steamship Co. was established (now Union-Castle Line).

1853. *Borussia*, first steamer of the Hamburg-American Packet Co., established 1847.

1854. *Canadian*, first steamer of the Allan Line, established 1820.

1854. Donaldson Bros. established at Glasgow.

1855. British India Steam Navigation Co. was established.

1856. *Tempest*, first steamer Anchor Line.

1857. *Waldensian*, first steamer of J. T. Rennie, Son & Co. (Aberdeen Line).

1858. *Bremen*, first Atlantic steamer of the Norddeutscher Lloyd, established 1856.

1858. *Great Eastern* launched into the Thames, Jan. 31; commenced, May 1, 1854.

1858. British and African Steam Navigation Co., Ltd., established at Liverpool.

You'll find it in "Whitaker."

*Every "well found" Passenger Ship
carries a Library.*

"It is a commonplace to say that no reference library is complete without "Whitaker." One can go much further and remark that a great many people find the Almanack a reference library in itself. There is nothing to equal it, either in conception or in the completeness and care with which it is put together and kept up-to-date.—*The Times*.

"Whitaker" is a Library in itself.

PUBLIC SCHOOLS' SCHOLARSHIPS.

KING'S SCHOOL, CANTERBURY.

Scholarships are offered for competition twice annually, in June and November. A King's Scholarship is tenable with an Entrance Scholarship, so that a boy may at entrance win scholarships to the value of £55 15s a year for five years. Full information from HEADMASTER, KING'S SCHOOL, CANTERBURY.

DOVER COLLEGE.

Three Entrance Scholarships for Boarders are awarded in July, value £40, £30, and £20, one of each. The Common Entrance Examination is used as a Preliminary Test and selected Candidates are asked to do higher papers. The examination can be taken at the Preparatory School.

EXETER SCHOOL, EXETER.

Entrance Scholarship Examination July 3rd and 4th, 1923. Four Scholarships, £40-10, may be offered, and one Honour Scholarship of £40 for the Sons of Officers who have fallen in the War. University Endowment, £400 a year. Apply to THE HEADMASTER, EXETER SCHOOL, EXETER.

MALVERN COLLEGE.

Entrance Scholarship Examination June 12th, 13th and 14th, 1923. One or two £100, Five of £60, and Five of £40 per annum. Exhibitions, value £12 to £25 per annum, may be awarded boys who do well but fail to obtain scholarships. Apply to THE BURSAR, THE COLLEGE, MALVERN.

SEDBERGH SCHOOL.

Entrance Scholarship Examination in May or June in London, after preliminary test at Preparatory Schools. Ten Scholarships (£100 to £40) are offered. House Exhibitions may be awarded to deserving candidates. Apply to the BURSAR, SEDBERGH SCHOOL, YORKS.

BLUNDELL'S SCHOOL, TIVERTON.

Six Foundation Scholarships, including two or three Entrance Scholarships of £60 a year, will be offered for competition on May 29th and two following days. Candidates must be between 13 and 14 years of age on May 1st. Particulars may be obtained from the Headmaster.

UPPINGHAM.

An Examination will be held in May or June, 1923, for about Eight Open Scholarships, varying from £85 to £30 per annum. Allowance is made for age, but a candidate must be under 14 on May 1st, 1923. Apply to THE BURSAR, OLD SCHOOL HOUSE, UPPINGHAM.

KING'S COLLEGE SCHOOL, WIMBLEDON COMMON, S.W.

An examination is held each Summer Term. Candidates for Senior Scholarships must be under 16, and for Junior Scholarships under 14, on May 1st. The value of the Scholarships depends upon the Standard attained, but never exceeds the amount of Tuition Fees (£39 per annum). See "Public Schools' Year Book."

CHILLON COLLEGE

(Uniting Cheltonia English School and l'Ecole-Foyer des Pleiades Swiss School),

MONTREUX, SWITZERLAND.

A HIGH-CLASS PUBLIC
SCHOOL FOR BOYS
ON LAKE OF GENEVA.

Conducted on English
Public School lines by
English and Swiss Masters,
with French the lan-
guage of both Schools.

Head Master—

Rev. F. de W. LUSH-
INGTON, M.A., Cantab.

Late Headmaster of
Dover College, formerly
Headmaster of Elstree
School, and Assistant
Master at Eton College.

SENIOR, JUNIOR AND PREPARATORY SCHOOLS.

Senior College.—Altitude, 1,300 feet above sea level and 50 feet above the lake, overlooking the famous Chateau de Chillon. Stands in its own park containing the playing fields. Modern buildings (1912), running hot and cold water, central heating and electric light, facing south and admirably sheltered. All games; bathing, rowing, winter sports.

Preparation for English and American Schools and Universities. Finishing classes for Modern Languages. Army Class. Instruction in all commercial subjects and science.

Holiday Chalet in mountains. Entire charge taken of Overseas boys.

Preparatory School.—Altitude, 3,500 feet above sea level, situated on Mont Pleiades, overlooking Montreux (2 miles), Vevey (2 miles), and the Lake. Hotel and station close by.

Wonderful morning air and sunshine. Specially built and equipped for a school. Electric heating, lighting, and telephone. Private bathing pool, skating rink, tennis court, scouting.

Many classes and meals held in open air.

EDUCATION.**MESSRS. GABBITAS, THRING & CO.,****86, Sackville Street, Piccadilly, W.,**Tel. 4926
Regent.

have a department specially organised for advising Parents and Guardians as to the best Educational Establishments for Boys and Girls in the United Kingdom or on the Continent. The Firm have had experience as Educational Agents for nearly fifty years, and during their long career have been instrumental in sending Masters and Tutors to the leading Schools and Tutors' Establishments, and are in the closest touch with all educational matters. They can give, FREE OF CHARGE, to the Parent or Guardian information and advice as to—

**SCHOOLS FOR BOYS OR GIRLS. TUTORS'
ESTABLISHMENTS. EDUCATIONAL HOMES.
DOMESTIC ECONOMY, AGRICULTURAL AND
SECRETARIAL COLLEGES.**

**EITHER AT HOME
OR
ABROAD.**

To enable the Firm to advise efficiently it is necessary that *full particulars should be given*; especially as to the age of the Pupil, previous education, and present standard of attainments, special subjects of study, locality, whether a large or small establishment is preferred, and the fees it is intended to pay.

The Firm also can assist in procuring the services of Private Tutors and Governesses, Resident, Travelling, Non-Resident, or Visiting, of whom they always have a large number on their Lists.

Transfers of and Partnerships in Boys' and Girls' Schools are also negotiated. Masters, Tutors, and Governesses seeking Posts can have a Prospectus on application, free of charge.

ST. LEONARDS-ON-SEA.**SCHOOL FOR DEVELOPMENT OF BACKWARD, NERVOUS,
AND EXCEPTIONAL PUPILS**

WHO CANNOT BE TAUGHT WITH ADVANTAGE IN ORDINARY BOARDING SCHOOLS.

Expert health and educational treatment. Temperamental difficulties studied, remedial exercises, &c. There is a kindergarten department. Particulars from—

Fees.—25 to 28 guineas per term.

BATH.

The Medical Officer of Health writes:—"Bath City and County Borough. Health resort, Somerset. Pop. 50,721. Only Hot Springs in British Isles. 'Most perfectly equipped modern bathing establishments in Europe.' Extensive Roman remains. Subsoils, freestones, clay, sand and gravel. Elevation, 60 to 750 feet. Climate: where sheltered, similar to southern marine climates; where exposed, good range of temperature and bracing winds. Sunshine (1921)—1,614 hours. Water-supply, pure and abundant springs." Bath stands alone in Great Britain as a City of considerable size, and much reputation, the beginnings of which have been determined by the existence of Thermal Springs. Traditions assert that the first discovery of the Spring and acquaintance with their healing virtues were made in primitive times before the advent of the Romans. *Vide: Climate and Baths of Great Britain and Ireland.*

[See p. 1034 for HOLIDAY GUIDE.]

PREMISES are situated in the South of Blackpool; well built, properly ventilated, and fitted with every modern convenience.

Long list of References and Terms may be had on application to PRINCIPAL.

BIRMINGHAM

(Warwickshire), the chief town of the Midlands, nearly in the centre of England, is a most progressive and interesting city, noted for its imposing public buildings: the Corinthian Town Hall, where triennial musical festivals are held, contains one of the largest and finest organs in the world. The municipal buildings, law courts, corporation museum and art gallery, and public parks testify to local municipal enterprise. The Birmingham University (formerly the Mason College) is endowed for the study of Arts, Science, Medicine, Engineering, &c.

The City of Birmingham is 13 miles long and 11 miles in breadth, and has several fine public parks. Edgbaston forms the south-western portion of the city. Erdington is an ancient hamlet on the highway from Birmingham to Sutton Coldfield. Harborne is a rapidly-increasing suburb on the south-west; it was incorporated in the city November 9th, 1891, and has a terminal station on a branch line of the L. & N.W. Railway. Quinton is 2 miles east of Halesowen, 5 miles west from Birmingham, and 3 miles south from Oldbury, in the Harborne ward of the municipal borough, and in the Edgbaston division of the parliamentary borough.

BOYS.

**THE EDGBASTON PREPARATORY SCHOOL,
HALLFIELD, EDGBASTON.

Three Years' Course.

Extensive grounds and playing fields.
Prospectus on application.

BEXHILL-ON-SEA

(Sussex). The Medical Officer of Health writes :—
 "Bexhill has always been celebrated for the longevity of its inhabitants. The death-rate for 1913 here was only 9'47. The town holds a first place among health resorts, owing to the general salubrity of the climate, genial influences of invigorating breezes and brilliant sunshine, perfect drainage, the purity of its water, and its freedom from epidemics. The sea-bathing is excellent. Residence at Bexhill is very beneficial in anæmia, scrofula, and tuberculous complaints, and in diseases of the respiratory organs, which may be sent here with advantage during the greater part of the year. Especially suitable for convalescents and delicate children." Golf links, 18 holes. Pop. 15,330.

[See p. 1035 for HOLIDAY GUIDE.]

BOYS. HOLMWOD SCHOOL.

Situation.—On Hastings Road, on hill commanding fine Channel and inland views.

Small Farmery, Sports Field of 5 acres, Orchard, Tennis Court, and Garden.

Limited number of pupils who receive direct personal supervision and individual teaching.

Fees.—100 to 150 guineas per annum.

BRIGHTON.

The Medical Officer of Health writes :—"Brighton has the bracing qualities of East Coast resorts, with a larger amount of sunshine and more shelter during unfavourable weather. During 1910 the record of bright sunshine was 48 per cent. in excess of London; in the winter months the excess was even more marked, being 88 per cent. Whilst Brighton has more sunshine than London, at the same time it is cooler in summer. There is an unlimited pure water-supply and perfect sanitary arrangements."

With its two piers, its immense promenade, its pavilion grounds, and numerous parks and recreation grounds, together with a fine municipal orchestra, Brighton offers attractions to meet the requirements of all tastes, and combines with the advantages of the seaside resort the amusements of the town. Sunshine (1921), 1,948 hours. Average rainfall for 34 years, 28.12 inches. Pop. 142,427.

[See p. 1036 for HOLIDAY GUIDE.]

Capt. R. P. FENN, M.C., B.A. (Oxon.).

(Formerly Scholar of Jesus College.)

PREPARATORY (7 to 14) FOR PUBLIC SCHOOLS AND ROYAL NAVY

Premises situate about 2 miles from Chichester, on gravel soil, in an exceptionally healthy neighbourhood near the South Downs. Thorough ground work. Individual attention.

Special care of backward and delicate boys.

Entire charge where parents are abroad.

Fees.—£30 per term.

COLWYN BAY.

The Medical Officer of Health writes:—"As stated in the standard work, 'The Climates and Baths of Great Britain and Ireland,' Colwyn Bay has become one of the most important health resorts of the north. It owes its rapid rise to its exceptional situation. The town is well protected from the prevailing winds and enjoys a large amount of sunshine. The rainfall is low. Climate in winter remarkably mild and equable. Water-supply of excellent quality, obtained from a mountain lake. Sewage system recently extended." Pop. 12,630.

BOYS.**RYDAL MOUNT SCHOOL.**

Inspected and recognised by Board of Education.

Headmaster - Rev. A. J. COSTAIN, M.A.

(Late Classical Exhibitioner, Lincoln College, Oxford.)

An Efficient Staff of 15 University Graduates.

Fifteen acres of playing fields. Carpenter's shop. Laboratories and general equipment up to the best modern standards. Cadet Corps. Special attention to Physical Training.

Offers a good sound training for boys intended for the professions or for commerce.

Write Headmaster for Illustrated Prospectus.

BOYS.**DINGLEWOOD.**

PREPARATORY (7 to 14) FOR PUBLIC SCHOOLS AND ROYAL NAVY.

Principals: { A. E. THOMPSON, M.A. (Corpus Christi College, Oxford).
J. H. SCOTT, M.A. (Christ's College, Cambridge). }

Premises.—Stand high, facing sea, on gravel soil, 2 minutes' walk from the sea, 7 acres of grounds.

School Course.—Includes all subjects necessary for entrance to Public Schools and Royal Navy.

Recent Scholarship and Entrance Successes.

Cricket, Football, Tennis, Shooting, Swimming, Boxing, Dancing, Carpentry.

Fees.—35 guineas per term.

COOKHAM.

The Medical Officer of Health writes:—"Quaint old-fashioned riverside village. Noted centre for river sports, picnics, &c. On gravel soil. Public water-supply. Low rainfall. Good train service to London. Excellent health records." Population (estimated), 3,685.

BOYS.

**THE VICARAGE,
COOKHAM, BERKS.**

The Vicar of Cookham, Berks, who has had over twenty years' experience as Headmaster and Army Tutor, receives a few pupils at the Vicarage.

Special and individual attention to boys who have not been able to keep up with ordinary form work at school.

Entire charge of boys during term and holidays, if desired.

Well-known, beautiful neighbourhood. Fifty minutes from Paddington.

Rev. Dr. **BACHELOR**, Vicarage, Cookham.

DOWNHAM MARKET

(Norfolk). The Medical Officer of Health writes:—"Downham Market is protected from east winds. Climate is bracing, healthy, and several degrees warmer than in corresponding parts. Subsoil of sand and greensand; modern drainage; an excellent public water-supply."

GIRLS. **HILL HOUSE SCHOOL.**

Patron - The Lord Bishop of Norwich.

Principals - - { Miss **MARKHAM**.
Miss **ALICE MARKHAM**.
Assisted by Resident Trained and Certificated Mistresses and Visiting Masters, and Domestic Science Mistress.

Course of Study includes Scripture, usual English subjects, Modern Languages, Botany, Nature Study, Class Singing, Drawing, Drilling, Needlework, Shorthand and Typewriting. Music a particularly strong feature. Pupils prepared for Cambridge Local Examinations, Royal Academy (Music) Examinations and Royal Drawing Society. Hockey and Tennis under Games Mistress. Girl Guides School Company.

Fees.—From 80 guineas inclusive.

FRAMLINGHAM

(Suffolk). The Medical Officer of Health writes:—"The College is well situated, overlooking the town and castle. Good water-supply and system of drainage. Climate is very healthy and bracing." Pop. 2,400.

BOYS.

(Founded 1864.)

**FRAMLINGHAM COLLEGE,
SUFFOLK.**

Headmaster - - F. W. **STOCKS**, M.A.
(Late House Master Felsted School.)

A SECONDARY PUBLIC SCHOOL (Incorporated Royal Charter.) For 250 Boys (9 to 19 years).

Object.—Provide at moderate cost on Public Schools principles an education preparatory for Universities, Professions, Civil Service, and other Competitive Exams., also for Agricultural and Commercial Careers. *Premises.*—Elevated situation, 23 acres, 4 Playing Fields, Rifle Ranges, Gymnasium, Fives Courts; Carpenter's Shop, 2 Laboratories, Swimming Bath; Library, Reading Room, Chapel. Officers' Training Corps. Sanitation certified. *Fees.*—£90 to £99.

FOLKESTONE.

The Medical Officer of Health writes:—"Aspect, S. & S.E. The town is one of the best-planned seaside resorts. The comparatively very healthy and dry climate is due to the porous nature of the geological formation and, in addition, the facilities for drainage make mists, damp and fogs almost unknown. The sanitation of the town is carefully guarded, and precautions taken from time to time to maintain its efficiency. For an educational centre it is particularly adapted. A fashionable holiday resort, residential town, and cross-Channel packet station, close to Shorncliffe camp, ore and a half hours from London, modern Folkestone stands on a lofty cliff on the Kentish coast facing the Straits of Dover." Sunshine (1921), 1,955 hours. Pop. 33,502.

[See p. 1043 for HOLIDAY GUIDE.]

BOYS.

**THE GRANGE,

Fees.—From 25 gns. to 35 gns. per term.

Telegrams:

Station:

"Downs, Folkestone."

Folkestone Central.

EASTBOURNE,

Sussex. Municipal Borough. Population, 52,544. L.B. & S.C. Railway. 62 miles from London. Elevation, from sea-level to 140 feet above; the districts of Mead and Upperton stand upon very high ground. Climate mild, invigorating; moderate rainfall. Bathing excellent.

The Medical Officer of Health writes:—"Its advantages as a health resort are much sunshine, pure air, absence of fog, clean, quickly-drying roadways, large parks and gardens with many trees, a plentiful and good water-supply from wells sunk in the deep chalk, and the proximity to the breezy, health-giving South Downs. The climate is generally beneficial in anæmia, scrofula, and early tubercular disease; and its effects are especially beneficial in the case of convalescent children. Death rate 1921, inclusive, 10.28 per 1,000. Full benefit of winter sun is secured. Warm, sunny shelter always obtainable in centre of town. Beachy Head breaks S.W. winds, and diverts much rain, dryness of soil being promoted by great porosity of chalk. Always at or near the top for sunshine in official records." Sunshine (1921), 2,067 hours.

[See p. 1040 for HOLIDAY GUIDE.]

BOYS. ST. BEDES.

PREPARATORY SCHOOL FOR THE PUBLIC SCHOOLS AND ROYAL NAVY.

School Company of Girl Guides and Brownie Pack.

Guilts for Nature Study and Newspaper work.

HUNSTANTON-ON-SEA.

The Medical Officer of Health writes:—"Hunstanton shares with all the East Coast watering-places a great reputation for convalescents. Apart from this, Hunstanton seems specially adapted for children. The rapidly-drying soil, the absolutely safe bathing, the magnificent sands for exercise in wet or dry weather, perfect drainage, and splendid water, combine to make it an ideal place for them. The number of schools and the wonderful physical progress of weakly children bear testimony to these advantages."

This quiet East Coast health resort stands on the north-west coast of Norfolk, facing the Wash, between Cromer and King's Lynn. Pier, 800 feet in length. Golf Links, 18 holes. Pop. 2,511.

[See p. 1046 for HOLIDAY GUIDE.]

MALVERN

(Worcester). The Medical Officer of Health writes:—"Malvern is picturesquely situated on the eastern and western slopes of the range of Malvern Hills, with extensive and magnificent views on both sides. The hills, which rise to an altitude of 1,400 feet, are easily accessible for delicate persons, either on foot or by carriage. The climate has a most beneficial effect on invalids. The houses are so placed as to receive more than the ordinary amount of sunshine. The rainfall is low, and the soil dries with remarkable rapidity. The water-supply is bountiful and of great purity, and the sanitary state of the district generally of a high standard."

Pop. 17,809.

[See p. 1049 for HOLIDAY GUIDE.

Fees for Boarders, 87 guineas per annum.

WATFORD

(Hertfordshire). The Medical Officer of Health writes:—"Principally residential, 17½ miles from London. Stands high upon gravel soil; healthy climate and bracing air; abundant pure water-supply and modern drainage." Pop. 40,939.

BOYS.

SHIRLEY HOUSE SCHOOL.

Preparatory School for the Public Schools and Royal Naval Cadetships.

Principal - R. T. CAMPBELL, B.A. (Cantab.). Boys received from 7 to 14.

Main Subjects, Classics, Mathematics, English and French (on Modern Conversational methods).

School House in own grounds (18 acres). Cricket and Football Field (5 acres). Specially designed Class-rooms. Laboratory. Gymnasium. Sanitation perfect. Drill: Swedish and Military. Open-air Swimming Bath. Rifle Range, Squash Racquet Court, Carpenter's Shop.

Capable Matron under Mrs. Campbell's supervision. Entire charge of pupils from abroad.

Telephone, 439 Watford.

WESTERHAM.

The Medical Officer of Health writes:—"Westerham is situated in a sheltered position near the foot of the well-known Westerham Hill, and within an hour by rail of London. There is main drainage and a public water-supply." Pop. 3,049.

GIRLS.

THE HILL SCHOOL.

Principal - Mrs. MACLEAR LADDS.

Premises.—On southern slope of North Downs, 600 feet above sea-level, large grounds and playing fields, gymnasium.

School Course.—All English subjects, Latin, French, Mathematics, Drawing, Science, Nature Study, Dressmaking, Needlework, Voice Training and Class Singing, Physical Drill (Swedish), Dancing, Lacrosse, Net Ball, Cricket, Tennis.

Entire charge of pupils from abroad.

Pupils prepared, if desired, for Public Examinations.

WESTGATE-ON-SEA.

A small town of modern foundation situated 1½ miles from and to the west of Margate; originally intended, and hitherto exclusively developed, as a seaside resort for the upper classes desirous of obtaining all the climatic advantages for which Margate is noted. The sea-walls form two promenades over a mile long, steps giving access to the beach (sandy). There are gardens with walks at different elevations, giving protection from winds. Marine drive for two miles along the top of the cliff. Safe bathing. Modern drainage; excellent water-supply. Pop. 3,538.

GIRLS.

ETHANDENE.

FOR GIRLS.

Principals—

The Misses K. S. and A. E. HARE.

Assisted by a large Staff of Fully Qualified Resident Mistresses and Visiting Professors.

Great attention given to the study of Modern Languages, Music, and Art.

Premises.—Recently extended, now include, besides well-ventilated Class-rooms and Gymnasium Hall, a separate Dining Room, outdoor Class-room, Studio, and Library.

Physical Training on Swedish system. Aim—General health, all-round development, graceful bearing.

GIRLS.

STANMORE.

HIGH-CLASS BOARDING SCHOOL FOR GIRLS.

Principal - Miss COWPER.

Premises.—Detached, in splendid position on the sea front.

Aim.—Preparation for life by harmonious development of Moral, Intellectual, and Physical Powers.

Curriculum.—Comprehensive; thorough Modern System, individual treatment according to requirements. Examinations if required.

Physical Training.—Gymnastics, Swedish Drill; Out-door Games and Recreation.

Entire charge where parents abroad.

BOYS.

ST. AIDAN'S.

MAJOR L. C. SARGENT, B.A.

Assisted by a highly-qualified staff, receives 15 pupils working for Matriculation, Previous, Responsions, Woolwich and Sandhurst.

In return for the attempt to do everything possible for the education and happiness of pupils, the highest standard of conduct is expected, and only those who wish to work seriously are asked to remain.

Prospectus and full details on application; all queries gladly answered.

WESTON-SUPER-MARE.

The Medical Officer of Health writes :—"Lies on the shores of Weston Bay in the Bristol Channel, on the sea-ward of the Mendips, covering the southern slopes of Worlebury, and the alluvial and sandy plain at its foot. Well protected from the cold northerly winds by the Weston-Worle ridge, and open to pure invigorating breezes direct from the Atlantic Ocean, the town has an equability of climate through all the seasons of the year, difficult to find anywhere else in England. Its climate is equable and dry—bracing in summer, warm in winter, being sheltered against the east wind by the Mendip range. Favoured with a dry sub-soil, a high sunshine record, and remarkably free from infectious diseases, the town is admirably suited for invalids and delicate-children, and is pre-eminently delightful as a holiday centre, with numerous beauty spots."

A spacious asphalted marine parade and carriage drive extends for over two miles; protected by a sea wall. The piers of Weston-super-Mare are amongst its chief attractions. Ample opportunities for marine excursions. On Knightstone are swimming baths, and a handsome pavilion, capable of seating 2,500 people, used principally for theatricals. Public Library and Museum. Electric tramcars.

Sunshine (1921), 1,752 hours. Water-supply, constant. Drainage, modern. Soil, sandy.

[See p. 1058 for HOLIDAY GUIDE.]

GIRLS.

EASTERN HOUSE,

SOUTH ROAD.

Principal - - Mrs. A. L. LAWS.

Premises.—Stand high, sheltered from N. and E. Large, lofty, well-ventilated rooms.

Aim.—To render school as homelike as possible. Great care taken with religious and moral training, as well as physical and intellectual training.

A residential Housewifery School for cooking, laundry, dressmaking, &c., completes the school curriculum.

For Illustrated Prospectus and Terms, apply the Principal, as above.

GIRLS.

DUNMARKLYN.

FOR GIRLS.

Principal - - - Mrs. CROSS.

Premises.—Healthily situated on high ground overlooking the sea.

Preparation for all examinations by staff of Graduates.

Individual attention, modern methods, sound tuition combined with refined home atmosphere. Health and comfort receive every care, especially in the case of little girls leaving home for the first time.

Music and Foreign Languages receive special attention.

Entire charge where parents are abroad.

GIRLS.

ATHELSTAN (SCHOOL FOR GIRLS), WESTON-SUPER-MARE.

Premises stand high in the healthiest and most sheltered part of Weston.

Aim.—To provide thoroughly good and practical Education combined with comforts of Home.

Course of Instruction includes usual English subjects, Mathematics, French, Latin, German, Drawing, Book-keeping, Needlework, Class Singing, Drilling, Domestic Science.

Preparation for all Examinations.

Tennis, Hockey, Swimming, Cycling.

Fees.—From 50 guineas per annum.

For Prospectus, apply to Miss JOHNSTONE,
Principal.

BOYS.

(Founded 1877.)

ETONHURST.

PREPARATORY SCHOOL FOR SONS OF
GENTLEMEN

(Between ages of 6 and 15).

Mr. GEORGE E. WOLLEN, M.A.

(Formerly of Stratheden, Blackheath.)

Assisted by Efficient Staff, Masters & Governesses.

Prepares Boys for PUBLIC SCHOOLS (Scholarships and Entrance Examinations) and ROYAL NAVY. Thorough ground-work. Careful Physical Training.

Headmaster—

LEONARD C. COMFORT, B.Sc. (Lond.).

Objects.—To give sound Education suitable for Commercial or Professional life, with good Moral and Physical training.

Prepares for Cambridge Locals, Matriculation, also Preliminary Law and Chartered Accountants.

Premises specially built with lofty, airy rooms.

Healthiest position in the West of England. Ideal School for Delicate Boys. Football, Cricket, Cadet Corps, Tennis, Bathing, Carpentry, Gymnasium, and Chemical Laboratory. Modern Languages a speciality.

WEYBRIDGE.

The Medical Officer of Health writes :—"Situated in pine country overlooking the Valley of the Thames, the district of Weybridge is extremely healthy. The soil is gravel and sand. There is a constant and excellent water-supply, and there is an efficient system of drainage. Pop. 6,286.

GIRLS.

HEATH HOUSE, WEYBRIDGE.

HIGH SCHOOL FOR GIRLS.

Principal - - - Miss M. H. HIGGINS.

Assisted by Resident Staff of qualified

Misses proficient in English,

Music, Art, and Foreign Languages.

Premises.—Excellent; elevated situation on gravel soil, in own extensive grounds of nearly four acres.

School Course.—Provides for broad Education upon Modern lines; GIRLS TAUGHT USE AND NECESSITY of corporate public-spirited life.

Usual Public Examinations prepared for.

Social observances receive due care.

Fees moderate.

WEYMOUTH

(Dorset). The Medical Officer of Health writes:—"Its rare geographical position, pure, fresh, and invigorating breezes, wealth of bright sunshine, its soft yet mildly invigorating atmosphere, render the climate one of the most equable."

[See p. 1060 for HOLIDAY GUIDE.]

GIRLS

WESTBOURNE SCHOOL,

LODMOOR HOUSE, WEYMOUTH.

PREPARATORY MAIN AND SENIOR SECTIONS.

Preparation for University, Professional and Business Careers.

Boat House on the Severn. Many valuable Scholarships.

Fees.—£85 to £100 per annum.

WORTHING.

The Medical Officer of Health writes:—"On South Coast, 10 miles from Brighton. Background of South Downs affords protection from northern winds. Worthing stands high in the opinion of the medical profession for its genial and equable climate. Good drainage system and pure water. The sands are hard, smooth, and extensive, and the place generally is well adapted to the requirements of children. The winter temperature compares favourably with Ventnor." Sunshine (1920), 1,692 hours. Pop. 30,305.

[See p. 1069 for HOLIDAY GUIDE.]

GIRLS

CHURCH HOUSE SCHOOL.

Principals - - Miss FISHER.

Miss MORTER.

"HOUSES AND ESTATES." FORTT, HATT, & BILLINGS, F.A.I., Auctioneers and Estate Agents. Special list on application. Offices, 3, Burton Street. Telephone, 280, 893, 941, and 1073.

BEDFORD,

C.B. Pop. 30,183. 50 miles from London. Midland and L. & N.W. Railways. A noted educational centre on the banks of the Great Ouse, with charming riverside promenade.

Golf Links (18 holes).

[See p. 1010 for SCHOOLS.

THE PRINCIPAL HOUSE AGENTS FOR BEDFORD AND COUNTY. W. and H. PEACOCK, 84, High St., Bedford. (Telephone, No. 115.) The Bedford Illustrated Property Register contains Map, school fees, 60 views and photos of houses. Post free. Weekly Sales. Auction Rooms, Lime St. Auction Mart, Horne Lane.

BEXHILL,

SUSSEX. M.B. Pop. 15,330. L.B. & S.C. and S.E. & C. Railways. 71 miles from London, 5 miles from Hastings, 12 miles from Eastbourne. Aspect—South. Climate—Dry, invigorating. Water

Supply—Constant. Soil—Sandy. A modern select seaside resort, with good educational facilities. 2 Golf Links. Public Park, 121 acres. Excursions—Battle Abbey, 8 miles; Pevensey Castle, 7 miles; Hurstmonceux Castle, 10 miles.

The rapid growth of Bexhill is to be attributed to its bracing air and sunny climate, and it has been found that the air possesses recuperative and stimulating qualities in a remarkable degree. It is one of the sunniest spots on the South Coast; fogs are practically unknown, while the soil is for the most part sandy, and dries quickly after rain. The excellent quality of the water is attributed to the Ashdown Green sands beneath the subsoil of the district.

RATES, 11s. 6d. in the £. GAS, 7s. 5d. per thousand. ELECTRIC LIGHT, 9d. per unit.

Early Closing Day—Wednesday.

Last Post leaves 9.0 p.m.

[See p. 1012 for SCHOOLS.

THE MUSEUM, BRIGHTON.**

BROADSTAIRS,

KENT. U.D.C. Pop. 15,465. S.E. & C. Railway. 75 miles from London. Location—Between Ramsgate and Margate; connected with both by electric tram service. Elevation—About 150 ft. Neighbourhood; high cliffs. Aspect—South-east. Climate—Dry, bracing. Sunshine (1921) 2,020 hours. Water Supply—Constant. Drainage—Modern. Soil—Chalk. Front—Promenade on top of cliff; ornamental gardens. Beach—Sands. A quiet, select, family resort and exhilarating retreat. Remarkably free from fogs and mists; bracing in summer and mild in winter; suitable for invalids and delicate children throughout the year. The old town is a primitive place with straggling streets; the cliffs, which rise perpendicularly, overlook a cosy little bay and command splendid sea view from the parade. Queen Caroline, when Princess of Wales, frequently visited the place, and also the late Queen (as Princess Victoria), and the Duke and H.R.H. the Duchess of Fife. Dickens often stayed at 12, High Street, and at Lawn House and Bleak House.

RATES, 14s. 7d. in the £. GAS, 1s. 5d. per therm. ELECTRIC LIGHT, 8d. per unit.
Early Closing Day—Thursday. Last post leaves 8.30 p.m.

HARROGATE,

YORKSHIRE. M.B. Pop. 38,080. N.E. Railway. Location—200 miles from London: 16 miles N. of Leeds; 20 miles W. of York; 18 miles from Bradford. Elevation—320 to 620 feet. Neighbourhood—Open moorlands. Climate—Bracing, dry, clear air. Sunshine (1921)—1,552 hours. Water Supply—Constant, soft. Drainage—Modern. Soil—Alluvial, grit and shale. Baths—Four large establishments open all the year round, providing complete modern installations, embracing every treatment of proved value (over 100 in all). Mineral Waters—87 varieties of medicinal springs in a small area. Excursions—Numerous and beautiful, embracing York and Ripon (cathedrals), Bolton, Fountain, and Kirkstall Abbeys (ruins), etc. Fashionable, select spa and inland resort, celebrated for its mineral springs and bathing palaces; presents many attractions to health seekers and visitors. Favourite town for invalids and the retired; also a scholastic centre; claims exemption from high summer and low winter temperatures. Good facilities for open-air exercise

**VALLEY GARDENS, HARROGATE.**

The Stray, a verdant public common of 200 acres, intersects the town, and is well laid out to retain its rural charm; the Valley Gardens, Royal Spa Gardens and Winter Gardens (Royal Baths) afford sheltered recreation in all weathers. 3 golf links (18 holes). Fox hunting.

RATES, 10s. 6d. in the £. GAS, 4s. 5d. per thousand. ELECTRIC LIGHT, 7¹/₂d. per unit.

J. WHITAKER & SONS, LTD., 12, Warwick Lane, E.C. 4.

MALVERN, WORCESTERSHIRE. U.D.C. 129 miles from London. Pop. 17,000. Means of Access—G.W. Railway and Midland Railway. Location—On the slopes of the Malvern Hills, 8 miles from Worcester. Elevation—300 to 900 feet above sea level. Climate—Dry and bracing. Water Supply—Pure, constant. Drainage—Modern. Soil—Gravel. Season—Summer and winter. Sunshine (1921), 1,830 hours. Annual Fixtures—Shakespeare week in May; Croquet and Lawn Tennis tournaments in May and June. Malvern is an inland watering place, important educational centre, and a pretty residential town, consisting mostly of villas standing in own grounds. The highest point of the Malvern Hills is the Worcestershire Beacon, 1,400 feet high, from the summit of which is obtained one of the most extensive panoramic views in Great Britain, embracing the Severn and Wye Valleys, the Cotswold, Mendip and Welsh hills; and in the plain below can be seen Droitwich, Worcester, Evesham, Cheltenham, Gloucester and the Bristol Channel.

At Malvern a hermitage was endowed by Edward the Confessor. After the Conquest it was changed into a Benedictine Priory. Of the buildings, which date from 1083, there still remain the Abbey Gate and the Norman and Perpendicular church. A Benedictine Priory was established at Little Malvern in 1171, of which the tower and chancel of the old priory church are preserved.

MALVERN*(continued).*

The Malvern Hills being a single chain there are no lateral intervening valleys in the range. This has much to do with the dryness of the climate. The Malvern district is rich in botanical, geological, entomological and ornithological specimens. Assembly rooms (high-class bands and theatrical companies), public library, three clubs, tennis, bowls, croquet, golf—gentlemen's course (18 holes), ladies' course (9 holes)—hunting, boating, fishing. Places of Interest—Rivers Severn (4 m.), Teme (6 m.), Avon (12 m.); boating, fishing, river scenery. Deerhurst (17 m.)—Saxon church. Tewkesbury Abbey (15 m.). Pershore Abbey (16 m.). Bosbury (8 m.)—Edna Lyall's tomb. Valley of the Wye—by rail to Liss, and boat down river to Chepstow.

RATES, 14s. in the £. GAS, 3s. 4d. per thousand. ELECTRIC LIGHT, 8d. per unit.

Places of Interest—Arundel (10 m.), Bramber Castle (9 m.), Goring Woods (3 m.), Broadwater (1 m.), 13th Century Church, Chanctonbury (7 m.) (800 ft.), Cessbury, and other remains of Roman encampments.

Worthing is noted for the equability of its climate, which is largely due to its geographical situation. The proximity of the sea and the shelter afforded by the South Downs combine to modify the climate and avoid extremes. The absence of hills enables convalescents to take exercise without exertion, and so derive the greatest benefit from the high percentage of ozone in the air and the large amount of sunshine.

RATES, 13s. 6d. in the £. GAS 1s. 2½d. per therm. ELECTRIC LIGHT, 8d. per unit.
Early Closing Day—Wednesday. Last Post leaves 9 p.m.

AUSTRALIAN MUTUAL PROVIDENT SOCIETY

ESTABLISHED 1849.

THE LARGEST BRITISH MUTUAL LIFE OFFICE.

Assets	£50,000,000
Annual Income	£7,400,000

The A.M.P. Society's premium rates are lower than the average, it distributes its whole divisible surplus annually among its policy-holders, it values its liabilities on the most stringent basis and it possesses in a unique degree the combination of a low expense rate, a high interest return and a favourable mortality experience. Those who desire to obtain their life assurance cover at the lowest net cost, with perfect security, are invited to investigate these claims.

EVERY YEAR A BONUS YEAR.

LONDON OFFICE: 73-76, KING WILLIAM STREET, E.C. 4.

FIRE BONUS POLICIES.

A total of £30,000 has been returned to Insured by way of Bonus since 1908. The "General" is the only Office transacting business under such a large and extensive Fire Insurance Bonus Scheme.

Bonus Policies are issued for all Insurances on Dwelling Houses and Non-hazardous Properties, and also all Householders' Insurances on Furniture, &c. The Scheme is particularly attractive to those who have paid Fire Premiums year after year without having made a claim, and who naturally look for some reduction by way of Bonus.

LIFE ASSURANCE SOCIETY.

Estd. 1826.

Funds Exceed £7,300,000.

Claims Paid Exceed £12,576,000.

MUTUAL LIFE ASSURANCE. NO SHAREHOLDERS.

LIFE ASSURANCE provides the best means to protect

- (1) FAMILY in event of premature death.
- (2) BUSINESS against loss of capital.
- (3) ESTATE against reduction through DEATH DUTIES.
- (4) OLD AGE against reduced income.

CHILDREN'S EDUCATIONAL and PROVIDENT
POLICIES may be secured at very low cost.

ALL CLASSES OF LIFE ASSURANCE TRANSACTED.

HEAD OFFICE: 35, ST. VINCENT PLACE, GLASGOW.

LONDON OFFICE: 17, TOKENHOUSE YARD, E.C. 2.

THE LATEST IMPROVEMENTS IN LIFE ASSURANCE

1. **AUTOMATIC REPLACEMENT** of the ASSURANCE when it matures without further payment of premium or Medical Examination. Thus when a Policyholder receives, say, £1000 cash after 25 years, the assurance is replaced by another £1000 without further charge. Thus securing £2000 in all.
2. **GUARANTEED ADDITIONS** of £2 : 10 : 0 per cent. per annum if death occurs within the 25 years.
3. **Guaranteed Surrender Values** ranging from 75% to 120% of the tabular premiums, excluding the first year's. **Large Loan Values.**

Policies are issued for larger or smaller amounts and for other terms of years.

Write for particulars of new "Perfect" Policy.

Colonial and Continental Church Society.

(1823-1923).

Patron - - HIS MAJESTY THE KING.

This Society exists for the purpose of supplying the means of Grace to our fellow-countrymen abroad, especially in those pioneer parts of the Empire where they are in danger of drifting into irreligion for lack of the Gospel.

Many Colonial Dioceses receive aid from the Society, including those in Western Canada, Australasia, British East Africa, and India. Many Colonial Bishops are applying for far more aid than the Society's Funds can meet.

293 Clergy and Lay Evangelists have been sent out.

Assistance is also given to ministrations among British Artisans, Sailors, and others in Continental Cities, and Services (self-supporting) are organised for visitors at health resorts.

CHURCH MISSIONARY SOCIETY

SALISBURY SQUARE, LONDON, E.C 4.

Vice-Patron	-	-	-	-	-	THE ARCHBISHOP OF CANTERBURY
President	-	-	-	-	-	COL. SIR ROBERT WILLIAMS, Bart., M.P.
Honorary Secretary	-	-	-	-	-	The REV. CYRIL C. B. BARDSLEY, D.D.

The Church Missionary Society works among millions of non-Christians in Africa, India, Japan, Persia, and Palestine, seeking by the three-fold ministry of preaching, teaching, and healing to lead them to the knowledge of Christ, and to build up native churches which shall be self-supporting, self-governing, and self-expanding.

Everywhere among the nations there are mighty forces at work which must have terrific issues for good or ill. CHINA, broken by revolution and civil war, is feeling after stability of government, and is groping for power to solve her immense problems. JAPAN, after her rapid absorption of western civilization, has a growing sense of moral impotence. INDIA is developing a national consciousness that is producing the most acute unrest. AFRICA, whose well-being forms a "sacred trust of civilization," is in danger through her tribal life being undermined by European impact. The Christian gospel alone provides an adequate spiritual power to save the nations of the world.

In 1921 the C.M.S. had on its staff 1328 European missionaries and 13,487 native Christian workers, labouring among 663,061 adherents, as well as among non-Christian communities. The 4480 institutions, colleges, and schools had an attendance of 317,057 students. The C.M.S. hospitals ministered to 44,557 in-patients and 952,832 out-patients.

AN INCOME OF £474,000 IS NEEDED TO CARRY ON THIS WORK THIS YEAR, AND A FURTHER £100,000 IS REQUIRED TO PAY OFF PAST DEFICIENCIES.

THE DOGS' HOME

OR TEMPORARY HOME FOR
LOST AND STARVING DOGS

(An Institution for the Protection of Dogs & Cats)

4, BATTERSEA PARK ROAD, S.W. 8.

and HACKBRIDGE, SURREY.

(For Boarder and Quarantine Dogs Only).

Patron:

His Most Gracious Majesty the King.

President:

His Grace the DUKE OF PORTLAND, K.G.

OBJECTS:

1. To provide food and shelter for the lost, deserted, and starving dogs of London and the immediate neighbourhood.
2. To restore lost dogs to their rightful owners.
3. When good dogs are unclaimed, to find suitable homes for them at nominal charges.
4. To destroy, by a merciful and painless method, all valueless and diseased dogs.

Out-Patients (Dogs and Cats only), at Battersea, Thursdays, 3.0 p.m.

Since the Foundation of the Home in 1860, over 1,300,000 dogs have received food and shelter.

Dogs and Cats can be received as Boarders at Hackbridge, and Dogs for Quarantine under the Importation of Dogs Order, 1914.

Contributions will be thankfully received by

G. GUY S. ROWLEY, Secretary. [150]

GUY'S HOSPITAL

LONDON BRIDGE, S.E. 1,

NEEDS HELP.

President: H.R.H. THE PRINCE OF WALES, K.G.

Founded in 1724 by Thomas Guy, a Bookseller and Publisher in the City of London, Incorporated and Governed by Acts of Parliament, 11th George 1st, ch. xii., and 61st Victoria, ch. vi., as "The President and Governors of the Hospital founded at the sole costs and charges of Thomas Guy, Esquire."

The Hospital is empowered to receive gifts of, and to hold, land up to an aggregate value of Sixty Thousand Pounds (exclusive of the site of the Hospital), notwithstanding the provisions of the Mortmain Acts.

BEDS
614

IN-PATIENTS (1921)
9,261

OUT-PATIENTS (1921)
116,801

The Income from the Hospital endowments in 1921 amounted to £64,224, whereas Expenditure amounted to £169,028. The Charity is therefore dependent upon Income from other sources to the extent of

Over £100,000 per annum.

The Governors earnestly appeal for Testamentary Gifts, additional Annual Subscriptions and Donations towards Maintenance, and for Contributions towards the Re-endowment Fund of the Charity.

A copy of the Annual Report of the Hospital will be sent, together with any further particulars required, on application to the Clerk, Guy's Hospital, London Bridge, S.E. 1.

Treasurer: VISCOUNT GOSCHEN.

Bankers: THE BANK OF ENGLAND.

THE GIRLS' FRIENDLY SOCIETY

Patrons Her Majesty the QUEEN; Her Majesty QUEEN ALEXANDRA

President—The Hon. Lady Cunliffe, C.B.E.

Secretary—Miss Mytton.

The G.F.S. was founded in 1875, and has now a total of over 300,000 Associates and Members, who are girls and women of all ages, and drawn from all ranks of society. Its object is:—

To unite for the Glory of GOD in one Fellowship of Prayer and Service, the Girls and Women of the Empire; to uphold Purity in Thought, Word and Deed.

The Society works almost all over the world, and its departments are very varied. They include an Invalids' Work Depot, Clubs, Hostels, Holiday Camps, Homes of Rest, Savings Associations, Girl Guides, and the maintenance of a Social Centre in South London.

Donations towards any of these activities will be thankfully received, and further information will be gladly given by—

THE SECRETARY, G.F.S. Central Office, 39, Victoria Street, London, S.W. 1

Telegrams—"AUGUST, VIC, LONDON."

Telephone—2521 Victoria.

THE GORDON BOYS' HOME

(THE NATIONAL MEMORIAL TO GENERAL GORDON).

Patron—THE KING.

Vice-Patrons—H.M. THE QUEEN and H.M. QUEEN ALEXANDRA.

THE HOME IS SITUATED AT WEST END, WOKING, NEAR BROOKWOOD.

The Home is constructed to accommodate 250 Boys, chosen from the homeless and destitute, between the ages of about 14 and 15½, and give them a training, up to the age of 17 or thereabouts, which will fit them alike for civil life in this country or its Colonies, and for service in the Army, Navy or Mercantile Marine.

CONDITIONS OF ADMISSION.—1. The age for admission is from about 14 to 15½ years. 2. A boy must, in the opinion of the Committee, be really necessitous. 3. He must be free from such physical or mental infirmity as would disqualify him for service in the Army or Navy, or for civil employment in the Colonies or elsewhere, which would require active bodily exertion. 4. Boys of known bad character are ineligible.

Free admission is given to such number of boys as above as can be provided for out of the general income of the Home. A guaranteed payment of £35 annually during his stay at the Home will give a right of nomination for a lad fulfilling the conditions of admission. Subscriptions and Donations are urgently needed in order that the above number of boys may be maintained.

Subscriptions are received by THE LONDON COUNTY WESTMINSTER AND PARIS BANK, 1, St. James's Square, S.W.; by the Treasurer, General the Right Hon. Sir DIGHTON PROBYN, V.C., G.C.B., Marlborough House, S.W.; and by the Governor at the Home, from whom any further information can be obtained. For financial reasons the London Office has been abolished.

Governor:—MAJOR SIR T. E. S. PASLEY, BART.

GENERAL LYING-IN HOSPITAL,

York Road, Lambeth, S.E. 1.

ESTABLISHED 1765.

Patrons—H.M. The Queen and H.M. Queen Alexandra.

This Hospital is situated in one of the poorest parts of London, in the district South of the Thames, with a population of nearly two millions.

Married women in indigent circumstances, especially the wives of Soldiers and Sailors, and certain single women (with their first child, after investigation by the Committee), are admitted to the Hospital from all parts of the kingdom, but mainly from the immediate neighbourhood, from which, owing to its poverty, little pecuniary help is obtainable.

Subscriptions and Donations thankfully received by the Treasurer, or Miss ROSE E. WHYTE, the Secretary, at the Hospital. [146

THE HOSPITAL FOR DISEASES OF THE SKIN,

70-71, BLACKFRIARS ROAD, S.E.

Telephone: Hop 1021.

ESTABLISHED 1841.

Patrons—HER MOST GRACIOUS MAJESTY QUEEN ALEXANDRA.
Treasurer—THE RT. HON. THE LORD MORRIS, P.C., K.C.M.G.

This Hospital is the oldest in London specially devoted to the study and treatment of diseases of the skin. It is thoroughly equipped with the most modern therapeutic appliances.

Unfortunately, the present position of the finances of the Hospital will not permit the re-opening of the In-Patient Department, which was closed owing to lack of funds. Donations and more Annual Subscriptions are urgently desired.

The practice of the Hospital is open to all qualified medical practitioners and senior students.

Since the foundation of the Hospital in 1841, over 559,000 patients have been treated.

Patients are required to contribute towards the funds of the Hospital according to their means, and should attend daily at 1.30 p.m., or on Fridays at 6 p.m.

This Hospital is a centre for the treatment of Venereal Diseases under the London County Council scheme.

FREDERICK HAYTER, *Secretary*.

[152

LONDON CITY MISSION

Instituted 1835.

250 Agents Employed.

The Society exists for the social and spiritual uplift of the millions of London, chiefly the poor and the artisan classes. Besides preaching the Gospel from house to house, and in Hospitals and Poor Law Institutions, the Missionaries visit the great centres of industry—Government works, docks and wharves, rail and goods yards, public offices, and wherever the masses foregather, either for business or pleasure—teaching the principles of righteousness and truth, and urging their application to daily life and conduct.

£1,000 required week by week for the maintenance of the Society's daily operations among the poor and working classes of the Capital.

Treasurer: W. G. BRADSHAW, Esq., C.B.E. *Secretary*: THE REV. W. P. CARTWRIGHT, M.A.

Bankers: BARCLAYS BANK, LTD.

Headquarters: MISSION HOUSE, 3, BRIDEWELL PLACE, LONDON, E.C. 4.

London Lock Hospital and Home.

Patron - - H.M. THE KING.

Founded 1746, this Special Hospital has for 177 years devoted all its energies to the treatment of venereal diseases. Thousands of young women and girls from all parts of the kingdom have been relieved of their bodily suffering and helped to regain their self-respect, and thereby enabled to make a fresh start in life.

£12,000 REQUIRED ANNUALLY.

Annual Subscriptions, Donations and Legacies are earnestly pleaded for, and will be gratefully received by the Hon. Treasurers,

LORD KINNAIRD, K.T., and J. F. W. DEACON, Esq., M.A., D.L., J.P.,
or by **HY. J. EASON, Secretary.**

Offices: 283, HARROW ROAD, LONDON, W. 9.

THE NATIONAL BENEVOLENT INSTITUTION,

FOUNDED BY THE LATE PETER HERVÉ.

ESTABLISHED 1812. INCORPORATED BY ROYAL CHARTER.

Under the Patronage of His Most Excellent Majesty KING GEORGE V.

Treasurer—ROBERT W. DIBDIN, ESQ., J.P.

This Institution grants Annuities of £21 and £25 to distressed members of the Upper and Middle Classes of Society who have attained the age of 50 years and upwards.

The Pensioners are elected half-yearly, in May and November, by the votes of the Life Governors and Subscribers.

The sum disbursed in Pensions now amounts to over £16,000 per annum.

The total number of aged Persons who have been supported by the Institution is **Three Thousand Nine Hundred and Forty-Seven**, the gross sum distributed to them up to the present exceeding **£867,700.**

Subscriptions from 5s. and upwards will be thankfully received at the Office, and any further information given between the hours of 10 and 4 daily; Saturdays, 10 and 2.

Office—65, SOUTHAMPTON ROW, LONDON, W.C.1.

HENRY C. LATREILLE, Secretary. [164]

The N.S.P.C.C.

Incorporated by Royal Charter.

PREVENTIVE. REFORMATIVE. NOT INQUISITORIAL.

Seeks to secure to every neglected child in England, Wales, and Ireland, proper treatment, proper food, proper clothing in its own home by its own parents. 92,364 children helped last year. Over 3,167,153 helped since the foundation of the Society.

LEGACIES HAVE OFTEN RELIEVED THE SOCIETY OF GREAT DIFFICULTIES

Cheques and Orders should be payable to the Hon. Treasurer, Sir G. WYATT TRUSCOTT, Bart., or to the Director, ROBERT J. PARR, O.B.E., The National Society for the Prevention of Cruelty to Children, Central Office, Leicester Square, London, W.C.2.

ROYAL BLIND PENSION SOCIETY

Patron—HIS MAJESTY THE KING.

Honorary Secretaries—MESSRS. GEORGE POCCOCK AND PERCY R. POCCOCK.

This Society grants Pensions to the Blind Poor at their own homes in sums ranging from 10s. to 25s. per month. There are upwards of 1,200 pensioners, residing in various parts of the Kingdom, among whom about **£10,000** is annually distributed.

To be eligible, applicants must be totally blind, above 21 years of age, of good moral character, and in receipt of income not exceeding £30, if single, and £52 if married. No distinction is made in regard to sex or creed; nor as the receipt of parish relief a disqualification.

Application must be made on the printed forms provided by the Society.

Subscribers of 10s. 6d. annually, or Donors of Five Guineas, are entitled to One Vote at every election, and multiples thereof in proportion.

Contributions will be gratefully received by the Treasurer, or by the BANK OF ENGLAND, or by Barclays Bank.

277, SOUTHWARK BRIDGE ROAD, LONDON, S.E.1.

W. ELLIOTT TERRY, Secretary. [31]

WIRELESS TELEPHONY SETS FREE

immense possibilities for the benefit of mankind. Recently it prevented an accident to an aviator. But there are some things it cannot do and which you must do instead if they are to be done at all. We refer particularly to the care of orphan children. By helping this Orphanage you enable us to give a home to fatherless and needy children, who are thus saved from suffering and given a useful start in life. These benefits are not restricted to one class of children: they are distributed

BROADCAST

to orphan children all over the Country. "There's a wideness in God's mercy, like the wideness of the sea." He needs your help for His homes for little children. Please send us a gift to-day to assist in the maintenance of the 318 boys and girls now in our home.

Subscriptions, Donations and Legacies most urgently needed.

THE ORPHAN WORKING SCHOOL and ALEXANDRA ORPHANAGE.

Treasurer: The Rt. Hon. LORD MARSHALL, P.C., K.C.V.O.

Your Independence

*Retired and free from
financial anxiety*

NOW is the time to make provision for retirement or old age by taking up an Investment Assurance Policy on the safe and sound plan of the "British Dominions." This ideal method affords full financial protection (for total amount assured) to your dependents during the whole period you are accumulating the fund, which is payable to you in cash together with added profits when you reach the age of 55 or any other pre-determined date. The contract also ensures the advantage of a liberal cash surrender value; while a substantial rebate can be deducted from Income Tax in respect of premiums paid.

FIRE INSURANCE

Every prudent person should secure a cover that is generous in terms, wide in scope, prompt in settlement, unequivocal in conditions. The Fire Policies of the "British Dominions" fully meet these requirements and are issued at attractive rates—the lowest possible consistent with financial security. In writing for prospectuses please state whether required for Business premises or Private dwellings.

*Small causes
bring disaster*

ACCIDENTS & MOTOR RISKS

Personal Accident Policies, covering practically every conceivable risk, are issued at attractive rates for short periods or per annum. The "B.D." Empire Motor Policies for Private Cars and Commercial Vehicles afford the widest possible cover at lowest rates and provide many special and

advantageous features. Full particulars in prospectuses.

ALL CLASSES OF INSURANCE BUSINESS TRANSACTED

Annuities, Burglary, Children's Endowments, Contingency, Disease and Sickness, Electrical and other Machinery, Lifts, Gas Plant, Employers' Liability, Fidelity Guarantee, Fire, Indemnity, Leasehold Redemption, Life, Loss of Profits, Marine, Marriage, Motor Car, "Pluvius" Weather Policies, Personal Accident, Plate Glass, Public Liability, Securities in Transit, Sprinkler Leakage. The "ALL-IN" Policy for Houseowners and Householders. Special Insurances for Women.

Special Insurances for Farmers.
